| QUESTIONS.                                                | ANSWERS.                      |
|-----------------------------------------------------------|-------------------------------|
| 1. State and county in which the manufactory is situated? | 1. Erie county, Pennsylvania. |

## DOCUMENT 14.—No. 242—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Manufacture leather and shoes.                                |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established in 1824; joint stock.                             |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Two thousand dollars.                                         |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Three hundred dollars.                                        |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Profit increased in consequence of a increased demand.        |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                     | 12. Five men employed.                                           |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. Ten hours a day, the whole year.                             |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. Mostly at the manufactory.                                   |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                           | 17. They do not.                                                 |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Generally in the neighborhood of the manufactory.            |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. None exported.                                               |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. For cash in part, three months' credit, and country produce. |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Situated in Erie county, Pennsylvania.                              |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Shoe and leather factory.                                           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Amount of capital employed per year, general aggregate, \$3,000.    |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. The rate of profit on the capital I should estimate at 20 per cent. |

## DOCUMENT 14.—No. 244.

*J. C. Strawn's Leather Manufactory, Fayette County, West Pennsylvania.*

| QUESTIONS.                                                                                                                 | ANSWERS.                                            |
|----------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                  | 1. Fayette county, Pennsylvania.                    |
| 2. Kind or description of the manufactory?                                                                                 | 2. Leather.                                         |
| 3. Capital invested in ground and buildings?                                                                               | 3. One thousand four hundred dollars.               |
| 4. Average amount in materials, and in wages for the purchase of materials and payment of wages?                           | 4. One thousand six hundred dollars.                |
| 5. Quantity and value of different kinds of materials used, distinguishing between foreign products and domestic products? | 8. Cost \$850; all domestic.                        |
| 6. Number of men, women and children employed, and average wages of each class?                                            | 10. Two men, 12 months, \$15 per month.             |
| 1. How many hours a day employed, and at what portion of the year?                                                         | 11. Eight hours per day.                            |
| 2. Whether the manufactures find a market at the manufactory? If not, how far they sent to a market?                       | 12. At home and Pittsburgh, Pennsylvania; 30 miles. |
| 4. Where are the manufactures consumed?                                                                                    | 14. In this State.                                  |
| 6. Whether the manufacture is sold by manufacturer for cash? and, if on credit, what credit? if bartered, for what?        | 16. One half cash, and the balance trade.           |
| 8. Amount of capital?                                                                                                      | 20. Three thousand eight hundred dollars.           |
| 1. Average rate of wages?                                                                                                  | 21. Fifteen dollars per month.                      |

This is a correct statement of my tan-yard, this 12th April, 1832.

J. C. STRAWN.

|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                   | 1. Fayette county, Pennsylvania.                                                 |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                        | 2. Leather factory; by water power.                                              |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                     | 3. Established in 1812 by the present occupant.                                  |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                             | 4. Say \$7,000 stock, ground and buildings.                                      |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                             | 5. Stock.                                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                       | 9. Say 600 hides and 800 skins of different kinds, varying in price and quality. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                             | 10. Domestic.                                                                    |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                            | 12. 5 hands, including boys; wages per month \$15 for journeymen.                |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                            | 13. Twelve hours per day.                                                        |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                             | 15. Two horses.                                                                  |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                   | 16. Market at home.                                                              |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                  | 17. No competition.                                                              |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. At home.                                                                     |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                    | 19. Not exported.                                                                |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. For cash, and exchanged for hides, on credit.                                |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. About the same as when first established.                                    |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                        | 22. Upper and skins by the piece, according to the size and quality.             |

The above is a true statement of my tannery. April 11, 1832.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                    |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Fayette county, Pennsylvania.                                            |
| 2. Kind or description of the manufactory?                                                                                            | 2. Tannery.                                                                 |
| 3. Capital invested in ground and buildings?                                                                                          | 3. About one thousand eight hundred dollars.                                |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. About one thousand two hundred dollars.                                  |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. About forty per cent.                                                    |
| 6. Cause of the increase (or decrease, as the case may be,) of profit?                                                                | 6. Because imported leather is low.                                         |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. The Spanish hides compose a principal part of stock.                     |
| 8. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?        | 8. About three-fourths domestic hides, the balance Spanish.                 |
| 10. Number of men, women, and children, employed, and average wages of each class?                                                    | 10. Two hands, at \$10 per month each.                                      |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Twelve months.                                                          |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. At manufactory, and Pittsburgh, twenty-six miles.                       |
| 14. Where are the manufactures consumed?                                                                                              | 14. Mostly in the immediate neighborhood.                                   |
| 16. Whether the manufactures are sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?          | 16. Sold for cash, at different credits, and bartered for farmers' produce. |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 17. Sole leather from 24 to 30 cents per pound; other kinds in proportion.  |
| 21. Average rate of wages?                                                                                                            | 21. From 12 to \$15 per month.                                              |

I do assert this to be as correct statement as my judgment can give to the above queries.

JAMES, for E. COLEMAN.

MERRITTSTOWN, April 17th, 1832.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|
| 14. Where are the manufactures consumed?                                                                                                   | 14. In Jefferson county.                                     |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. None exported.                                           |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. For cash, and at the prices in answer to question No. 7. |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Are the same as above.                                   |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. No duty necessary.                                       |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Manufactory has been but one year in operation.          |
| 20. Amount of capital?                                                                                                                     | 20. Seven hundred dollars.                                   |

Yours, respectfully,

DAVID HENK.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Pennsylvania, Jefferson county.                                       |
| 2. Kind or description of the manufactory?                                                                                            | 2. Tannery.                                                                       |
| 3. Capital invested in ground and buildings?                                                                                          | 3. One thousand dollars.                                                          |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Five hundred dollars.                                                          |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. One per cent.                                                                  |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. 200 sides sole, of the value of \$500; 200 sides upper, of the value of \$600. |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Two men, at \$25 each per month.                                              |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Eight hours per day, and ten months per year.                                 |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Partly at the tannery, and the rest in the adjoining counties.                |
| 14. Where are the manufactures consumed?                                                                                              | 14. In this and the adjoining counties.                                           |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 15. None exported.                                                                |

| Kind or description of the manufactory?                                                                                       | 2. Tannery.                                                                             |
| Capital invested in ground and buildings?                                                                                     | 3. Two hundred dollars.                                                                 |
| Average amount in materials, and in cash for the purchase of materials and payment of wages?                                  | 4. One hundred dollars.                                                                 |
| Annual rate of profit on the capital invested?                                                                                | 5. Fifty per cent.                                                                      |
| Cause of the increase (or decrease, as case may be) of profit?                                                                | 6. The quantity of leather imported into the country causes a great decrease of profit. |
| Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each? | 7. Fifty hides: 25 hides sole, value each \$3; 25 of upper, value of each \$3.          |
| Number of men, women, and children employed, and average wages of each class?                                                 | 10. One man at \$12 per month.                                                          |
| How many hours a day employed; and at portion of the year?                                                                    | 11. Twelve.                                                                             |
| Whether the manufactures find a market at the manufactory? If not, how far they sent to a market?                             | 12. Market at the manufactory.                                                          |
| Where are the manufactures consumed?                                                                                          | 14. In the immediate vicinity.                                                          |
| Whether any of the manufactures are exported to foreign countries? and if so, where?                                          | 15. None exported.                                                                      |
| Whether the manufacture is sold by manufacturer for cash? and if on credit, what credit? if bartered, for what?               | 16. For cash.                                                                           |
| The prices at which the manufactures have been sold by the manufacturer since the establishment?                              | 17. About the same as in answer to question No. 7.                                      |
| What has been the rate of your profits, annually, for the last three years?                                                   | 19. Fifty per cent.                                                                     |
| Amount of capital?                                                                                                            | 20. Three hundred dollars.                                                              |
| Average rate of wages?                                                                                                        | 21. Twelve dollars.                                                                     |

Yours, respectfully,

CHRISTOPHER BARRY.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mercer county, Pennsylvania.                                              |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Leather manufactory.                                                      |
| 3. Capital invested in ground and buildings?                                                                                               | 3. One thousand dollars.                                                     |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. One thousand two hundred dollars.                                         |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Twenty-five per cent. on capital employed.                                |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. \$800, all domestic hides.                                                |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Two men, average wages \$23.                                             |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. 14 hours; 11 months.                                                     |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                      |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. It does.                                                                 |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity.                                                         |
| 15. Whether any of the manufactures are exported to foreign countries; and if so, where?                                                   | 15. None exported.                                                           |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Half cash; 3 months' credit on part, and balance bartered for hides, &c. |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Sole leather 31½ cents per lb; wags do. \$2 50 per side; calf-skins \$2. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. The duty should not be reduced.                                          |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. Two hundred dollars.                                                     |
| 20. Amount of capital?                                                                                                                     | 20. Eight hundred dollars employed.                                          |
| 21. Average rate of wages?                                                                                                                 | 21. Two hundred and fifty dollars.                                           |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. \$600 worth domestic; no foreign.                                                                         |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. One man at \$175 per year.                                                                               |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. 11 hours, the whole year.                                                                                |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                                                      |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. They do.                                                                                                 |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity of the manufactory.                                                                      |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. Not exported.                                                                                            |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Sold on a credit of one year, and bartered for hides and the produce of the country.                     |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Sole leather 28 cents per lb., upper leather \$2 44 per side, calf skins at from \$1 50 to \$2 per skin. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A higher duty than the present is not necessary, but it is believed that a reduction would be injurious. |
| 20. Amount of capital?                                                                                                                     | 20. \$1,500.                                                                                                 |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                              |
|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Mercer county, Pennsylvania.                                                       |
| 2. Kind or description of the manufactory?                                                                                            | 2. Leather manufactory.                                                               |
| 3. Capital invested in ground and buildings?                                                                                          | 3. \$200.                                                                             |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. \$500.                                                                             |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. 25 per cent.                                                                       |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Sole leather 31½ per lb., upper 50 cents per lb., calf skins from 75 cents to \$2. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. Raw materials about \$275; no foreign.                                             |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                    |
|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Mercer county, Pennsylvania.                                                             |
| 2. Kind or description of the manufactory?                                                                                            | 2. Leather manufactory.                                                                     |
| 3. Capital invested in ground and buildings?                                                                                          | 3. \$500.                                                                                   |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. \$1,000.                                                                                 |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. 25 per cent.                                                                             |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Sole leather 31½ per lb., upper leather \$30 per dozen sides, calf-skins \$21 per dozen. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. \$600 worth of hides and skins.                                                          |
| 10. Number of men, women and children employed, and average wages of each class?                                                      | 10. One man and one boy; \$18 per month for the man, and \$10 per month for the boy.        |
| 11. How many hours a day employed, and at what portion of the year?                                                                   | 11. 10 hours per day the whole year.                                                        |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they sent to a market?                                 | 12. At the manufactory.                                                                     |
| 14. Where are the manufactures consumed?                                                                                              | 14. In the vicinity of the manufactory.                                                     |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                             | 15. None exported.                                                                          |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. Part on a credit of six months, part bartered for stock and the produce of the country. |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mercer county, Pennsylvania.                                                                                     |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Leather manufactory.                                                                                             |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Two thousand dollars.                                                                                            |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. One thousand five hundred dollars.                                                                               |
| 5. Annual rates of profit on the capital invested?                                                                                         | 5. About twenty-five per cent.                                                                                      |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. About \$100 worth of foreign hides; about \$800 for domestic hides and skins; \$300 for oil, bark, and blacking. |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Two men at \$13 per month each.                                                                                 |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. Fourteen hours, eleven months.                                                                                  |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                                                             |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. They do, but not to a great extent.                                                                             |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity of the manufactory.                                                                             |
| 15. Whether any of the manufactures are exported to foreign countries; and if so, where?                                                   | 15. They are not exported.                                                                                          |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Half for cash, a part on a credit of six months, and a part bartered for hides, bark &c. &c.                    |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Sole leather 31½ cents per pound; upper leather \$2.50 per side; calf skins at from \$1.75 to \$2.25 per skin.  |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A high duty.                                                                                                    |
| 20. Amount of capital?                                                                                                                     | 20. About \$3,000.                                                                                                  |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mercer county, Pennsylvania.                                                                                                                |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Leather manufactory.                                                                                                                        |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Four hundred dollars.                                                                                                                       |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. Six hundred and thirty-eight dollars.                                                                                                       |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Twenty-five per cent.                                                                                                                       |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Sole leather is worth 31½ cents per lb., upper from \$2 to \$3.25 per side, calf skins \$1.50 to \$3; horse leather \$1 to \$1.50 per side. |
| 8. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?             | 8. Three hundred and fifty dollars; all domestic.                                                                                              |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Two men at \$12 per month.                                                                                                                 |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. Ten hours, ten months.                                                                                                                     |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                                                                                        |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity of the manufactory.                                                                                                        |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. Not exported.                                                                                                                              |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, what credit? if bartered, for what?                    | 16. One-third for cash, one-third on a credit of six months, and one-third bartered for hides and country produce.                             |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A high duty.                                                                                                                               |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. About \$400. Sole leather 31½ cents per pound; upper 50 cents per pound; calf skins from \$1 to \$2 50. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. About \$200 of domestic; no foreign.                                                                    |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. One man.                                                                                               |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Ten hours; eight months.                                                                               |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                                                    |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity of the manufactory.                                                                    |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. On a credit of six months, and bartered for stock for the manufactory and the produce of the country.  |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A high duty.                                                                                           |

## DOCUMENT 14.—No. 261.

*William Dickson's Leather Manufactory, Newcastle, Mercer County, West Pennsylvania.*

| QUESTIONS.                                                                                                                     | ANSWERS.                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                      | 1. Mercer county, Pennsylvania.                                                                              |
| 2. Kind or description of the manufactory?                                                                                     | 2. Leather manufactory.                                                                                      |
| 3. Capital invested in ground and buildings?                                                                                   | 3. Two thousand dollars.                                                                                     |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                | 4. One thousand five hundred dollars.                                                                        |
| 5. Annual rate of profit on capital invested?                                                                                  | 5. About 25 per cent. profit.                                                                                |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products? | 8. About \$100 worth of foreign hides about \$800 for domestic hides, and \$300 for oil, bark, and blacking. |
| 10. Number of men, women, and children employed, and average wages of each class?                                              | 10. Two men, at \$13 per month.                                                                              |
| 11. How many hours a day employed, and what portion of the year?                                                               | 11. Fourteen hours, 11 months.                                                                               |
| 12. Whether the manufactures find a market at the manufactory? If not, how far are they sent to market?                        | 12. At the manufactory.                                                                                      |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?     | 13. They do, but not to a great extent.                                                                      |
| 14. Where are the manufactures consumed?                                                                                       | 14. In the vicinity of the manufactory.                                                                      |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                       | 15. They are not exported.                                                                                   |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mercer county, Pennsylvania.                                                                                                |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Leather manufactory.                                                                                                        |
| 3. Capital invested in ground and building?                                                                                                | 3. Three hundred dollars.                                                                                                      |
| 4. Average amount in materials, and in for the purchase of materials and payment of wages?                                                 | 4. Three hundred dollars.                                                                                                      |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Twenty-five per cent.                                                                                                       |
| 6. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of kind?           | 7. About four hundred dollars; sole leather 31½ cents per pound; upper 50 cents per pound; calf skins from \$1 to \$2 50 each. |
| 7. Quantity and value of different kinds of materials used; distinguishing between foreign products and domestic products?                 | 8. About two hundred dollars of domestic; no foreign.                                                                          |
| 8. Number of men, women and children employed, and average wages of each class?                                                            | 10. 1 man.                                                                                                                     |
| 9. How many hours a day employed, and portion of the year?                                                                                 | 11. 10 hours, 8 months.                                                                                                        |
| 10. Whether the manufactures find a market at the manufactory? If not, how far are sent to a market?                                       | 12. At the manufactory.                                                                                                        |
| 11. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity of the manufactory.                                                                                        |
| 12. Whether the manufacture is sold by manufacturer for cash? and if on credit, hat credit? if bartered, for what?                         | 16. On a credit of six months, and bartered for stock for the manufactory, and the produce of the country.                     |
| 13. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A high duty.                                                                                                               |

JOHN STEVENSON.

*Leather Manufactory, Mercer County, Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Mercer county, Pennsylvania.                                                                           |
| 2. Kind or description of the manufactory?                                                                                            | 2. Leather manufactory.                                                                                   |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Two thousand dollars.                                                                                  |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. One thousand five hundred dollars.                                                                     |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Seventy-five per cent.                                                                                 |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. 2,000 dollars; upper \$5 30, sides \$3, sole \$3 20, sides \$3 50 or 31½ cr. per lb. calf-skin \$1 50. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. Hides and bark, oil, &c., all domestic \$1,300; Spanish hides \$290.                                   |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Three men.                                                                                            |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Twelve hours all the year.                                                                            |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. In the vicinity, and at Pittsburgh, 8 miles.                                                          |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | 13. No.                                                                                                   |
| 14. Where are the manufactures consumed?                                                                                              | 14. Vicinity, and at Pittsburgh.                                                                          |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 15. No.                                                                                                   |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. Some for cash, part credit 6 months, and 6 years, and bartered for country produce, hides, bark, &c.  |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 17. Upper \$2 50 per side; sole 31½ per lb.                                                               |

|--------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| Average amount in materials, and in for the purchase of materials and pay-<br>ment of wages?                                                           | 4. About \$1,200.                                                               |
| Annual rate of profit on the capital in-<br>vested?                                                                                                    | 5. About \$500.                                                                 |
| Cause of the increase (or decrease, as<br>case may be,) of profit?                                                                                     | 6. Little or no change.                                                         |
| Amount of articles annually manufac-<br>tured since the establishment of the manu-<br>factory? Description, quality, and value of<br>each kind?        | 7. Cannot answer.                                                               |
| Quantity and value of different kinds<br>raw materials used; distinguishing be-<br>tween foreign products and domestic pro-<br>ducts?                  | 8. Answered, in part, in 4th query                                              |
| Cost in the United States of similar ar-<br>ticles of manufacture imported from abroad,<br>from what countries?                                        | 9. Cannot answer.                                                               |
| 10. Number of men, women, and chil-<br>dren employed, and average wages of each<br>sex?                                                                | 10. Generally two men.                                                          |
| 1. How many hours a day employed; and<br>at portion of the year?                                                                                       | 11. No particular time; generally the whole<br>day, except winter.              |
| 2. Whether the manufactures find a mar-<br>ket at the manufactory? If not, how far they<br>sent to a market?                                           | 12. Market at the factory.                                                      |
| 3. Whether foreign articles of the like<br>kind enter into competition with them at<br>the place of sale; and to what extent?                          | 13. No competition by foreign articles,<br>except some brought from York State. |
| 4. Where are the manufactures consumed?                                                                                                                | 14. In the neighborhood.                                                        |
| 5. Whether any of the manufactures are<br>exported to foreign countries? and if so,<br>where?                                                          | 15. None.                                                                       |
| 6. Whether the manufacture is sold by<br>the manufacturer for cash? and if on credit,<br>what credit? if bartered, for what?                           | 16. Sold for cash: sometimes bartered for<br>hides and grain, or other trade.   |
| 7. The prices at which the manufactures<br>have been sold by the manufacturer since the<br>establishment?                                              | 17. Sole leather at 31½ cents per lb.; for<br>the upper about \$2 50 per side.  |
| 8. What rate of duty is necessary to en-<br>able the manufacturer to enter into competi-<br>tion in the home market with similar articles<br>imported? | 18. None required.                                                              |
| 9. What has been the rate of your pro-<br>fit annually, for the last three years?                                                                      | 19. We calculate on about 50 per cent.<br>profit, expense deducted.             |
| 10. Amount of capital?                                                                                                                                 | 20. About \$1,000.                                                              |
| 11. Average rate of wages?                                                                                                                             | 21. From \$150 to \$200 per year.                                               |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mercer county, Pennsylvania.                                                                                                             |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Leather manufactory.                                                                                                                     |
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$600.                                                                                                                                   |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. \$800.                                                                                                                                   |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. 25 per cent.                                                                                                                             |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Sole leather is worth 3½ cents per pound; upper, from \$2 to \$3 25, per side; calf-skins, \$1 50 to \$3; horse, \$1 to \$1 50 per side. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. \$500; all domestic.                                                                                                                     |
| 10. Number of men, women and children employed, and average wages of each class?                                                           | 10. 2 men at \$15 per month.                                                                                                                |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. 10 hours, 10 months.                                                                                                                    |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                                                                                     |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity of the manufactory.                                                                                                     |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. Not exported.                                                                                                                           |
| 16. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                | 16. One-third for cash; one-third on credit of 6 months; one-third bartered for tools and country produce.                                  |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A high duty.                                                                                                                            |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 9. Quantity and value of different kinds raw materials used; distinguishing between eign products and domestic products?                   | 8. \$600 domestic; no foreign.                                                                               |
| 10. Number of men, women and children employed, and average wages of each class?                                                           | 10. 1 man at \$175 per year.                                                                                 |
| 11. How many hours a day employed, and at portion of the year?                                                                             | 11. 11 hours; the whole year.                                                                                |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they sent to a market                                       | 12. At the manufactory.                                                                                      |
| 13. Whether foreign articles of the like kind enter into competition with them at a place of sale; and to what extent?                     | 13. They do.                                                                                                 |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity of the manufactory.                                                                      |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. Not exported.                                                                                            |
| 16. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, what credit? if bartered, for what?                   | 16. Sold on a credit of 6 months, and bartered for hides and country produce.                                |
| 17. The prices at which the manufactures have been sold by the manufacturer since establishment?                                           | 17. Sole leather 28 cents per pounds; upper, \$2 44 per side; calf-skins, \$1 75 per skin.                   |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A higher duty than the present is not necessary; but it is believed that a reduction would be injurious. |
| 20. Amount of capital?                                                                                                                     | 20. \$1,500.                                                                                                 |

| QUESTIONS.                                                                                                                  | ANSWERS.                                     |
|-----------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                   | 1. Mercer county, Pennsylvania.              |
| 2. Kind or description of the manufactory?                                                                                  | 2. Leather manufactory.                      |
| 3. Capital invested in ground and buildings?                                                                                | 3. One thousand dollars.                     |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                             | 4. Seven hundred and fifty dollars.          |
| 5. Annual rate of profit on the capital invested?                                                                           | 5. Twenty-five per cent.                     |
| 6. Quantity and value of different kinds raw materials used; distinguishing between foreign products and domestic products? | 6. Six hundred dollars domestic; no foreign. |
| 7. Number of men, women and children employed, and average wages of each class?                                             | 10. One man at \$ 175 per year.              |
| 8. How many hours a day employed; and at portion of the year?                                                               | 11. Eleven hours, the whole year.            |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| 12. Whether the manufactures find a market at the manufactory? If not, how far, they are sent to a market?                                 | 12. At the manufactory.                                                                                         |
| 13. Whether foreign articles of the like kinds enter into competition with them, at such place of sale; and to what extent?                | 13. They do.                                                                                                    |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity of the manufactory.                                                                         |
| 15. Whether any of the manufactures are exported to foreign countries? And if so, where?                                                   | 15. Not exported.                                                                                               |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Sold on a credit of one year, and bartered for hides and the produce of the country.                        |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Sole leather 28 cents per pound; up per \$2 44 per side; calf-skins \$1 75 per skin.                        |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A higher duty than the present is not necessary, but it is believed that a reduction would prove injurious. |
| 20. Amount of capital?                                                                                                                     | 20. Fifteen hundred dollars.                                                                                    |

## DOCUMENT 14.—No. 268.

*Lewis Carey's Tannery, Sharon, Mercer County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                            |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Mercer county, Pennsylvania.                                                                     |
| 2. Kind, or description of the manufactory?                                                                                           | 2. Leather manufactory.                                                                             |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Two hundred dollars.                                                                             |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Five hundred dollars.                                                                            |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Twenty-five per cent.                                                                            |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Sole leather 31½ cents per lb.; upper 50 cents per lb.; calf-skins from 75 cents to two dollars. |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. Raw materials \$275; no foreign.                                                                 |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. One man, one boy; the man at \$15 per year, the boy at \$7 50 per year.                         |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Eight hours, ten months.                                                                        |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. At the manufactory.                                                                             |

*Andrew Bowman's Tannery, Venango County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                     |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Venango county, Pennsylvania.                                                                                             |
| 2. Kind or description of the manufactory?                                                                                            | 2. Tanyard and currying shop.                                                                                                |
| 3. Capital invested in ground and buildings?                                                                                          | 3. One thousand dollars.                                                                                                     |
| 4. Average amount in materials, and in wages for the purchase of materials and payment of wages?                                      | 4. Two thousand dollars.                                                                                                     |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Three hundred dollars.                                                                                                    |
| 6. Cause of the increase (or decrease, as case may be) of profit?                                                                     | 6. Decrease of profit, owing to the scarcity of cash in the country.                                                         |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. 200 sides of sole, 250 upper and harness at \$3 per side, amount \$1,250; sixty calf-skins at \$1.50, \$90.               |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. Between three and four hundred hides and skins; beef hides five cents per lb., calf eight; no Spanish hides manufactured. |
| 9. Number of men, women, and children employed, and average wages of each class?                                                      | 10. Three men and a boy, or two, most of the time.                                                                           |
| 1. How many hours a day employed, and at portion of the year?                                                                         | 11. Nine hours for three-fourths of the year, more or less.                                                                  |
| 2. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                              | 12. Sell all at the place manufactured.                                                                                      |
| 3. Whether foreign articles of the like kind enter into competition with them at the place of sale; and to what extent?               | 13. Spanish sole sometimes vended here lower than we can afford country sole.                                                |
| 4. Where are the manufactures consumed?                                                                                               | 14. In the county of Venango principally.                                                                                    |
| 5. Whether any of the manufactures are exported to foreign countries? and if so, where?                                               | 15. None exported.                                                                                                           |
| 6. Whether the manufacture is sold by manufacturer for cash? and if on credit, what credit? if bartered, for what?                    | 16. Not much for cash, (grain after harvest, &c. &c.)                                                                        |

*Shoe and Boot Manufactory, Armstrong County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. State of Pennsylvania, Armstrong co.                     |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Shoe and boot.                                           |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Forty dollars.                                           |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. One thousand dollars.                                    |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. \$100, or 10 per cent.                                   |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Hemp thread \$75 per annum; <i>knives</i> \$6, domestic. |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Two men, at \$5 per week.                               |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. 12 hours per day, and all the year.                     |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to market?                                    | 12. Market at the manufactory.                              |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. To the fullest extent.                                  |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the immediate vicinity.                              |
| 16. Whether the manufactory is sold by the manufacturer for cash? and if on credit, at what credit? it bartered, for what?                 | 16. For cash; \$2 50 for booters, and \$2 25 for shoes, &c. |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Have always been the same.                              |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. 25 cents per pair on shoes, and \$1 9 on booters.       |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Thirty per cent.                                        |
| 20. Amount of capital?                                                                                                                     | 20. Is three hundred dollars.                               |

Yours, respectfully,

PATRICK SHERREY.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Beaver county, Pennsylvania.                                                                                                   |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Boot and shoe manufactory.                                                                                                     |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Three hundred dollars.                                                                                                         |
| 4. Annual rate of profit on the capital invested?                                                                                          | 5. Twelve per cent.                                                                                                               |
| 5. Cause of the increase, (or decrease, as case may be,) of profit?                                                                        | 6. Cause of decrease, foreign importation.                                                                                        |
| 6. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. 100 pairs of boots, and 1,000 pairs of shoes; average value of boots, 6 dollars; shoes, 2 dollars.                             |
| 7. Quantity and value of different kinds of materials used; distinguishing between foreign products and domestic products?                 | 8. 1,600 lbs. sole leather; 28 dozen calf-skins and upper leather; sole leather, 28 cts. per lb.; calf-skins, 24 dollars per doz. |
| 8. Number of men, women, and children employed, and average wages of each class?                                                           | 10. 5 men employed, each at 15 dollars per month; 1 woman at 4 dollars per month.                                                 |
| 9. How many hours a day employed, and at portion of the year?                                                                              | 11. Average time employed, 12 hours of the 24.                                                                                    |
| 10. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. They find a market the manufactory.                                                                                           |
| 11. Whether foreign articles of the like kind enter into competition with them at the place of sale; and to what extent?                   | 13. Foreign articles, of the same kind enter into competition, but to what extent is not exactly known.                           |
| 12. Where are the manufactures consumed?                                                                                                   | 14. In the county above named.                                                                                                    |
| 13. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None of the manufactures are exported.                                                                                        |
| 14. Whether the manufacture is sold by the manufacturer for cash? and if on credit, what credit? if bartered, for what?                    | 16. One-fourth of the articles manufactured sold for cash; the balance on credit of six to twelve months.                         |
| 15. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. The average price of boots has been as high as eight dollars per pair; of shoes, two dollars and fifty cents per pair.        |
| 16. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A duty that will amount to a prohibition.                                                                                     |
| 17. What has been the rate of your profits, usually, for the last three years?                                                             | 19. Profits per annum, about four hundred dollars.                                                                                |
| 18. Amount of capital.                                                                                                                     | 20. Two thousand dollars.                                                                                                         |
| 19. Average rate of wages?                                                                                                                 | 21. Average wages about fifteen dollars.                                                                                          |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Beaver county, State of Pennsylvania.                                                                                                         |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Boot and shoe manufactory.                                                                                                                    |
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$2,000.                                                                                                                                      |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. \$1,000.                                                                                                                                      |
| 5. Annual rate of profit on capital invested?                                                                                              | 5. 12 per cent.                                                                                                                                  |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. Decreased because of the New England competition.                                                                                             |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. \$2,000 Spanish hides, home manufactured, and other necessary foreign materials; \$1,000 of home manufactured leather for this country hides. |
| 10. Number of men, women and children employed, and average wages of each class?                                                           | 10. 4 men; 2 boys; 2 women.                                                                                                                      |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. 12 hours throughout the year.                                                                                                                |
| 12. Whether the manufactures finds a market at the manufactory? If not, how far they are sent to a market?                                 | 12. Sold at the manufactory.                                                                                                                     |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. Foreign articles do not affect them.                                                                                                         |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In Beaver county.                                                                                                                            |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. They are not exported from this county.                                                                                                      |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. $\frac{1}{2}$ cash; $\frac{1}{2}$ credit; $\frac{1}{2}$ trade.                                                                               |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A duty of 20 per cent. ad valorem.                                                                                                           |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. 25 per centum.                                                                                                                               |
| 20. Amount of capital?                                                                                                                     | 20. \$1,000.                                                                                                                                     |
| 21. Average rate of wages?                                                                                                                 | 21. Men, \$6.                                                                                                                                    |

*P. Sharpneck, Shoemaker, Jefferson, Greene County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Jefferson, Greene county, Pennsylvania.                                                                     |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Boot and shoe manufactory.                                                                                  |
| 3. Capital invested in ground and buildings?                                                                                               | 3. One thousand dollars.                                                                                       |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. Two hundred dollars.                                                                                        |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Fifty per cent.                                                                                             |
| 6. Cause of the increase, (or decrease, as the case may be) of profit?                                                                     | 6. No change in business or profits.                                                                           |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Twenty pair boots annually, worth \$5 per pair; two hundred and fifty pair shoes annually, at \$2 per pair. |
| 8. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?             | 8. About six hundred dollars' worth of leather; no foreign materials.                                          |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                             | 9. No articles or materials imported.                                                                          |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. No assistance employed.                                                                                    |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Work about 12 hours each day, and all seasons of the year.                                                 |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. Find a market for all at the manufactory.                                                                  |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. No foreign articles offered here for sale.                                                                 |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the State of Pennsylvania.                                                                              |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None exported.                                                                                             |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Sold for cash and produce, as we can agree.                                                                |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Answered in the 7th answer.                                                                                |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. There being none imported, no duty can be laid; we don't suffer from imported articles in our line.        |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. About fifty per cent.                                                                                      |
| 20. Amount of capital?                                                                                                                     | 20. About six hundred dollars.                                                                                 |
| 21. Average rate of wages?                                                                                                                 | 21. It ought to be \$12 per month.                                                                             |

| QUESTIONS.                                                                                                                 | ANSWERS.                                                         |
|----------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                  | 1. Washington county, Pennsylvania.                              |
| 2. Kind or description of the manufactory?                                                                                 | 2. Boot and shoe manufactory.                                    |
| 3. Capital invested in ground and buildings?                                                                               | 3. Eight hundred dollars.                                        |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                            | 4. One hundred and fifty dollars.                                |
| 10. Number of men, women, and children employed, and average wages of each class?                                          | 10. Four men at 50 cents per day; one woman at 25 cents per day. |
| 11. How many hours a day employed; and what portion of the year?                                                           | 11. Nine hours, the year round.                                  |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                  | 12. All sold at the manufactory.                                 |
| 14. Where are the manufactures consumed?                                                                                   | 14. In Washington and Greencastle.                               |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                   | 15. None.                                                        |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what? | 16. Sold for cash.                                               |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                       | 17. Shoes \$1 75; boots \$5.                                     |
| 19. What has been the rate of your profits, annually, for the last three years?                                            | 19. One hundred dollars per year.                                |
| 21. Average rate of wages?                                                                                                 | 21. About 44 cents per day.                                      |

JACOB A. SANDER.

## DOCUMENT 14.—No. 278.

*John R. Griffith's Boot and Shoe Manufactory, Washington County, West Pennsylvania*

| QUESTIONS.                                                                                      | ANSWERS.                                                           |
|-------------------------------------------------------------------------------------------------|--------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. Washington county, Pennsylvania.                                |
| 2. Kind or description of the manufactory?                                                      | 2. Boots and shoes of leather; french and morocco shoes and boots. |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 4. \$5,761.                                                        |
| 5. Annual rate of profit on the capital invested?                                               | 5. \$648.                                                          |
| 7. Amount of articles annually manufactured since the establishment of the manufactory?         | 7. \$6,400.                                                        |

## DOCUMENT 14.—No. 278—Continued.

| QUESTIONS.                                                                                                          | ANSWERS.         |
|---------------------------------------------------------------------------------------------------------------------|------------------|
| 2. Whether the manufactures find a market at the manufactory? If not, how far they sent to a market?                | 12. At home.     |
| 3. Whether foreign articles of the like is enter into competition with them at a place of sale; and to what extent? | 13. They do not. |
| 0. Amount of capital?                                                                                               | 20. \$800.       |

JOHN R. GRIFFITH.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. \$7,370.                                                                                                            |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 6. There has been no material decrease for some time.                                                                  |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Articles annually manufactured amount to \$25,095. All kinds of boots and shoes quality and value, given in No. 17. |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. From 70 to 80 men, and from 15 to 20 boys; wages stated in No. 21.                                                 |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Average about 12 hours per day all the year.                                                                       |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Generally at home, or in the distance of 40 miles.                                                                 |
| 14. Where are the manufactures consumed?                                                                                              | 14. Generally in Westmoreland county.                                                                                  |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 15. None.                                                                                                              |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. Generally on credit; the credit will average 1 year; barter for produce, kattle, &c. &c.                           |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 17. Boots from \$3 50 to \$7; Monroes from \$2 to \$3; shoes \$2 to \$2 75.                                            |
| 19. What has been the rate of your profits, annually, for the last three years?                                                       | 19. Average fifteen per cent per annum.                                                                                |
| 20. Amount of capital?                                                                                                                | 20. Capital will amount to \$3,865.                                                                                    |
| 21. Average rate of wages?                                                                                                            | 21. Average 18 dollars per month in the towns, and from 8 to 10 dollars in the country.                                |

N. B. There are yet a few whom I have not seen.

| QUESTIONS.                                                                                                                            | ANSWERS.                                         |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Pennsylvania, Alleghany county.      |
| 2. Kind or description of the manufactory?                                                                                            | 2. Saddlery, bridles and harness.                |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Twelve thousand dollars.                      |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Eleven thousand five hundred dollars.         |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Say \$ 13,200.                                |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 8. The best part domestic; foreign trifling.     |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Thirteen men at one dollar per day.          |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Say about eleven hours.                      |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. All sold in Pittsburgh.                      |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?            | 13. I believe not.                               |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. Cash, and a credit from three to six months. |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Alleghany county, State of Pennsylvania.               |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Saddlery and harness making.                           |
| 3. Capital invested in ground and buildings?                                                                                               | 3. Ten thousand dollars.                                  |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. Eight thousand five hundred dollars.                   |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. Can't tell, but know that I take more than I give out. |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. I believe about \$10,000.                              |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Saddles, bridles, and harness.                         |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. 12 men: some make \$9 a week, and some \$6 a week.    |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. From ten to twelve.                                   |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to market?                                    | 12. I sell all mine in Pittsburgh.                        |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the country and down the river.                    |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Stick to Stevenson's tariff.                          |
| 21. Average rate of wages?                                                                                                                 | 21. I told you that higher up.                            |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                      | 6. Competition in our home market.                                  |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Say 11,000 dollars.                                              |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Chiefly domestic; very small amount foreign.                     |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. 10 men and 2 women; men \$1 25 per day, women 50 cents per day. |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. From 10 to 12.                                                  |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At Pittsburgh, and down the Ohio.                               |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. Does not interfere with us.                                     |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. I believe not.                                                  |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Cash, and credit from three to twelve months.                   |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. We are doing very well as we are.                               |

C. WALTERS.

## DOCUMENT 14.—No. 289.

*John Little's Saddle Manufactory, Pittsburgh, Alleghany County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                              |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Pennsylvania, Alleghany county.           |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Saddles, bridles, and harness.                     |
| 3. When established; and whether a joint stock concern?                                                                               | 3. In 1804.                                           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. About \$70,000.                                    |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. \$50,000.                                          |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. From 60 to \$70,000.                               |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. Domestic generally.                               |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                       | 11. Cannot tell.                                      |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. About 50 men, and 6 women; men per day.           |
| 13. How many hours a day employed; and what portion of the year?                                                                      | 13. Cannot tell.                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. At Pittsburgh and the western country, generally. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                             | ANSWERS.                   |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| 17. Whether foreign articles of the like kind enter into competition with them at the place of sale; and to what extent?                                                                                                                                                                                                               | 17. No interference.       |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, what credit? if bartered, for what?                                                                                                                                                                                                                | 20. Cash and short credit. |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                   | 22. The present duties.    |
| 25. What has been the rate of your profits, annually, for the last three years? and if it is a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore divided out annually? | 25. Will not tell.         |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                       | 27. Cannot tell.           |

| QUESTIONS.                                                                                                              | ANSWERS.                                                      |
|-------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                               | 1. Pennsylvania, Butler county.                               |
| 2. Kind or description of the manufactory?                                                                              | 2. Saddle.                                                    |
| 3. Capital invested in ground and buildings?                                                                            | 3. Three hundred dollars.                                     |
| 4. Average amount in material, and in cash the purchase of materials and payment of wages?                              | 4. Nine hundred and ninety-four dollars and fifty cents.      |
| 5. Annual rate of profit on the capital invested?                                                                       | 5. Three hundred and thirty-one dollars and fifty cents.      |
| 10. Number of men, women, and children employed, and average wages of each class?                                       | 10. Three men, \$ 26 per month.                               |
| 11. How many hours a day employed; and at what portion of the year?                                                     | 11. Twelve hours a day all the year.                          |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they sent to a market?                   | 12. At the manufactory, and sent 40 miles.                    |
| 14. Where are the manufactures consumed?                                                                                | 14. At Butler, and Venango county, Pa.                        |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, what credit? if bartered, for what? | 16. Some for cash, some on credit, some bartered for leather. |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                    | 17. From six to twenty-five dollars.                          |
| 19. What has been the rate of your profits, annually, for the last three years?                                         | 19. Four hundred dollars.                                     |
| 20. Amount of capital?                                                                                                  | 20. Three hundred dollars.                                    |
| 21. Average rate of wages?                                                                                              | 21. Twenty-six dollars per month.                             |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Pennsylvania, county of Erie.                                                 |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Saddles, harness, bridles, trunks.                                                     |
| 3. When established; and whether a joint stock concern?                                                                               | 3. Established three years.                                                               |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. One thousand five hundred dollars.                                                     |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. About two thousand dollars.                                                            |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. \$ 300 of hardware, about \$ 50 imported, and \$ 1,200 in leather of different kinds. |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 16. Find a market at the manufactory.                                                     |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | 17. None of any account.                                                                  |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                      | 24. Not any.                                                                              |
| 40. Average rate of wages?                                                                                                            | 40. Fifteen dollars per month.                                                            |

## DOCUMENT 14.—No. 292.

*John Lantz's Saddlery, Erie County, West Pennsylvania.*

| QUESTIONS.                                                                                                                     | ANSWERS.                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                      | 1. Situate in Erie county, Pennsylvania.                                                |
| 2. Kind or description of the manufactory?                                                                                     | 2. A saddle and harness factory.                                                        |
| 3. Capital invested in ground and buildings?                                                                                   | 3. Amount of capital employed the last year \$ 1,650.                                   |
| 5. Annual rate of profit on the capital invested?                                                                              | 5. Rate of profit on capital employed 2 per cent.                                       |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products? | 8. I should think that seven-eighths of the materials were of American production.      |
| 10. Number of men, women, and children employed, and average wages of each class?                                              | 10. Three men employed the whole year, average wages at \$ 22 per month.                |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                      | 12. The manufactures find a market at the manufactory.                                  |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?     | 13. Foreign articles of the like kinds do not enter into the domestic consumption here. |

## DOCUMENT 14.—No. 293.

*Hood and Stoops' Saddlery, Greene County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Greene county.                                                                        |
| 2. Kind or description of the manufactory?                                                                                            | 2. Saddlery.                                                                                           |
| 3. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 3. \$1,000.                                                                                            |
| 4. Annual rate of profit on the capital invested?                                                                                     | 4. 15 per cent.                                                                                        |
| 5. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 5. Profit decreased from competition in business.                                                      |
| 6. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 6. Manufactured \$1,800 worth last year.                                                               |
| 7. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?        | 7. \$800.                                                                                              |
| 8. Number of men, women, and children employed, and average wages of each class?                                                      | 8. 10. 3 men and 2 boys; average wages of men \$16 each per month.                                     |
| 9. How many hours a day employed; and what portion of the year?                                                                       | 9. 11. 10 hours per day the year round.                                                                |
| 10. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 10. 12. Sent to Ohio and Virginia.                                                                     |
| 11. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?            | 11. 13. None enter into competition.                                                                   |
| 12. Where are the manufactures consumed?                                                                                              | 12. 14. In Ohio and Virginia principally.                                                              |
| 13. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 13. 15. None.                                                                                          |
| 14. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 14. 16. Part cash; part 9 months' credit; part trade for sugar, linen, and grain, made in the country. |
| 15. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 15. 17. Men's saddles from \$7 to \$15.                                                                |
| 16. What has been the rate of your profits annually for the last three years?                                                         | 16. 19. 20 per cent.                                                                                   |
| 17. Amount of capital?                                                                                                                | 17. 20. \$1,200.                                                                                       |
| 18. Average rate of wages?                                                                                                            | 18. 21. \$16 per month.                                                                                |

| QUESTIONS.                                                | ANSWERS.                        |
|-----------------------------------------------------------|---------------------------------|
| 1. State and county in which the manufactory is situated? | 1. Greene county, Pennsylvania. |
| 2. Kind or description of the manufactory?                | 2. Saddlery.                    |

DOCUMENT 14.—No. 294—Continued.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$500.                                                                                  |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. About \$600.                                                                            |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. About \$300.                                                                            |
| 6. Cause of the increase (or decrease, as the case may be,) of profit?                                                                     | 6. Rather increasing, in consequence of the population.                                    |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. Kept no account of such manufactory.                                                    |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Cannot tell the quantity of each; use foreign materials or manufactory.                 |
| 9. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                             | 9. Never bought any foreign or imported materials.                                         |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Only 2 apprentices now in my factory.                                                  |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. Work all hours in the day according to ancient custom.                                 |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. Find a market at the factory for all.                                                  |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. No foreign articles of the kind and value bought here.                                 |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the place where manufactured, and parts about.                                      |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None from me.                                                                          |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Sell on credit, and take cash and produce as can be agreed on.                         |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Little or no difference in price for length of time; if any, the prices are declining. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. No imported articles of my manufacture in market here.                                 |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. About 25 per cent.                                                                     |
| 20. Amount of capital?                                                                                                                     | 20. Answered in 4th query.                                                                 |
| 21. Average rate of wages?                                                                                                                 | 21. Hire but few; good hands at \$25 per month.                                            |

## DOCUMENT 14.—No. 295.

*Saddlery, Washington County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. West Middletown, Washington county, Pennsylvania.                                                                                                                                                                         |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Saddlery.                                                                                                                                                                                                                 |
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$100.                                                                                                                                                                                                                    |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. How much cash is not a fair question.                                                                                                                                                                                     |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. The rate of profit upon the capital is 40 per cent.                                                                                                                                                                       |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. The value of the manufactured articles, \$1,500.                                                                                                                                                                          |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Materials are domestic.                                                                                                                                                                                                   |
| 10. Number of men, women, and children employed; and average wages of each class?                                                          | 10. 4 persons employed at the rate of 50 cents per day.                                                                                                                                                                      |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Credit 3, 6, 9, and 12 months; sometimes forgive the debt; barter for every thing, such as oats, straw, corn, rye, potatoes, buckwheat, dearborns, gigs, carriage-horses, and many other things too tedious now to name. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. No reduction of duty.                                                                                                                                                                                                    |
| 19. What has been the rate of your profits annually for the last three years?                                                              | 19. \$400.                                                                                                                                                                                                                   |
| 20. Amount of capital?                                                                                                                     | 20. \$1,000.                                                                                                                                                                                                                 |

## DOCUMENT 14.—No. 297.

*Thomas Wilson, Saddler, Wilmington, Mercer County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Mercer county, Pennsylvania.                                                                        |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Saddles and bridles, &c. &c.                                                                        |
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$150.                                                                                              |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. \$800.                                                                                              |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. From 25 to 37 per cent.                                                                             |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. About \$300 worth of domestic leather, &c., and about \$5 worth of foreign silk.                    |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. One man and two boys; the man at \$180 per year; the boys at \$96 each per year.                   |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. Ten hours per day, the whole year.                                                                 |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                                                |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity of the manufactory.                                                                |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. Not exported.                                                                                      |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Half on a credit for six months, & other half bartered for the produce of the surrounding country. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A high duty.                                                                                       |
| 20. Amount of capital?                                                                                                                     | 20. \$500.                                                                                             |

*Wm. Dickson, Saddler, Newcastle, Mercer County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                | ANSWERS.                                                                                                             |
|-------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| State and county in which the manufactory is situated?                                                                                    | 1. Mercer county, Pennsylvania.                                                                                      |
| Kind or description of the manufactory?                                                                                                   | 2. Saddle and bridle manufactory.                                                                                    |
| Capital invested in ground and build-                                                                                                     | 3. \$150.                                                                                                            |
| Average amount in materials, and in for the purchase of materials and pay-                                                                | 4. \$800.                                                                                                            |
| of wages?                                                                                                                                 | 5. 25 per cent.                                                                                                      |
| Annual rate of profit on the capital in-                                                                                                  | 6. A decrease of profit is often occasioned by merchants bringing similar articles from the Atlantic cities.         |
| vested?                                                                                                                                   | 8. About \$783 of domestic; about \$17 of foreign silk and plush.                                                    |
| Cause of the increase (or decrease, as case may be) of profit?                                                                            | 10. One man and two boys; the man at \$17 per month; the boy at \$8 per month.                                       |
| Quantity and value of different kinds of materials used; distinguishing between foreign products and domestic products?                   | 11. Ten hours, the whole year.                                                                                       |
| 1. Number of men, women, and children employed, and average wages of each class?                                                          | 12. At the manufactory.                                                                                              |
| 2. How many hours a day employed, and portion of the year?                                                                                | 13. They do to a considerable extent.                                                                                |
| 3. Whether the manufactures find a market at the manufactory? If not, how far are sent to a market?                                       | 14. In the vicinity of the manufactory.                                                                              |
| 4. Whether foreign articles of the like kind enter into competition with them at place of sale; and to what extent?                       | 16. One half for cash; the remaining part is sold on a credit of six months, and produce of the surrounding country. |
| 5. Where are the manufactures consumed?                                                                                                   | 18. A high duty.                                                                                                     |
| 6. Whether the manufacture is sold by manufacturer for cash? and if on credit, what credit? if bartered, for what?                        | 20. About \$300.                                                                                                     |
| 7. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? |                                                                                                                      |
| 8. Amount of capital?                                                                                                                     |                                                                                                                      |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. About 33 per cent.                                                                                                       |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. About \$800 worth.                                                                                                       |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. \$300 worth of domestic products; about \$5 of foreign silk.                                                             |
| 10. Number of men, women and children employed, and average wages of each class?                                                           | 10. One man, \$150 per year.                                                                                                |
| 11. How many hours a day employed, and what portion of the year?                                                                           | 11. Ten hours, the whole year.                                                                                              |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 12. At the manufactory.                                                                                                     |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity of the manufactory.                                                                                     |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. Not exported.                                                                                                           |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Three-fourths on a credit of six months, and one-fourth bartered for stock for the manufactory and for country produce. |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. A high duty.                                                                                                            |

## DOCUMENT 14.—No. 301.

*Summary of the Saddle Manufactories, Westmoreland County, West Pennsylvania.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. In Westmoreland county, and State of Pennsylvania.                                                                                          |
| 2. Kind or description of the manufactory?                                                                                            | 2. Saddle manufactories.                                                                                                                       |
| 3. Capital invested in ground and buildings?                                                                                          | 3. \$1,680.                                                                                                                                    |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. \$11,560 per annum.                                                                                                                         |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. \$3,625.                                                                                                                                    |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 6. No material increase or decrease.                                                                                                           |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. \$13,175; all kinds and descriptions; value and quality given in No. 17.                                                                    |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. From 16 to 20 men at 20 dollars per month, and the same number of boys who receive no other compensation than their clothing and boarding. |
| 11. How many hours a day employed; and what portion of the year?                                                                      | 11. Average 11 hours per day all the year.                                                                                                     |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. At the manufactory.                                                                                                                        |

## DOCUMENT 14.—No. 301—Continued.

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                 | 13. No.                                                                     |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In Westmoreland county.                                                 |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None.                                                                   |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                 | 16. Generally on credit, which is one year; barter for produce and leather. |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Men's saddles from \$6 to \$30; women's saddles from \$16 to \$25.      |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Unable to answer.                                                       |
| 19. What has been the rate of your profits, annually, for the last three years?                                                            | 19. Twenty-five per cent. per annum.                                        |
| 20. Amount of capital?                                                                                                                     | 20. \$5,970.                                                                |
| 21. Average rate of wages?                                                                                                                 | 21. Average wages \$15 per month.                                           |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                        |
|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Pennsylvania, Armstrong county.                                     |
| 2. Kind or description of the manufactory?                                                                                            | 2. Hat manufactory.                                                             |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Five hundred dollars.                                                        |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Six hundred dollars.                                                         |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Fifty per cent.                                                              |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Two hundred hats; 25 wool hats at 50 cents, and 175 fine at from \$3 to \$8. |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Three men at \$26 per month each.                                           |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Twelve hours per day, and 11 months of the year.                            |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. At the manufactory.                                                         |

| QUESTIONS.                                                                                                                                 | ANSWERS.                    |
|--------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| 13. Whether foreign articles of the like kind enter into competition with them at the place of sale, and to what extent?                   | 13. They do not.            |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In Armstrong county.    |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                  | 15. None exported.          |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, what credit? if bartered, for what?                    | 16. Cash.                   |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Same as above.          |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. None.                   |
| 19. What has been the rate of your profits, usually, for the last three years?                                                             | 19. Forty-five per cent.    |
| 20. Amount of capital?                                                                                                                     | 20. Eleven hundred dollars. |
| 21. Average rate of wages?                                                                                                                 | 21. Twenty-six dollars.     |

Very respectfully,

ISAAC McCONNELL.

| QUESTIONS.                                                                                                                                                                                                                                                                                          | ANSWERS.                                                                              |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                           | 1. Beaver county, State of Pennsylvania.                                              |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                | 2. Hat manufactory.                                                                   |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                             | 3. In 1823; a partnership concern.                                                    |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                     | 4. \$ 1,500 in ground and buildings.                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                     | 5. \$ 1,400, perhaps nearly \$ 1,500.                                                 |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which borrowed, after providing for the interest on it; and the rate of the profit upon that portion which is not borrowed? | 6. About 18 per cent.                                                                 |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                             | 7. Profits nearly stationary.                                                         |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                      | 8. Saddle-making and tanning, supposed to realize 20 per cent. on the entire capital. |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                              |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                      | 9. About \$ 10,000 worth annually.                                                                                    |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                                                            | 10. Furs \$ 2,000; trimmings, silk, and rocco \$1,000; all, or nearly so, home produce.                               |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                                                            | 11. Unknown.                                                                                                          |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. Eight men and two women; <i>franc</i> each \$ 1 per day, the latter 37½ cents per day each.                       |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Average eight hours per day.                                                                                      |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. Average the same wages throughout this State.                                                                     |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. None.                                                                                                             |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Principally sold at home; none farther than 50 miles from the place of manufacture.                               |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                                 | 17. Supposed to be no competition.                                                                                    |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Most of them where sold.                                                                                          |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. Supposed to be none.                                                                                              |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. One-quarter cash, other <i>three quarters</i> credit of three months, and <i>better</i> for agricultural produce. |
| 21. Whether the cost of the manufactured article (to the manufacturer,) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                               | 21. Remained about stationary for a year past; prior to then cost was somewhat less.                                  |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. About the same prices for the last six years as now, viz. from \$24 to \$80 per dozen.                            |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. A duty amounting almost to prohibition.                                                                           |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Do not know.                                                                                                      |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Perhaps 18 per cent.; dividend to each partner nine per cent.                                                     |

| QUESTIONS.                                                                                                                                                                                                                                                                          | ANSWERS.                                                                                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                        | 26. About $\frac{1}{3}$ , wages $\frac{1}{3}$ , profits about 1-6.                       |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                    | 27. None; other productions, including raw materials for hatting, about \$2,000.         |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                | 28. Unknown.                                                                             |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12 $\frac{1}{2}$ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. It would.                                                                            |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                      | 30. In agriculture.                                                                      |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to twelve and a half per cent.?                                                                                                         | 31. Supposed to be none.                                                                 |
| 32. Are not the manufactures of salt and on remote from the points of importation, it of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                            | 32. Partially so; cannot long remain so from the rapid advance of internal improvements. |
| 33. Amount of capital; and what proportion of borrowed capital bears to that which is all?                                                                                                                                                                                          | 33. Nearly \$3,000 of real capital; none borrowed or fictitious.                         |

Respectfully,

SHIVELAY &amp; McCLUREY.

| QUESTIONS.                                                                                 | ANSWERS.                        |
|--------------------------------------------------------------------------------------------|---------------------------------|
| 1. State and county in which the manufactory is situated?                                  | 1. Pennsylvania, Butler county. |
| 2. Kind or description of the manufactory?                                                 | 2. Hat.                         |
| 3. Capital invested in ground and building?                                                | 3. \$700.                       |
| 4. Average amount in materials, and in for the purchase of materials and payment of wages? | 4. \$400.                       |
| 5. Annual rate of profit on the capital invested?                                          | 5. \$600.                       |

## DOCUMENT 14.—No. 304.—Continued.

| QUESTIONS.                                                                                                                 | ANSWERS.                                                             |
|----------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| 10. Number of men, women, and children employed, and average wages of each class?                                          | 10. 2 men; \$30 per month, <i>annually</i> .                         |
| 11. How many hours a day employed, and what portion of the year?                                                           | 11. 9 hours a day, all the year.                                     |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                  | 12. At the manufactory.                                              |
| 14. Where are the manufactures consumed?                                                                                   | 14. Butler county, Pennsylvania.                                     |
| 15. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                  | 15. No.                                                              |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what? | 16. Some for cash, some on credit, and bartered for country produce. |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                       | 17. From 50 cents to \$3.                                            |
| 19. What has been the rate of your profits, annually, for the last three years?                                            | 19. \$200.                                                           |
| 20. Amount of capital?                                                                                                     | 20. \$100.                                                           |
| 21. Average rate of wages?                                                                                                 | 21. \$30 per month.                                                  |

## DOCUMENT 14.—No. 305.

*C. Buhl's Hat Manufactory, Butler County, West Pennsylvania.*

| QUESTIONS.                                                                                                                     | ANSWERS.                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                      | 1. Butler county, Pennsylvania.                                                                   |
| 2. Kind or description of the manufactory?                                                                                     | 2. Hats.                                                                                          |
| 3. Capital invested in ground and buildings?                                                                                   | 3. \$400.                                                                                         |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                | 4. Wool, 2,000 lbs.; fur, about 400 lbs. wages, about \$400, part payment in cash total, \$1,600. |
| 5. Annual rate of profit on the capital invested?                                                                              | 5. Clear profit about \$200.                                                                      |
| 6. Cause of the increase (or decrease, as the case may be,) of profit?                                                         | 6. Decreasing on account of change of head dress—men wearing caps.                                |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products? | 8. 2,000 lbs. wool, \$400; fur about \$100 foreign furs.                                          |
| 10. Number of men, women, and children employed, and average wages of each class?                                              | 10. From 5 to 6 men; 1 woman.                                                                     |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to market?                        | 12. $\frac{3}{4}$ sent down the river; $\frac{1}{4}$ sold at home.                                |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?     | 16. Sold for cash about $\frac{1}{2}$ ; $\frac{3}{4}$ for barter.                                 |

*Lot Lewis's Woollen Manufactory, Crawford County, West Pennsylvania.*

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                  | 1. Crawford county, Pennsylvania.                                   |
| 2. Kind or description of the manufactory?                                                                                                 | 2. Woollen manufactory.                                             |
| 3. Capital invested in ground and buildings?                                                                                               | 3. \$1,500.                                                         |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                            | 4. \$200.                                                           |
| 5. Annual rate of profit on the capital invested?                                                                                          | 5. 33 per cent.                                                     |
| 6. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                    | 6. Stationary.                                                      |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?      | 7. 4,500 yards, $\frac{3}{4}$ cloth and $\frac{1}{4}$ flannel.      |
| 8. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?             | 8. Dye stuffs, foreign, \$25; domestics, copperas, soap, &c., \$25. |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. 2 men, \$17 per month.                                          |
| 11. How many hours a day employed; and what portion of the year?                                                                           | 11. 14 hours; 7 months of the year.                                 |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In the vicinity.                                                |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None exported.                                                  |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Cloth, \$1; flannel, 75 cents.                                  |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. Duties should not be reduced.                                   |

| QUESTIONS.                                                                                                                                 | ANSWERS.                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
| State and county in which the manufactory is situated?                                                                                     | 1. Greene county, Pennsylvania.                                                                                |
| Kind or description of the manufactory?                                                                                                    | 2. Hat manufactory.                                                                                            |
| Capital invested in ground and building?                                                                                                   | 3. One thousand five hundred dollars.                                                                          |
| Average amount in materials, and in for the purchase of materials and payment of wages?                                                    | 4. One thousand four hundred dollars.                                                                          |
| Annual rate of profit on the capital invested?                                                                                             | 5. Six hundred dollars.                                                                                        |
| Cause of the increase (or decrease, as case may be,) of profit?                                                                            | 6. No cause of increase or decrease of the profits.                                                            |
| Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?         | 7. 600 fur hats, 500 of wool; fur hats at \$3 each, 62½ cents for wool hats.                                   |
| Quantity and value of different kinds of materials used; distinguishing between foreign products and domestic products?                    | 8. See 4th query for this; say one-fourth of the materials imported.                                           |
| Cost in the United States of similar articles of manufactory imported from abroad, from what countries?                                    | 9. Cannot answer.                                                                                              |
| 10. Number of men, women, and children employed, and average wages of each class?                                                          | 10. Four men, no women or children; about \$5 per week each.                                                   |
| 11. How many hours a day employed; and a portion of the year?                                                                              | 11. All day throughout the year.                                                                               |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they sent to a market?                                      | 12. Half sold at the manufactory, half taken to another State.                                                 |
| 13. Whether foreign articles of the like kind enter into competition with them at the place of sale; and to what extent?                   | 13. No foreign competition in my line.                                                                         |
| 14. Where are the manufactures consumed?                                                                                                   | 14. In Pennsylvania, Virginia, and Ohio.                                                                       |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                   | 15. None of my manufacture.                                                                                    |
| 16. Whether the manufacture is sold by manufacturer for cash? and if on credit, what credit? if bartered, for what?                        | 16. Mostly a credit of six to 12 months, trade and cash, as agreed for; trade the produce of the neighborhood. |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                       | 17. Answered in query 7th.                                                                                     |
| 18. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 18. None imported here.                                                                                        |
| 19. What has been the rate of your production, annually, for the last three years?                                                         | 19. Answered in 7th query.                                                                                     |
| 20. Amount of capital?                                                                                                                     | 20. Answered—but say \$1000.                                                                                   |
| 21. Average rate of wages?                                                                                                                 | 21. About \$5 per week for each hand.                                                                          |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Pennsylvania, Greene county.                                                         |
| 2. Kind or description of the manufactory?                                                                                            | 2. Hat manufactory.                                                                     |
| 3. Capital invested in ground and buildings?                                                                                          | 3. Eight hundred dollars.                                                               |
| 4. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 4. Six hundred dollars.                                                                 |
| 5. Annual rate of profit on the capital invested?                                                                                     | 5. Fifteen per cent.                                                                    |
| 6. Cause of the increase (or decrease, as the case may be) of profit?                                                                 | 6. Decreased from competition.                                                          |
| 7. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 7. Eight hundred dollars' worth, principally rosam hats.                                |
| 8. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?        | 8. \$15 imported furs; 100 dollars' worth of wool and fur, domestic.                    |
| 10. Number of men, women, and children employed, and average wages of each class?                                                     | 10. Three men; wages about 175 dollars a year each.                                     |
| 11. How many hours a day employed, and what portion of the year?                                                                      | 11. Ten hours per day.                                                                  |
| 12. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                             | 12. Sold at the manufactory.                                                            |
| 13. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?            | 13. They do, but extent not known.                                                      |
| 14. Where are the manufactures consumed?                                                                                              | 14. In Greene county.                                                                   |
| 15. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 15. None exported.                                                                      |
| 16. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 16. Generally on credit nine months.                                                    |
| 17. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 17. Seven years ago hats brought 4 dollars, which now bring no more than three dollars. |
| 19. What has been the rate of your profits, annually, for the last three years?                                                       | 19. Sixteen per cent.                                                                   |
| 21. Average rate of wages?                                                                                                            | 21. 175 dollars per year.                                                               |

| QUESTIONS.                                                                                                                        | ANSWERS.                                                                                               |
|-----------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| Capital invested in ground and build-                                                                                             | 3. Four hundred dollars.                                                                               |
| Average amount in materials, and in for the purchase of materials and pay- of wages?                                              | 4. Six hundred dollars.                                                                                |
| Annual rate of profit on the capital in- v-est?                                                                                   | 5. Fifteen per cent.                                                                                   |
| Cause of the increase, (or decrease, as case may be,) of profit?                                                                  | 6. Decrease is fifteen per cent.                                                                       |
| Amount of articles annually manufac- tured since the establishment of the manu- factory? Description, quality, and value of kind? | 7. Two hundred fur hats, and 556 wool hats; fur hats at \$3 each; wool at \$7 per doz.                 |
| Quantity and value of different kinds of materials used; distinguishing between foreign products and domestic products?           | 8. Five hundred dollars, domestic pro- ductions.                                                       |
| 9. Number of men, women, and children employed, and average wages of each class?                                                  | 10. Three men and one woman.                                                                           |
| 10. How many hours a day employed; and portion of the year?                                                                       | 11. From the 1st March to the 1st of Octo- ber, 10 hours per day, and the balance of the year 8 hours. |
| 11. Whether the manufactures find a mar- ket at the manufactory? If not, how far they sent to a market?                           | 12. At the manufactory and other adjoin- ing States.                                                   |
| 12. Where are the manufactures consum- ed?                                                                                        | 14. In the neighborhood.                                                                               |
| 13. Whether any of the manufactures are exported to foreign countries? and if so, where?                                          | 15. Not any exported to foreign coun- tries.                                                           |
| 14. Whether the manufacture is sold by manufacturer for cash? and if on credit, what credit? if bartered, for what?               | 16. Part cash, and part wool, and the balance fur; credit for cash, six months.                        |
| 15. The prices at which the manufactures are sold by the manufacturer since establishment?                                        | 17. Fur hats from 3 to 6 dollars; wool hats from 75 cents to 1 dollar retail.                          |
| 16. Amount of capital?                                                                                                            | 20. Twelve hundred dollars.                                                                            |
| 17. Average rate of wages?                                                                                                        | 21. Two hundred and eighty dollars, or six dollars per week for good hands.                            |

HUGH SWAN.

## DOCUMENT 14.—No. 322.

*Summary of the Hat Manufactories of Westmoreland County, West Pennsylvania.*

| QUESTIONS.                                                | ANSWERS.                                              |
|-----------------------------------------------------------|-------------------------------------------------------|
| 1. State and county in which the manufactory is situated? | 1. In Westmoreland county, and State of Pennsylvania. |

DOCUMENT 14.—No. 322—Continued.

| QUESTIONS.                                                                                                                       | ANSWERS.                                                                                                                                                                        |
|----------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Kind or description of the manufacture.                                                                                          | 2. Hat manufactories.                                                                                                                                                           |
| Capital invested in ground and build-                                                                                            | 3. Four thousand one hundred and forty-five dollars.                                                                                                                            |
| Average amount in materials, and in for the purchase of materials and pay- of wages?                                             | 4. Thirteen thousand five hundred and sixty dollars per annum.                                                                                                                  |
| Annual rate of profit on the capital in- d?                                                                                      | 5. Four thousand seven hundred and forty dollars.                                                                                                                               |
| Cause of the increase, (or decrease, as case may be,) of profit?                                                                 | 6. Latterly no material increase or de- crease.                                                                                                                                 |
| Amount of articles annually manufac- t since the establishment of the manu- ry? Description, quality, and value of kind?         | 7. Eighteen thousand dollars: all kinds of fur and woollen hats: quality and value given in No. 17.                                                                             |
| Quantity and value of different kinds of materials used; distinguishing between foreign products and domestic products?          | 8. Eight thousand four hundred and ninety-five dollars' worth of furs and wool are manu- factured annually in this county; the wool at present will average 30 cents per pound. |
| Cost in the United States of similar ar- s of manufacture imported from abroad, from what countries?                             | 9. Unable to answer.                                                                                                                                                            |
| 1. Number of men, women, and children employed, and average wages of each class?                                                 | 10. From 30 to 40 men are engaged in this manufacture, and from 5 to 10 boys: the latter receive no compensation but clothes and boarding.                                      |
| 1. How many hours a day employed, and 1 portion of the year?                                                                     | 11. Average ten hours per day, all the year.                                                                                                                                    |
| 2. Whether the manufactures find a mar- at the manufactory? If not, how far they sent to a market?                               | 12. Generally at the manufactory: some, however, are sent to Baltimore, and some to Pittsburgh.                                                                                 |
| 3. Whether foreign articles of the like is enter into competition with them at place of sale, and to what extent?                | 13. Unable to answer.                                                                                                                                                           |
| 4. Where are the manufactures consumed?                                                                                          | 14. Do.                                                                                                                                                                         |
| 5. Whether any of the manufactures are orted to foreign countries? and, if so, re?                                               | 15. Do.                                                                                                                                                                         |
| 6. Whether the manufacture is sold by manufacturer for cash? and if on credit, what credit? if bartered, for what?               | 16. Generally on credit, which will average nine months: bartered for wool and produce.                                                                                         |
| 7. The prices at which the manufactures e been sold by the manufacturer since establishment?                                     | 17. Beaveretts \$8, castors \$6, rorams \$3 50, woollen per dozen.                                                                                                              |
| 8. What rate of duty is necessary to en- the manufacturer to enter into competi- in the home market with similar articles orted? | 18. Unable to answer.                                                                                                                                                           |
| 9. What has been the rate of your profits, ually, for the last three years?                                                      | 19. Twenty per cent. per annum.                                                                                                                                                 |
| 0. Amount of capital?                                                                                                            | 20. Nine thousand three hundred and fifty-five dollars.                                                                                                                         |
| 1. Average rate of wages?                                                                                                        | 21. Average wages, from 12 to \$15 per month.                                                                                                                                   |

N. B.—There are yet a few factories in this county which I have not received, through at of time.

ED. JOHNSTON.

## DOCUMENT 14.—No. 393.

## ABSTRACT OF THE MANUFACTURES OF PENNSYLVANIA.

# MANUFACTURES.

## RETURNS FROM THE STATE OF DELAWARE.

### DOCUMENT 15.—No. 1.

NEWARK, *April 24th*, 1832.

SIR: I have at length, after the most assiduous application, during a period of between two and three weeks, brought my labors to a close in condensing the information respecting manufactures (so far as it is statistical,) embraced in the answers to the queries proposed in your circular addressed to me in February last. I could do nothing until the forms with the answers to the queries came in; after which I lost no time in commencing my report. I began with those from Kent and Sussex, having received them first; and my first step was to arrange the manufacturers and mechanics in classes as far as it could be done. Then I formed tables, with columns, and headed them so as to correspond with the queries, the answers to which I designed to enter therein. The modification and entry of these was tedious and perplexing, owing to the calculations I had to make, and the different manner in which the answers were made out. In the answers, too, materials were sometimes put for the manufactured articles, and the latter for the former, which rendered transposition necessary. These difficulties were experienced to the greatest extent in arranging and adjusting the returns for Newcastle county. The mass of matter presented was chaotic, and it was impossible to bring order, method, and accuracy out of what was so deficient in these respects. I have not been wanting in exertion, however, to arrive as near as was practicable at this result in my tabular statements.

After all the trouble and expense incurred in distributing the forms containing the queries among the manufacturers and mechanics, there is a long list of them who have returned no answers; which list is transmitted herewith. Some of them, my assistant, Mr. W. Mendenhall, informed me, appeared indifferent about answering, while others were under an apprehension that the object in view was an assessment of their property with a view to taxing them. To all the task of appending answers to so many queries appeared more or less appalling, some not knowing how to go about it, while others were unwilling to encounter the trouble of doing it.

You will find, in looking over the queries in the circulars, that very few have answers appended to them. The queries in a small number of the circulars are, however, pretty fully and satisfactorily answered. They have been so answered by E. J. Dupont, Charles J. Dupont, Jacob Pusey, the Petersons, tanners, near Smyrna, and M. E. Waples, iron master, of Sussex county. The forms containing their answers I have selected and separated from the rest, that your attention may be more particularly directed to them.

You will observe, on reading the answers in all the circulars, that to the manufacturers and mechanics the idea of reducing the duties is alarming. They are under the impression that any material reduction would cause them to abandon the branches of manufacturing and mechanical industry in which they are respectively engaged; that this would be attended with an entire sacrifice of capital vested in their factories and machinery; and that, being obliged to abandon the business they understand, they would be at a loss to determine on what they should next pursue, having no capital left to begin with, nor skill in other occupations.

You will perceive, also, on examining the answers, that of late years household manufactures have increased.

It will be seen by one of the answers of Mr. E. J. Dupont, that he is of opinion that protective duties, when they have fulfilled their end in diminishing the importation of, or in expelling altogether, foreign articles similar to domestic fabrics protected, and have thereby become unproductive and inoperative as taxes, ought to be still retained. In the reasons he assigns in support of his opinion I concur, as you will find when you come to peruse the communication I have prepared (by your request) to accompany this report. I shall transmit it to the department as soon as I can have a fair copy transcribed, which will require three or four days, the production being of considerable length. It was ready, all to copying, before I commenced the report.

In one of the answers of Mahlen Betts, who works an iron foundry at Wilmington, there is a suggestion respecting the danger of competition between imported iron and iron manufactured in parts of the country far distant from the points of importation, by reason of the increased facilities of transportation produced by canals and railroads already constructed and constructing, which has my approbation; and merits, I think, your attention. You will see my sentiments on the subject expressed in the communication.

I have to observe, in regard to the opinion and suggestion adverted to, that there has been no interchange of sentiment between the authors of them and myself, my communication having been penned before I had an opportunity of seeing the answers.

I shall transmit to the Department accounts of the expenses incurred by myself and assistants, and the compensations allowed to the latter, as soon as they can be prepared.

I have the honor to be,

With great respect,

Your obedient servant,

ANDREW GRAY.

Hon. LOUIS McLANE.

*'Names of Manufacturers who were called upon, but have made no return.*

Allan Wood, iron roller.

Rockland Manufacturing Company, cotton spinners.

Lewis Sachrist, woollen manufacturer.

Samuel Meeteer, paper maker.

Samuel Johnson, woollen manufacturer.

Philip Raybold, brick maker.

Swift, Brick, and Swift, cotton spinners.

Gilpin & Co., paper makers, (*declined answering.*)

—— Bancroft, cotton spinner, (*answered Gilpin.*)

Samuel Pool, flour merchant, (*declined answering.*)

Samuel Shipley, flour merchant, (*declined answering.*)

James Canby, flour merchant, (*answered Gilpin.*)

Branch Green, potter.

## DOCUMENT 15.—No. 3.

*Powder Manufactory, Newcastle County, State of Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. State of Delaware, Newcastle county.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Gunpowder; water power.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1804: several partners.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. The manufactory having been gradually and progressively enlarged, out of its profits, ever since its establishment, the whole amount of capital invested cannot be calculated; the present value of the land, buildings, water power, and machinery, may be estimated at \$80,000. This estimate is based on the supposition of a continuation of the prosperity of the country; should the protection be withdrawn, American labor must take its level with the labor of the manufacturing countries in Europe, and the value of American produce and raw materials must fall in the same proportion. |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. The average amount of capital embodied as stock in trade, comprehending the materials on hand and purchased at credit from the importers, is estimated at \$100,000. The materials purchased at a credit have been included in this estimate, being an important item in the necessary means for the carrying on of the manufactory, and being, in fact, a part of the capital involved, no matter to whom it belongs.                                                                                                                                                                                 |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. As stated in answer to query No. 4, a large portion of the profits has been applied to the increase of the establishment and to secure its permanency by improvements, from which the annual rate of its profits cannot be calculated. A large proportion of the profits have been sunk in re-building the works after extensive explosions. The rate of profit should be the same on capital borrowed or not borrowed: the real capital as well as the borrowed is entitled to interest before any part of the proceeds can be called profit.                                                         |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. The price of gunpowder in the United States being, at this time, entirely regulated by the great competition existing between the American manufacturers; the only causes of increase or decrease of profit, or of loss, consist in the degree of skill of the manufacturer, and the proper management of the business.                                                                                                                                                                                                                                                                                |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. The amount of gunpowder manufactured annually by us is, at this time, about 850,000 pounds. The quantity made since the establishment of the manufactory to the present time is about 13,400,000 pounds.                                                                                                                                                                                                                                                                                                                                                                                               |

## DOCUMENT 15.—No. 3—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Quantity and value of different kinds raw materials used; distinguishing between foreign products and domestic products?                                                                                                                               | 10. The quantity of materials used is about 400 tons of crude saltpetre, imported from India; 50 tons of brimstone, from France or Italy; and 300 cords of wood for charcoal. The cost of saltpetre is, at this time, about 7½ cents per pound; brimstone, 2½ to 3 cents.                                                                                                                                                            |
| 1. Cost in the United States of similar articles of manufacture imported from abroad, from what countries?                                                                                                                                                | 11. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 2. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                          | 12. About 140 men working in the mills, laborers, carters, coopers, &c., &c., &c.                                                                                                                                                                                                                                                                                                                                                    |
| 3. How many hours a day employed; what portion of the year?                                                                                                                                                                                               | 13. Twelve hours in summer and nine in winter, averaging, during the year, eleven hours per day.                                                                                                                                                                                                                                                                                                                                     |
| 4. Rate of wages of similar classes otherwise employed in the same State and county, other States, and in foreign countries?                                                                                                                              | 14. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 5. Number of horses or other animals employed?                                                                                                                                                                                                            | 15. Two teams of five horses each for the hauling of materials and produce, and several horses for other purposes.                                                                                                                                                                                                                                                                                                                   |
| 6. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                  | 16. The manufactured articles are sold on the orders of customers, or sent to agents for sale in different parts of the United States.                                                                                                                                                                                                                                                                                               |
| 7. Whether foreign articles of the like kind enter into competition with them at the place of sale; and to what extent?                                                                                                                                   | 17. At the time of the establishment of our manufactory in 1804, the country was supplied almost entirely from England and Holland. At this time we do not know of any foreign importation, except at Boston, and that to a trifling amount.                                                                                                                                                                                         |
| 8. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. Entirely for home consumption in the United States.                                                                                                                                                                                                                                                                                                                                                                              |
| 9. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                   | 19. None from our manufactory, but a large quantity of gunpowder is manufactured in the United States for exportation to the West Indies, South America, and the western coast. The quantity exported annually is about 1,900,000 pounds.                                                                                                                                                                                            |
| 10. Whether the manufactory is sold by the manufacturer for cash? and if on credit, what credit? if bartered, for what?                                                                                                                                   | 20. A portion of the sales are made for cash; the rest on a credit of 4 to 6 months.                                                                                                                                                                                                                                                                                                                                                 |
| 1. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. The variations in the cost of materials have been great since the establishment of the manufactory. Saltpetre from 40 cents per pound, at one time, to 5 cents at another; brimstone from 12 cents to 2. The cost of the manufactured article has been gradually and considerably decreased by improvements in the process of manufacturing, and by the introduction of machinery.                                               |
| 2. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. At the time of the establishment of our manufactory, the country was, as stated before, supplied principally with imported gunpowder. The importers had then the regulation of the price, which kept steady for years, at 40 cents per pound. During 1804 and 1805 our powder brought the same price, say 40 cents. In 1806 American competition began to be felt, and the price was reduced to 36 cents; in 1807, from the same |

| QUESTIONS.                                                                                                                                                                                                                | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p>                                                                         | <p>cause, it fell to 34 and 32. During the war, the scarcity and high price of materials, and the extent of the demands, raised the price gradually to 44, 60, and 72 cents. A number of large manufactures having then been put in operation, the price during the last year of the war was reduced to 56 cents. Extensive home competition has since reduced the price of our powder to be at this time from 16 to 20 cents; and inferior powder, for blasting and for exportation, sells as low as 12 to 14 cents per pound.</p>                                                                                                                                                                                                                                                                                                                                                                                         |
| <p>24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?</p>                                                                                                                   | <p>23. The encouragement given to the manufacture of gunpowder by the war, and the protection it has received from the tariff, have placed the home market entirely in the hands of the American manufacturers, and made gunpowder an article of exportation. The price of saltpetre is now higher in England than in the U. S., and powder could not be imported at this time, even duty free; the duty is consequently merely nominal—nobody pays it; but, nevertheless, the present high duty is indispensable for the security and permanency of this branch of our manufacture, and as a safeguard to the American manufacturer against the fluctuations of the market in Europe. Were it not for the protective duty our market would occasionally be glutted by immoderate importations; the situation of the American manufacturer would become precarious, and, in some of time, inevitable ruin would follow.</p> |
| <p>25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been con-</p> | <p>24. The duty on gunpowder being specific, is the best kind of duty. The propriety of allowing the drawback on imported powder is, however, doubted; the manufacture of American gunpowder being so extensive as to furnish an annual exportation of about one million of pounds, there could not be any motive to encourage, by the prospect of drawback, an importation of English damaged and low-priced powder, which of late years has not been more than from 50 to 70,000 pounds. Would it not be more to the interest of our commerce to import an adequate quantity of saltpetre from India and brimstone from Italy, the freight of which would exceed the freight on the powder from England, and which would be reported on American accounts, while the powder, in most cases, is sent here by the British owners not finding sale in their own market for a damaged or inferior article.</p>                |
|                                                                                                                                                                                                                           | <p>25. Public interest does not seem, to us, to have any concern in this?</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## DOCUMENT 15.—No. 3—Continued.

## QUESTIONS.

## ANSWERS.

erted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?

26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?

27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?

28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?

29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices?

30. If it would cause you to abandon your business, in what way would you employ your capital?

31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?

32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?

33. Amount of capital; and what proportion the borrowed capital bears to that which is real?

34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; and how gradual the reduction should be?

26. The mere cost of materials and amount paid for labor would give a very erroneous idea of the profits of any manufacture. The interest of capital, numerous contingent expenses, the repairs of machinery, the chance of losses, &c., &c., &c., ought also to be calculated.

27. The subsistence of the men employed, and of their families, and of all those indirectly supported from the manufacture, are agricultural productions. The same number of persons manufacturing the article in Europe would not consume a single pound of American produce.

28. We believe the quantity of gunpowder manufactured annually in the United States to exceed six millions of pounds.

29. We should not abandon our business immediately. The prices of our produce could not, at this time, be reduced by importation. The principal material, saltpetre, being higher in Europe than here. But, as explained in our answer to query No. 23, inevitable ruin would, at some future time, be the consequence of the withdrawing of protection.

30. A capital employed in manufacture consisting principally in water power, buildings, and machinery; the consequence of a reduction of the tariff which would cause the business to be abandoned, would amount to nearly a total loss of the capital.

31. In this case it is difficult to say what would be best to do; if protection be withdrawn a great change will take place in commercial and agricultural business as well as in manufactures.

32. The circle within which the manufacturers of salt and iron, remote from the point of importation, are secured against foreign competition, cannot be specified; when the manufactures are not protected by sufficient duties, the circle extends or contracts in proportion to the fluctuations of the European market, or in consequence of the manufacturers in Europe overtrading themselves, as has been of late the case in England for the manufacture of iron.

33. It makes no difference if the capital involved in a manufactory is borrowed or not: the capital is there, and subject to all risks, no matter who owns it.

34. Besides the 6 per cent. for interest, a capital employed in manufacture must produce enough to keep the works and machinery in repairs, and to insure against fire and

## DOCUMENT 15.—No. 3.—Continued.

| QUESTIONS.                                                                                                                                                                                                     | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 35. If minimums should be abolished, and the duty assessed upon the real value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | against bad debts; otherwise the business would soon be at an end. It must be left to the manufacturer a reasonable compensation for his industry. Any one can run on capital at 6 per cent., and enjoy a much easier life than that of a manufacturer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                            | 35. If the actual value of the imported article in the American port could be fairly established, it would most assuredly be a preferable base for the assessment of duty to the present system of fabricated invoices. It would, however, have the effect of raising the duty in case of over-large importations, and of increasing it when the market would be bare. Cash duties would be the most salutary change, as it would prevent the ruinous of all importations, those made in account of British merchants or manufacturers, who are induced by the credit duties to send here any article of which the sale at home would be injurious to their own market, and which they had better export, no matter what price it will bring. |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                    | 36. See answer No. 35.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 38. Extent of individual or household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                | 37. Almost the whole consumption of gunpowder in the United States is supplied from American manufacture; the small quantity imported being principally requested for the sake of drawback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 39. Average profit of money or capital in the United States?                                                                                                                                                   | 38. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 40. Average rate of wages?                                                                                                                                                                                     | 39. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|                                                                                                                                                                                                                | 40. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

E. J. DUPONT DE NEMOURS &amp; Co.

ELEUTHERIAN MILLS, April 12th, 1832.

## DOCUMENT 15.—No. 4.

Ch. J. Dupont &amp; Co's Woollen Manufactory, New Castle County, Delaware.

| QUESTIONS.                                                                           | ANSWERS.                                 |
|--------------------------------------------------------------------------------------|------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. State of Delaware, New Castle county. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Woollen, water power.                 |
| 3. When established; and whether a joint stock concern?                              | 3. In 1811; not a joint stock concern.   |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power, and machinery?                                                                                                                                                                                                                         | 4. Fifty thousand dollars.                                                                                                                                                                                                                                                                                                                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Thirty thousand dollars.                                                                                                                                                                                                                                                                                                                                                                 |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. No profit.                                                                                                                                                                                                                                                                                                                                                                               |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                               | 7. Annual reduction in the manufactured articles; caused by overtrading of English manufacturers, frauds on the revenue, and the facility afforded by the Government, by allowing credits on duties.                                                                                                                                                                                        |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Supposed to exceed 6 per cent., as the banks loan their capitals at that rate of interest to merchants, agriculturists, and others.                                                                                                                                                                                                                                                      |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Fifty-two thousand dollars; broadcloths, kerseys, and satinets: quality and value vary yearly.                                                                                                                                                                                                                                                                                           |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 60,000 lbs. of wool, 2,500 lbs. of indigo, 1,500 lbs. of glue, madder, alum, copperas and chemicals, dye-woods, &c.: value in American products, over 80 per cent. on the amount manufactured.                                                                                                                                                                                          |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Foreign articles are reduced in value when they find a similar article of American manufacture to compete with it in the market. Cloths of the description manufactured here have fallen considerably, whilst superfine cloths are sold for nearly the same they did ten years ago. Flannels being extensively manufactured in the United States, have fallen more than fifty per cent. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. Sixty persons; men \$20 per month, women \$8, and children \$6.                                                                                                                                                                                                                                                                                                                         |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. Twelve hours per day, throughout the year.                                                                                                                                                                                                                                                                                                                                              |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Supposed to be equal to those employed at factories. In England the persons receive a portion of their support from the poor rates. Men's wages said to be fifty per cent. less, the wages of women and children nearly equal the amount paid here, as there is greater diversity of employment for them.                                                                               |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Three horses.                                                                                                                                                                                                                                                                                                                                                                           |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                                                            | 16. In Philadelphia and Baltimore; thence to the south and west.                                                                                                                                                                                                                                                                                                                            |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. Foreign articles do enter into competition.                                                                                                                                                                                                                                                                                                                                             |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In the United States.                                                                                                                                                                                                                                                                                                                                                                   |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. Are not exported.                                                                                                                                                                                                                                                                                        |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Sold at six and eight months' credit; are usually four months in the hands of agents; the returns are seldom received under twelve months.                                                                                                                                                               |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. The cost of manufactured articles has diminished considerably by the introduction of improved machinery, the last four years the price of the raw material has varied yearly.                                                                                                                            |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Cannot answer. Articles vary in weight, color, and quality. It would be impossible to estimate exactly the relative value of cloths made since the commencement of the establishment. The description of woollen manufactures in the United States have fallen 30 per cent. since the tariff of 1816.    |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The present duties are thought to be sufficient, if properly enforced.                                                                                                                                                                                                                                   |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Think if the duties were paid in cash before the goods leave the custom-house, it would check overtrading.                                                                                                                                                                                               |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. See answer to question 6.                                                                                                                                                                                                                                                                                |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. The price of the raw material is generally considered one-half of the value produced; one-quarter is paid in wages, one-quarter in interest on capital employed, out of coloring, commissions and guarantee in sales, insurance, fuel, light, and wear and tear of machinery.                            |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                              | 27. Above eighty per cent. on the value.                                                                                                                                                                                                                                                                     |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. See report on wool and woollens, if the New York Convention, which is supposed to be a moderate estimate of the capital employed.                                                                                                                                                                        |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices?                                                                                | 29. The woollen manufacture would cease to be pursued in the United States: the property thus vested in buildings and machinery would pass into other hands at an immense sacrifice, and the consumers of woollen goods be at the mercy of English agents, who would have the entire control of the markets. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. Our capital being invested in water power and fixtures, would be totally lost, if forced to abandon the business.                                                                                                                                                                                        |

## DOCUMENT 15.—No. 4—Continued.

| QUESTIONS.                                                                                                                                                                                    | ANSWERS.                                                                                                                                                                                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Is there any pursuit in which you could engage, from which you could derive greater gain even after a reduction of the import to 12½ per cent?                                                | 31. Having no disposable capital left, would not seek other pursuits.                                                                                                                        |
| Are not the manufactures of salt and remote from the points of importation, of foreign competition within a certain circle around them, and what is the extent at circle?                     | 32. Cannot answer.                                                                                                                                                                           |
| Amount of capital; and what proportion the borrowed capital bears to that which is all?                                                                                                       | 33. See questions 4 & 5: think it not relevant: the capital might be all borrowed, and should be entitled to the same protection whether owned by the persons engaged at the factory or not. |
| What amount of reduction in the duty would enable the actual or real capital employed to yield an interest of 6 per cent, how gradual the reduction should be?                                | 34. Cannot say. Capital invested in the woollen business, with the present evasion of the tariff, does not yield six per cent.                                                               |
| If minimums should be abolished, and duty assessed upon the real value of the imported article in the American port, what of ad valorem duty would be equivalent to present with the minimum? | 35. The minimums are evaded; do not know to what extent.                                                                                                                                     |
| What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                               | 36. Cannot answer.                                                                                                                                                                           |
| Proportion which the production by American manufacturer bears to the consumption?                                                                                                            | 37. Suppose the American production of manufactured articles of all kinds to be triple the amount imported.                                                                                  |
| Extent of individual and household manufacture in the United States, and how much is increased since the tariff of 1824?                                                                      | 38. Uninformed on the subject.                                                                                                                                                               |
| Average profit of money or capital in United States?                                                                                                                                          | 39. Cannot answer.                                                                                                                                                                           |
| Average rate of wages?                                                                                                                                                                        | 40. Uninformed on the subject.                                                                                                                                                               |

## DOCUMENT 15.—No. 5.

*Cotton Manufactory, Newcastle County, State of Delaware.*

| QUESTIONS.                                                                                   | ANSWERS.                                                                                                                                           |
|----------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| State and county in which the manufactory is situated?                                       | 1. Delaware State, Newcastle county.                                                                                                               |
| Kind or description of the manufactory; whether water, steam, or other power?                | 2. Cotton spinning, by water power.                                                                                                                |
| When established; and whether a joint concern?                                               | 3. In the year 1814; private property.                                                                                                             |
| Capital invested in ground and buildings, and water power, and in machinery?                 | 4. \$30,000.                                                                                                                                       |
| Average amount in materials, and in cost for the purchase of materials and payment of wages? | 5. Variable. When in full operation about \$10,000 must be apportioned in materials and manufactures on hand, with provision for payment of wages. |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. The first seven years sunk all the capital invested, and the last ten years have recovered about two-thirds of it; though some of the last ten were years of loss: my books will not distinguish between the two kinds of capital.                                                                                                                                                                                                        |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Frequently by competition in the home market the profits are reduced to cost and charges; sometimes (when the business would not have been affected by home competition,) the profits are reduced to nothing, by over-importation of other descriptions of goods causing such a press for money in exports as to put down the price of yarn when the stock in market was not greater than ordinary; and vice versa for increased profits. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Not known to the writer.                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. From 70,000 to 100,000 lbs. cotton yarn per annum; the quantity varying in the year according to the demand in some measure. It is difficult to ascertain the value, as the price has varied since the commencement from sixty-four cents in 1814, to eighteen cents per lb. in 1830.                                                                                                                                                     |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 350 bales of cotton, valued for 1831, at \$10,500; all the produce of the United States.                                                                                                                                                                                                                                                                                                                                                 |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Very little, if any; cotton yarn is imported of the degree of coarseness which is manufactured at this mill.                                                                                                                                                                                                                                                                                                                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. 6 men, average \$6 each per week; 12 women, average \$2 each per week, 25 children, average \$1 25 per week.                                                                                                                                                                                                                                                                                                                             |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. 11 hours per day, exclusive of meals, and about 50 weeks in the year.                                                                                                                                                                                                                                                                                                                                                                    |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Not known to the writer.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. Seven.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. A small portion sold at the factory; the remainder sent 40 miles by land and water conveyance.                                                                                                                                                                                                                                                                                                                                           |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                           | 17. No foreign article of like kind is imported that I know of in latter years; domestic competition has settled that in the reduced price.                                                                                                                                                                                                                                                                                                  |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In Pennsylvania and the southern & western States.                                                                                                                                                                                                                                                                                                                                                                                       |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. None of this kind exported, known to the writer, until woven.                                                                                                                                                                                                                                                                                                                                                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Much the largest part is sold on a credit, generally 6 months, after having been a store sometimes three or four months.                                                                                                                                                                                                                                                                                                                 |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased                                                                                                                                                                                                                 | 21. The cost has decreased both in the material and labor; rather more in the material                                                                                                                                                                                                                                                                                                                                                       |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                     | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>decreased; and how much in each year, in the establishment of the manufactory; whether the increase has been in the materials or the labor, and at what rate?</p>                                                                                                                                                                           | <p>rial; have not sufficient data to answer more particularly; the labor has been rather higher since 1824; material has fluctuated, having been sold some years at 10 to 15 cents, and others at 25 to 30 cents.</p>                                                                                                                                                                                                                                  |
| <p>2. The prices at which the manufactures have been sold by the manufacturer since establishment?</p>                                                                                                                                                                                                                                         | <p>22. In 1814 sixty-four cents per lb., gradually declining till 1820, it was twenty-eight cents; then advancing till 1822, it was 34 or 35 cents; then gradually declining till 1831, it was 18 cents, (except excited prices in 1825, a few months.)</p>                                                                                                                                                                                            |
| <p>3. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p>                                                                                                                                                                                               | <p>23. Not known.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <p>4. What has been the rate of your profits, annually, for the last three years? and if you are a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore divided out annually?</p> | <p>25. Less than four per cent., after providing for necessary proportion of repairs.</p>                                                                                                                                                                                                                                                                                                                                                              |
| <p>5. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p>                                                                                                                                                             | <p>26. About <math>\frac{1}{3}</math> for raw material; <math>\frac{1}{3}</math> for labor in the factory; 1-20, or sometimes 1-15, might be profit; the balance is made up by contingent expenses, wastage, &amp;c., &amp;c.</p>                                                                                                                                                                                                                      |
| <p>6. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                                                                                                         | <p>27. About \$2,000 in value of agricultural and vegetable productions; \$1,000 in domestic dry goods and groceries.</p>                                                                                                                                                                                                                                                                                                                              |
| <p>7. What quantity or amount of manufactures, such as you make, are produced in the United States; and what amount in your own State?</p>                                                                                                                                                                                                     | <p>28. No data to answer from as respects the United States; upwards of 20,000 lbs. of cotton yarn are produced in this county in one week; (no other county in this State manufactures cotton.)</p>                                                                                                                                                                                                                                                   |
| <p>8. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would that cause you to abandon your business, or would you manufacture at reduced prices?</p>                                                                            | <p>29. There can be no question but a <i>present</i> abandonment of business would be the consequence, as manufacturing at reduced prices would soon destroy the capital. All who could hold their property a few years would do an excellent business under such prices, both for raw material and manufactured goods, <i>as British monopoly would then dictate</i>, taken in connexion with the then low prices for bread, and meat, and labor.</p> |
| <p>9. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                                                                                                                                           | <p>30. Under such circumstances, I should have no capital, as purchasers for such property could not be found at any price; but, admitting a very small amount could be realized, agriculture or merchandizing would be the next business, in order to get bread, though both branches are well filled.</p>                                                                                                                                            |

| QUESTIONS.                                                                                                                                                            | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?</p> | <p>31. Certain loss would result, and total ruin would follow such an import duty; and twenty-five cents per day for my manual labor would be better than that; the effect (of such a change in the duties) on agriculture or other business might be to deter a man from engaging in them without the necessary experience, which he could not have if his time had been spent in manufacturing.</p> |

Newcastle, March 10th, 1832.

JACOB PUSEY, *Cotton Spinner*

## DOCUMENT 15.—No. 6.

*John & Alexander Peterson's Tannery, Smyrna, Kent County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1. State and county in which the manufactory is situated?</p> <p>2. Kind or description of the manufactory; and whether water, steam, or other power?</p> <p>3. When established; and whether a joint stock concern?</p> <p>4. Capital invested in ground and buildings, and water power, and machinery?</p> <p>5. Average amount in materials, and in cash for the purchase of materials and payment of wages?</p> <p>6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?</p> <p>7. Cause of the increase, (or decrease, as the case may be,) of profit?</p> | <p>1. Smyrna, Kent county, State of Delaware.</p> <p>2. Tannery; horse power used for grinding bark, for which water power is intended to be substituted this present year.</p> <p>3. Established by Israel Peterson in the year 1782, and now owned by his descendants John &amp; Alexander Peterson.</p> <p>4. The cost of the buildings, <del>etc.</del> mills, pumps, &amp;c. about \$7,500.</p> <p>5. The whole amount of capital invested in the business for purchasing materials, paying wages, and giving the usual credits on sales, for the last three years, has been on the average about \$25,000.</p> <p>6. For several years preceding the year 1819, the profits were large, say from 25 to 33½ per cent., but since 1820 very few establishments were able to maintain themselves, and at least one-half of the tanneries in the county are now unoccupied. Since 1833 the business has been gradually reviving, and now, if judiciously managed, will pay 10 per cent. on the capital invested.</p> <p>7. The large profits during the ten years preceding the year 1819 induced the forming of large establishments in the hemlock forest of New York and Western Pennsylvania, and the general extension of business by them already engaged in it, until the supply ran greatly above the demand, and a consequent fall of prices, which proved ruinous to all, but those of the more favored situations; for the last few years the supply has become less, and the demand increased with the increased consumptions, and a gradual rise in prices taken place.</p> |

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                                                                                                               |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                              | 8. We can give no answer to this question.                                                                                                                                                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                       | 9. Not having kept a register, we cannot give a correct answer to this question.                                                                                                                       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                             | 10. There is expended in the purchase of Spanish or South American hides, annually, from \$ 8,000 to \$ 10,000; hides and skins from the surrounding country about \$ 3,000; bark 300 cords, \$ 3,000. |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                             | 11. We believe there is none of the same kind of articles which is manufactured by us imported from abroad.                                                                                            |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                            | 12. Nine men employed by us; the average wages of whom are about 15 dollars per month.                                                                                                                 |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                            | 13. About ten hours throughout the year, on the average.                                                                                                                                               |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                            | 14. The wages for agricultural laborers in this district is from ten to twelve dollars per month when they board themselves; from five to seven dollars and boarded.                                   |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                             | 15. Four horses employed in grinding bark and milling hides.                                                                                                                                           |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                   | 16. Part at the manufactory, and part in the cities of Philadelphia and New York: distance Philadelphia 60 miles, New York 150 miles.                                                                  |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                  | 17. There is no foreign competition.                                                                                                                                                                   |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. Principally in the United States; some in South America and West Indies.                                                                                                                           |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                    | 19. Some to South America and West Indies in the state it leaves our manufactory, and considerable when manufactured into shoes and boots.                                                             |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. Principally sold on a credit of from four to six months.                                                                                                                                           |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. The cost to the manufacturer has increased by the rise in the prices of foreign hides and of bark.                                                                                                 |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                        | 22. As low as 20 cents and high as 30 cents per pound for sole leather of the same quality, and upper leather at \$ 4 and at \$ 6 50 per hide, calf-skins at \$ 16 and at \$ 30 per dozen.             |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                  | 23. We cannot say, but believe that in the heavy articles we can compete without any duty, so long as foreign hides remain duty free.                                                                  |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                            | 24. None that we know of.                                                                                                                                                                              |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                  |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Perhaps ten per cent.                                                                                                                                                 |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. The raw material cost as 75 to 12<br>wages as - - - 15 to 18<br>profits on capital as - - 10 to 12                                                                    |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. Consumed by the family, horses, &c. in corn, flour, pork, beef, butter, &c., at \$ 800; in domestic fabrics, woollens, cottons, &c. \$ 200; making annually \$ 1,000. |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Not knowing cannot say.                                                                                                                                               |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices?                                                                                | 29. We think a reduction of duty would have no effect on the prices of the riches manufactured by us.                                                                     |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. The 29th answers this.                                                                                                                                                |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. The 29th answers this.                                                                                                                                                |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. Not in our line.                                                                                                                                                      |
| 33. Amount of capital, and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                               | 33. Ditto.                                                                                                                                                                |

We leave the last eleven questions unanswered, feeling unable to give any information.  
SMYRNA, March 9, 1832.

JOHN & ALEX. PETERSON.

| QUESTIONS.                                                                                                                                                                                                                                                                                         | ANSWERS.                                                                                                                                                                                                                                                                                                                                             |                                                 |         |                     |      |         |       |                            |          |              |       |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------|---------|---------------------|------|---------|-------|----------------------------|----------|--------------|-------|
| 1. Kind or description of the manufactory; whether water, steam, or other power?                                                                                                                                                                                                                   | 2. Blast furnace for the purpose of converting bog ore into castings and pigs,—it goes by water power                                                                                                                                                                                                                                                |                                                 |         |                     |      |         |       |                            |          |              |       |
| 2. When established, and whether a joint concern?                                                                                                                                                                                                                                                  | 3. In the year 1817: it is an individual concern.                                                                                                                                                                                                                                                                                                    |                                                 |         |                     |      |         |       |                            |          |              |       |
| 3. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                    | 4. Fifteen thousand dollars.                                                                                                                                                                                                                                                                                                                         |                                                 |         |                     |      |         |       |                            |          |              |       |
| 4. Average amount in materials, and in the purchase of materials and payment of wages?                                                                                                                                                                                                             | 5. About twenty-four thousand dollars for a blast of about 9 months.                                                                                                                                                                                                                                                                                 |                                                 |         |                     |      |         |       |                            |          |              |       |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest on it; and the rate of profit upon that portion which is not borrowed? | 6. The profits of the establishment are such as are derived from the payment of a part of the wages: cost of the raw materials and transportation of them to the furnace in merchandise instead of cash,—were the whole expenditures to be paid in cash, the profit would be nothing,—probably it might be set down as a losing concern.             |                                                 |         |                     |      |         |       |                            |          |              |       |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                             | 7. The fluctuations of the market, and want of steady sales at some fixed price: it is not so material what the price is, as that it should be fixed, and the demand steady; wages and cost of raw materials cannot be made to fluctuate with the prices of the articles.                                                                            |                                                 |         |                     |      |         |       |                            |          |              |       |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                     | 8. The profit derived from the employment of capital in this county, arise chiefly from the causes enumerated in the 6th query, and are small.                                                                                                                                                                                                       |                                                 |         |                     |      |         |       |                            |          |              |       |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                              | 9. 300 tons pig, and 300 tons of castings, chiefly stove castings, although pipes for the conveyance of water and machinery have been made in some quantities for a few years past; pigs are now worth \$30 per ton, castings from 50 to 60 dollars per ton: ten years since castings were worth from 75 to 80 dollars, and pigs 45 dollars per ton. |                                                 |         |                     |      |         |       |                            |          |              |       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                    | <table> <tr> <td>10. 180,000 bus. charcoal, at \$50 per thousand</td><td>\$9,000</td></tr> <tr> <td>2,000 tons bog ore,</td><td>3 75</td></tr> <tr> <td>per ton</td><td>7,500</td></tr> <tr> <td>7,000 bush. oyster shells,</td><td>8 c. 560</td></tr> <tr> <td>Hands' wages</td><td>7,000</td></tr> </table>                                        | 10. 180,000 bus. charcoal, at \$50 per thousand | \$9,000 | 2,000 tons bog ore, | 3 75 | per ton | 7,500 | 7,000 bush. oyster shells, | 8 c. 560 | Hands' wages | 7,000 |

| Hands' wages                                                                                                                                                                                                                                                                                       | 7,000                                                                                                                                                                                                                                                                                                                                                |                                                 |         |                     |      |         |       |                            |          |              |       |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                    | <p>All domestic products \$34,060</p> <p>11. I believe that similar articles are imported from England at about the same prices as are enumerated in the 9th query.</p>                                                                                                                                                                              |                                                 |         |                     |      |         |       |                            |          |              |       |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                  | 12. 35 furnacemen and 10 boys; wages of men, 12 to 30, average 18 dollars, boys 6 dollars per month. 45 men coaling, ore raising, wood-chopping and hauling, whose wages are included in the cost of coal and ore in the 10th query.                                                                                                                 |                                                 |         |                     |      |         |       |                            |          |              |       |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                   | 13. 24 hours per day by a double set of hands for 9 months in the year.                                                                                                                                                                                                                                                                              |                                                 |         |                     |      |         |       |                            |          |              |       |
| 14. Rate of wages of similar classes otherwise employed in the same State and county; and in other States; and in foreign countries?                                                                                                                                                               | 14. There is no other furnace in the county: the rate of wages in foreign countries is not known.                                                                                                                                                                                                                                                    |                                                 |         |                     |      |         |       |                            |          |              |       |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Thirty horses, or thirty-five mules.                                                                                                                                                                                                                                                                                                                                                   |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Boston, New York, Philadelphia, Baltimore, Washington City, and Norfolk.                                                                                                                                                                                                                                                                                                               |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                                                                  | 17. They certainly do; but to what extent I am not informed.                                                                                                                                                                                                                                                                                                                               |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Through every part of our widely-tended country.                                                                                                                                                                                                                                                                                                                                       |
| 19. Whether any of the manufactures are exported to foreign countries? And if so, where?                                                                                                                                                                                                                                                   | 19. I believe none are exported.                                                                                                                                                                                                                                                                                                                                                           |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Generally on a year's credit; sometimes bartered and sometimes cash, at 60 or 90 days.                                                                                                                                                                                                                                                                                                 |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. The cost has decreased, though not materially; the decrease has been a labor.                                                                                                                                                                                                                                                                                                          |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Answered in the 9th query.                                                                                                                                                                                                                                                                                                                                                             |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. A sufficient duty to secure the home market; competition will reduce the price to a bare living profit. We have sufficient of the raw material to supply the work, and capital, skill, and enterprise enough to manufacture it; furthermore, the regions in which the raw material abounds are sterile and unfit for cultivation, consequently, totally useless for any other purpose. |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. I cannot say; but I have been informed that wrought iron is fraudulently entered under names calling for a less duty, thereby evading the duty.                                                                                                                                                                                                                                        |
| 25. What has been the rate of your profits, annually, for the last three years? And if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Answered in the 6th query.                                                                                                                                                                                                                                                                                                                                                             |
| 26. What portion of the cost of your manufactures consists of the price of the raw material; what portion of the wages of labor; and what portion of the profits of capital?                                                                                                                                                               | 26. The cost is chiefly wages, say 9-10ths the ore in the bed and coal and wood used will not amount to more than 1-10th. The profits as before stated arise from a small part of the cost in merchandise on which a reasonable profit is made instead of cost is inconsiderable.                                                                                                          |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                              | 27. Very considerable. The whole consumption is either agricultural or domestic; the 9-10ths paid for wages is again paid in subsistence chiefly.                                                                                                                                                                                                                                          |

DOCUMENT 15.—No. 7—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. What quantity or amount of manufactures, such as you make, are produced in the United States; and what amount in your own State?                                                                                                                                                                                                                     | 28. There is no other manufactory of the kind in this State: I am unable to say what amount is produced in the United States.                                                                                                                                                                                                                                                                                           |
| 2. If the duty upon the foreign manufacture of the kind of goods which you make is reduced to 12½ per cent. with a corresponding reduction on all the imports, would you use you to abandon your business, or would you manufacture at reduced prices?<br>3. If it would cause you to abandon your business, in what way would you employ your capital? | 29. I must abandon the business; the corresponding reduction on all imports would avail me nothing; and foreign capital would undoubtedly be wielded to sacrifice the American manufacturer, to give them the monopoly.<br>30. In agriculture, which is already overburdened: by abandoning my business I should transfer 80 men, chiefly heads of families, from the consuming to the producing part of the community. |
| 4. Is there any pursuit in which you could engage, from which you could derive greater income even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                                             | 31. Perhaps not; were the import duties reduced to 12½ per cent., while foreign nations retained duties from 50 to 1500 per cent. on all our productions, I think it would be perfectly indifferent to me whether I starved doing nothing, or starved while endeavoring to get a living at any other pursuit.                                                                                                           |
| 5. Are not the manufactures of salt and iron remote from the points of importation, of foreign competition within a certain circle round them, and what is the extent of that circle?                                                                                                                                                                   | 32. The manufacturers of salt and bar iron on a small scale are undoubtedly remote from foreign competition in their immediate neighborhoods, but the manufacturer of cast iron from the raw material must necessarily do so extensive a business with cities remote from his neighborhood, as to deprive him of any such advantage.                                                                                    |
| 6. Amount of capital: and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                                             | 33. Not less than forty thousand dollars real capital, as the expenses are chiefly paid previous to receiving the proceeds of a year's work.                                                                                                                                                                                                                                                                            |
| 7. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; how gradual the reduction should be?                                                                                                                                                                                    | 34. If a reduction of duties are made, the capital must of necessity be sacrificed or withdrawn.                                                                                                                                                                                                                                                                                                                        |
| 8. If minimums should be abolished, and duty assessed upon the real value of the imported article in the American port, what would ad valorem duty would be equivalent to the present with the minimum?                                                                                                                                                 | 35. I cannot say.                                                                                                                                                                                                                                                                                                                                                                                                       |
| 9. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                                                                                                      | 36. I cannot answer.                                                                                                                                                                                                                                                                                                                                                                                                    |
| 10. Proportion which the production by American manufacturers bears to the consumption?                                                                                                                                                                                                                                                                 | 37. I have not the means at hand of answering this query: it has received an able answer from the Convention at New York.                                                                                                                                                                                                                                                                                               |
| 11. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                                                                                                        | 38. I am not informed.                                                                                                                                                                                                                                                                                                                                                                                                  |

Respectfully, yours, &amp;c.

WM. D. WAPLES.

## DOCUMENT 15.—No. 8.

*Alexander V. Murphy's Woollen Manufactory, Kent County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                         | ANSWERS.                                                                                                                                                                                                                                                                                                        |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                          | 1. Delaware State, Kent county.                                                                                                                                                                                                                                                                                 |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                               | 2. Wool and black-oak bark, by water power.                                                                                                                                                                                                                                                                     |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                            | 3. The wool factory established in 1824 by an individual, enlarged by a firm in 1828, and in 1828 an individual continued the wool, and in addition established a manufactory of the quercitron bark.                                                                                                           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                    | 4. Ground and buildings \$5,000; water power and machinery \$1,600.                                                                                                                                                                                                                                             |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                    | 5. Three hundred dollars.                                                                                                                                                                                                                                                                                       |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit on that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Annual rate of profit upon the capital invested in the woollen concern from 1825 until 1824, 12 per cent.; from 1824 until 1828, eight per cent.; from 1828 until 1831, six per cent. On the capital invested in the bark in 1828 and 1829, 50 per cent.; and in 1830 and 1831 not any. No capital borrowed. |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                            | 7. Decrease caused by a supply of the same kind of goods at lower prices.                                                                                                                                                                                                                                       |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                     | 8. Only a small capital employed at 60 per cent.                                                                                                                                                                                                                                                                |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                              | 9. 2,090 yards coarse cloths, kerseys, and satinets; average value say 60 cents per yard.                                                                                                                                                                                                                       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                    | 10. 2,000 pounds coarse wool, raised principally in the neighborhood.                                                                                                                                                                                                                                           |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                  | 12. One man at \$10 per month; four apprentice boys from 12 to 21 years old; three children.                                                                                                                                                                                                                    |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                   | 13. Ten hours per day from the first of May until the last of December.                                                                                                                                                                                                                                         |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                   | 14. Wages of men hands employed in the same county and State \$7 per month.                                                                                                                                                                                                                                     |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                    | 15. Three horses.                                                                                                                                                                                                                                                                                               |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                          | 16. Market principally at or near home.                                                                                                                                                                                                                                                                         |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                         | 17. Foreign articles not so much competition as the domestic manufacture.                                                                                                                                                                                                                                       |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                           | 18. In the neighborhood.                                                                                                                                                                                                                                                                                        |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                          | 19. The quercitron bark nearly all exported to Europe.                                                                                                                                                                                                                                                          |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                         | 20. Bartered for wool and merchandise, and fixtures consumable in the establishment.                                                                                                                                                                                                                            |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                              |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate?                                                                                | 21. But little variation in the labor or material.                                                                                                                    |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                     | 22. From the commencement of the establishment kersey was generally sold for \$ 1 25 per yard, until after the year 1824; since that time to the present at 75 cents. |
| 25. What has been the rate of your profits annually for the last three years? And if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Six per cent. on the wool capital, and averaging ten per cent. on the bark capital.                                                                               |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                            | 27. Agricultural productions to the amount of \$ 300.                                                                                                                 |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                            | 31. Yes.                                                                                                                                                              |

## DOCUMENT 15.—No. 9.

*Quercitron Bark Manufactory, Kent County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Kent county, State of Delaware.                                                                                                                                                              |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Quercitron bark, by water power.                                                                                                                                                             |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. At different dates, since 1815.                                                                                                                                                              |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                                                          | 4. Eleven thousand dollars.                                                                                                                                                                     |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. The cost for purchase of the rough bark, and payment of wages for manufacturing, and cost of packages, \$30,650.                                                                             |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. From 1815 to 1829 the annual profit would have amounted to 33½ per cent. on all the capital employed: since 1829, a loss of 10 per cent. may be considered as sustained by the manufacturer. |

| QUESTIONS.                                                                                                                                                                   | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                      | 7. The cause of decrease in profits may be alleged to a superfluous quantity being manufactured, and to the late discovery of a mineral substitute.                                                                                                                                                                                                                                                                          |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                        | 9. Say 1,500 tons; average value per ton, \$40; amounting to \$60,000 annually since 1829.                                                                                                                                                                                                                                                                                                                                   |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                              | 11. None imported.                                                                                                                                                                                                                                                                                                                                                                                                           |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                            | 12. Say fifty able-bodied men; average wages, seventy-five cents per day.                                                                                                                                                                                                                                                                                                                                                    |
| 13. How many hours a day employed, and what portion of the year?                                                                                                             | 13. Twelve hours each day, and nearly the whole year.                                                                                                                                                                                                                                                                                                                                                                        |
| 14. Rate of wages of similar classes otherwise employed in the same State and county?                                                                                        | 14. At agricultural avocations, thirty cents and a half cents per day.                                                                                                                                                                                                                                                                                                                                                       |
| 15. Number of horses or other animals employed?                                                                                                                              | 15. Fourteen to twenty                                                                                                                                                                                                                                                                                                                                                                                                       |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                    | 16. All shipped to New York and Philadelphia.                                                                                                                                                                                                                                                                                                                                                                                |
| 18. Where are the manufactures consumed?                                                                                                                                     | 18. In Great Britain, France, Prussia, Germany, and in the New England manufacturing States.                                                                                                                                                                                                                                                                                                                                 |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                     | 19. To Great Britain, France, Prussia, Germany.                                                                                                                                                                                                                                                                                                                                                                              |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital? | 26. Raw material eighteen thousand dollars; wages paid for labor and other expenses, twelve thousand six hundred and fifty dollars.                                                                                                                                                                                                                                                                                          |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                | 27. Of agricultural products consumed, six thousand six hundred and fifty dollars; domestic productions, three thousand dollars.                                                                                                                                                                                                                                                                                             |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                         | 28. In the State of Delaware, say fifty thousand dollars.                                                                                                                                                                                                                                                                                                                                                                    |
| 38. Extent of individual and household manufacture in the State of Delaware, and how much it has increased since the tariff of 1824?                                         | 38. The low price at which cotton yarn is now sold, occasioned by the improvement in its manufacture, has occasioned a considerable increase in household manufacturing, to the fully one-half of our agricultural cotton is clothed with the products of their own industry, especially as regards their winter apparel; and household manufacturing has increased at least twenty-five per cent. since the tariff of 1824. |

JOS. G. OLIVER

KENT COUNTY, Delaware.

## DOCUMENT 15.—No. 10.

*John M. Darby's Tannery and Shoe Factory, Kent County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                                            | 1. Kent county, Delaware.                                                                          |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                                                 | 2. Tannery and shoe factory; tannery by horse power.                                               |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                                              | 3. In the year 1824; an individual concern.                                                        |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                                                      | 4. Worth and valued at three thousand dollars.                                                     |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                                                                                                     | 5. Average amount of materials \$7000, average amount of wages \$2500.                             |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                                                              | 7. The demand of the articles.                                                                     |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                                                | 9. From 10 to 12,000 dollars annually; first and second quality.                                   |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                                                      | 10. Foreign hides, amount \$3000; domestic \$1500; bark, leather, and other raw materials, \$5000. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                    | 12. Men and boys 20; from 15 to \$20.                                                              |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                     | 13. Ten hours; twelve months.                                                                      |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                     | 14. From 8 to \$12 in this county.                                                                 |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                      | 15. Three horses, two oxen.                                                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                                                                                            | 16. Half at Philadelphia, half at home.                                                            |
| 17. Whether foreign articles of the like kinds enter into competition with them at each place of sale, and to what extent?                                                                                                                                                                                                           | 17. None.                                                                                          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                             | 18. In the United States.                                                                          |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, what credit? if bartered, for what?                                                                                                                                                                                                              | 20. From four to six months' credit.                                                               |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                          | 21. Annual increase of two per cent. occasioned by demand.                                         |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                 | 22. Sole leather from 22 to 27 cents; upper leather from \$3 50 to \$4 25 per side.                |
| 25. What has been the rate of your profits annually for the last three years? and if it be joint stock company, what dividends have been received, and what portion of the income of the company has been converted in fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. From fifteen to twenty per cent.                                                               |

| QUESTIONS.                                                                                                                                                                   | ANSWERS.                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital? | 26. Raw material half; labor one-fourth |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                | 27. Two thousand dollars.               |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                               | 30. I am not prepared to answer.        |

JOHN M. DAREY.

MILFORD, Kent County, Delaware, March 7, 1832.

## DOCUMENT 15.—No. 11.

Thomas Clark's Tannery, Frederica, Kent County, Delaware.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Frederica, Kent county, and State of Delaware.                                                                                                                                   |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Tanning of Spanish ox and horse hides, together with all kinds of country hides and skins, with horse power.                                                                     |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1792 stocked in various ways, in 1815 my brother and self commenced with a joint stock, and continued until 1831, then stocked by myself.                                     |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. In ground and building \$5,000; no water power: stone mills and patent iron bat mills \$200.                                                                                     |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Materials \$8,000; wages not more than \$200; the hands being all my own, with no currier on wages.                                                                              |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. The stock since March 12, 1831, has given 10 per cent.                                                                                                                           |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. The decrease heretofore was owing to the overstock and the high duty abroad: as there is at this time some rise, owing to the old stock being worked off, and less manufactured. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Don't know.                                                                                                                                                                      |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Twelve thousand dollars.                                                                                                                                                         |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>1. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?</p> <p>2. Cost in the United States of similar articles of manufacture imported from abroad, from what countries?</p> <p>3. Number of men, women and children employed, and average wages of each class?</p> <p>3. How many hours a day employed, and at what portion of the year?</p> <p>4. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?</p> <p>5. Number of horses or other animals employed?</p> <p>6. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?</p> <p>17. Whether foreign articles of the like kind enter into competition with them at the place of sale, and to what extent?</p> <p>18. Where are the manufactures consumed?</p> <p>19. Whether any of the manufactures are exported to foreign countries? and if so, where?</p> <p>20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, what credit? if bartered, for what?</p> <p>21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year since the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?</p> <p>22. The prices at which the manufactures have been sold by the manufacturer since the establishment?</p> <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p> <p>24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?</p> <p>25. What has been the rate of your profits, annually, for the last three years? and if it is a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p> <p>27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?</p> <p>40. Average rate of wages?</p> | <p>10. 250 cords of bark, from \$5 to \$12<sup>50</sup> per cord; \$3,000 in domestic hides; \$3,500 or \$3,600 in South America or Spanish hides.</p> <p>11. Don't know.</p> <p>12. Five men and two boys.</p> <p>13. All the year.</p> <p>14. In our State eighty dollars.</p> <p>15. Three horses.</p> <p>16. About one-third is sold at the yard, and the balance sent to Philadelphia, one hundred miles.</p> <p>17. No foreign.</p> <p>18. Principally in the middle States.</p> <p>19. Some are exported to South America.</p> <p>20. Some are bartered for hides, some sold for cash, and the larger part are sold at four and six months.</p> <p>21. No material alteration has taken place only in bark.</p> <p>22. Sole leather for 23 to 26 cents per lb. and country hides four to six dollars per hide.</p> <p>23. Don't know.</p> <p>24. Don't know.</p> <p>25. My profit has been as near 10 per cent. as I can compute it.</p> <p>27. Five thousand five hundred dollars.</p> <p>40. From eight to ten dollars.</p> |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                               | ANSWERS.                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                                                | 1. Delaware, Kent county.                                       |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                                                     | 2. Sole and upper leather; horse power.                         |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                                                                  | 3. 1829; joint concern.                                         |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                                                          | 4. Eight hundred dollars.                                       |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                                                          | 5. Two thousand dollars.                                        |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?                                     | 6. Five hundred and fifty dollars.                              |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                                                                  | 7. Increased about 10 per cent.                                 |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                        | 12. Two men, at \$1 25 per annum.                               |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                                                         | 13. From sun to sun, all the year.                              |
| 14. Rate of wages of similar classes otherwise employed in the same State, and county, in other States, and in foreign countries?                                                                                                                                                                                                        | 14. About the same as at this business.                         |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                          | 15. One horse.                                                  |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                                                                                                | 16. Principally sent to Philadelphia, about 100 miles.          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                 | 18. Cannot say; but presume in the United States.               |
| 20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                              | 20. Generally at a credit of four weeks, or bartered for hides. |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate?                                                                                | 21. Cannot say, certainly.                                      |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                     | 22. Sole leather about 26 cents; upper about four dollars.      |
| 25. What has been the rate of your profits annually for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. We have made no dividend.                                   |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                            | 27. About two hundred dollars.                                  |

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| 1. If the duty upon the foreign manufacture of the kind of goods which you make is reduced to 12½ per cent, with a corresponding reduction on all the imports, would you use you to abandon your business, or would you manufacture at reduced prices? | 29. I would abandon the business, as I cannot afford to manufacture at a reduced price. |
| 2. If it would cause you to abandon your business, in what way would you employ capital?                                                                                                                                                               | 30. The best way I could, but do not know what.                                         |
| 3. Are not the manufactures of salt and remote from the points of importation, of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                      | 32. Does not immediately concern my business.                                           |
| 4. Amount of capital; and what proportion the borrowed capital bears to that which is not borrowed?                                                                                                                                                    | 33. About two thousand dollars; none borrowed.                                          |
| 5. Average rate of wages?                                                                                                                                                                                                                              | 40. About \$5 50, board, washing, and mending, per month.                               |

## CATLIN &amp; GREEN.

*Note.*—There are two small tanning concerns in Kent county, of about the same extent as foregoing; one at Georgetown, the other at Canterbury: but as they were 8 or 10 miles from my way, and had been sufficiently described to me, I did not deem it necessary to visit them.

J. A. SPARKS.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Kent county, Delaware.                                                                                        |
| 2. Kind or description of the manufactory; whether water, steam, or other power?                                                                                                                                                                                                                     | 2. Manual labor.                                                                                                 |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Joint stock at present, and has been since 1826; established by one of the firm in 1915.                      |
| 4. Capital invested in ground and buildings, water power and machinery?                                                                                                                                                                                                                              | 4. Ground and buildings, viz. coach shop, plater's and blacksmith shops, and other out buildings, value \$2,500. |
| 5. Average amount in materials, and in labor for the purchase of materials and payment of wages?                                                                                                                                                                                                     | 5. From fourteen to fifteen thousand dollars.                                                                    |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of interest upon that portion of the capital which is borrowed, after providing for the interest on it, and the rate of profit upon that portion which is not borrowed? | 6. About 15 per cent.: capital is all blended, as four-fifths of the manufactured articles is sold on a credit.  |

| QUESTIONS.                                                                                                                                                                                                                                                | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                    | 7. The cause of the increase is owing to the experience in the business, and the improvement in the labor.                                                                                                                                                                                                                                                                                            |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                     | 9. At the commencement, in 1825, the articles were at least 30 per cent. higher than at this time; then the amount annually, for the first one or two years, was about \$4,000 but a gradual increase has made the sum now, though the articles are sold 30 percent lower, to \$24,000 and upwards per annum. Articles manufactured are coaches, sleighs, dearborns and gigs, sulkeys, &c.            |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                           | 10. Of iron, about twelve tons, about one-sixth is English or foreign, for the only, - \$1.20<br>One hundred to 120 yards blue cloth, principally English, - 50<br>Muslins, linings, \$150; hardware, viz screws, tacks, nails, &c. \$200; morocco, \$250; leather, \$2,000; all domestic, - 2.50<br>Paints, oil, &c., lumber, plated ware, &c., &c., - 7.50<br>As near as can be ascertained, \$5.20 |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                         | 12. Twelve men at an average of \$280, making - \$3,360<br>Twenty boys and laborers, at \$15, - 300<br>\$3,660                                                                                                                                                                                                                                                                                        |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                          | 13. From first March to first October, 11 hours; first October to first March, 12 hours.                                                                                                                                                                                                                                                                                                              |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                           | 15. Four horses.                                                                                                                                                                                                                                                                                                                                                                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                 | 16. A part at the manufactory; the balance sold in Maryland, Virginia, Georgia, North Carolina, and territory of Florida.                                                                                                                                                                                                                                                                             |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                 | 17. We never have come in competition with foreign articles.                                                                                                                                                                                                                                                                                                                                          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                  | 18. United States.                                                                                                                                                                                                                                                                                                                                                                                    |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                  | 19. None.                                                                                                                                                                                                                                                                                                                                                                                             |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                    | 20. On a credit of from six months to two years, in part for cash, considerable in law for horses, cattle, and agricultural produce.                                                                                                                                                                                                                                                                  |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate? | 21. There has been but little variation in the cost of the article; if any change, it has decreased; and that in the labor being lower, by an increase of workmen in the improvement in the trade.                                                                                                                                                                                                    |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                     | ANSWERS.                                                                                                                                                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>25. What has been the rate of your profits, annually, for the last three years? and if it be joint stock company, what dividends have been received, and what portion of the income of the company has been converted into paid capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p> | <p>25. About 15 per cent.; there has not been any dividends; we simply draw out of the firm for the support of our families.</p>                                                                         |
| <p>26. What portion of the cost of your manufactures consists of the price of the raw material; what portion of the wages of labor, and what portion of the profits of capital?</p>                                                                                                                                                            | <p>26. The cost of the materials is about 60 to 65 per cent., and the wages for labor about 35 to 40 per cent.</p>                                                                                       |
| <p>27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                                                                                                           | <p>27. About 900 bushels Indian corn, 150 bushels oats, 50 barrels flour, 200 bushels potatoes, 8,000 weight pork, 5,000 weight beef, veal, and mutton.</p>                                              |
| <p>28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?</p>                                                                                                                                                                                                    | <p>28. Supposed in Delaware about \$70,000.</p>                                                                                                                                                          |
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would that cause you to abandon your business; or could you manufacture at reduced prices?</p>                                                                           | <p>29. In consequence of the cheapness of labor in England, we should have to abandon our business; as a very small part of our materials are imported, and we could not compete in labor with them.</p> |
| <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                                                                                                                                          | <p>30. A very difficult question to answer. If all the manufacturing capital was turned into a different channel, we know not what we could get at to make a subsistence.</p>                            |
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?</p>                                                                                                                                                                          | <p>31. We know of none.</p>                                                                                                                                                                              |

BENSON & CATTS,  
Coachmakers.

SMYRNA, DELAWARE, March 14, 1832.

**DOCUMENT 15.—No. 14.**  
*Manufactories of Leather in Kent County, Delaware.*

| Manufacturers' Names. | Capital. | Amount invested in ground, building, water power, & machinery. | Amount in materials, &c. | Value of articles annually manufactured. | Number of workmen employed. | Wages.   | Number of horses. | Profits.   | Value agricultural products and domestic productions. |

## DOCUMENT 15.—No. 15.

*Leather Manufactory, Sussex County, State of Delaware.*

## QUESTIONS.

1. State and county in which the manufactory is situated?
2. Kind or description of the manufactory; and whether water, steam, or other power?
3. When established; and whether a joint stock concern?
4. Capital invested in ground and buildings, and water power and machinery?
5. Average amount in materials, and in cash for the purchase of materials and payment of wages?
6. Annual rate of profit on the capital invested, since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?
7. Cause of the increase (or decrease, as the case may be,) of profit?
8. Rates of profit on capital otherwise employed in the same State and county?
9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?
10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?
11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?
12. Number of men, women, and children employed, and average wages of each class?
13. How many hours a day employed; and what portion of the year?
14. Rate of wages of similar classes otherwise employed in the same State and county; in other States, and in foreign countries?
15. Number of horses, or other animals employed?
16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?
17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?
18. Where are the manufactures consumed?
19. Whether any of the manufactures are exported to foreign countries? and if so, where?
20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?

## ANSWERS.

1. Sussex county, Delaware.
2. Leather. Horse power.
3. 15 years; alone.
4. \$1,000.
5. 500 stock and materials; one bank \$60 per annum; bark grinder 2 dolls. per month.
6. \$150 profit.
7. About regular.
8. Can't say.
9. Common country leather.
10. Can't say.
11. Can't say.
12. 2 men: one is my son; 1 boy.
13. From daylight till dark, all the year.
14. About 60 dollars.
15. 1 horse.
16. Sold at the manufactory; occasional lots of upper sent to Philadelphia, via Georgetown or Milton.
17. Can't say.
18. In the neighborhood.
19. No.
20. Sold for cash, and country produce.

| QUESTIONS.                                                                                                                                                                                                                                                | ANSWERS.                                                            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate? | 21. Can't say.                                                      |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                      | 22. Sole leather from 25 to 30 cts.; upper \$1 50 to 3 00 per side. |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                | 23. Can't say.                                                      |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                          | 24. Can't say.                                                      |

| QUESTIONS.                                                                                                                                                                                                                                                                                        | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                         | 1. Sussex county, in the State of Delaware.                                                                                                                                                                                                                                                                                                                                      |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                              | 2. Sole leather; horse power.                                                                                                                                                                                                                                                                                                                                                    |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                           | 3. About the year 1811; till within three years, it was a joint stock concern: now owned exclusively by the said John Edwards.                                                                                                                                                                                                                                                   |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                   | 4. The yard is under an annual rent of \$150; the capital invested in machinery is considerable, say \$150.                                                                                                                                                                                                                                                                      |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                   | 5. I purchase, annually, \$2,000 worth of bark; \$8,000 worth of Spanish hides, &c. I pay for wages, labor, horse hire, &c., \$2,000 annually.                                                                                                                                                                                                                                   |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. To this question I cannot give a satisfactory answer, but for the last three years within that period I calculate, that, clear of the expenses of the yard, I make \$1,000 annually, or about 33 per cent. on the amount of capital invested: the difference between the rate of profit on that portion of the capital borrowed and that which is not borrowed is 6 per cent. |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                            | 7. Profits have increased within the last two or three years: the number of tanners has been very considerably diminished within a few years; the capital invested, by means so great, and the demand has gradually increased, owing to the increasing trade and population of the country.                                                                                      |

## QUESTIONS.

Rates of profit on capital otherwise em-  
ployed in the same State and county?

Amount of articles annually manufac-  
tured since the establishment of the manu-  
factory? Description, quality, and value of  
kind?

Quantity and value of different kinds  
of materials used, distinguishing between  
foreign products and domestic products?

Cost in the United States of similar ar-  
ticles of manufacture imported from abroad,  
from what countries?

Number of men, women, and children  
employed, and average wages of each class?

How many hours a day employed, and  
portion of the year?

Rate of wages of similar classes  
otherwise employed in the same State and  
county, in other States, and in foreign coun-  
tries?

Number of horses or other animals em-  
ployed?

Whether the manufactures find a mar-  
ket at the manufactory? If not, how far they  
sent to a market?

Whether foreign articles of the like  
kind enter into competition with them at  
a place of sale, and to what extent?

Where are the manufactures consumed?

Whether any of the manufactures are  
exported to foreign countries? and if so, where?

Whether the manufacture is sold by  
manufacturer for cash? and if on credit,  
what credit? if bartered, for what?

Whether the cost of the manufactured  
article (to the manufacturer) has increased  
or decreased; and how much in each year  
since the establishment of the manufactory;  
whether the increase has been in the ma-  
terial or labor, and at what rate?

The prices at which the manufactures  
have been sold by the manufacturer since  
the establishment?

What rate of duty is necessary to en-  
able the manufacturer to enter into competition  
in the home market with similar articles im-  
ported?

Is any change necessary in levying or  
extending the duty on such articles to pre-  
vent fraud?

What has been the rate of your pro-  
fits annually, for the last three years? and if  
you are a joint stock company, what dividends  
have been received, and what portion of the  
income of the company has been converted  
into fixed capital, or retained as a fund for  
contingent or other objects, and therefore  
divided out annually?

## ANSWERS.

8. I suppose the profits are about equal to  
those stated in No. 6.

9. Annual amount of manufactured sole  
leather about \$15,000.

10. I deal exclusively in Spanish hides—  
See No. 5.

11. Can't say.

12. About six steady workmen, upon an  
average of \$15 per month. I have in family  
12 persons depending on my business.

13. From sunrise to sunset; allowing one  
hour for each meal of victuals in the day.

14. Can't say.

15. Three horses.

16. I sell my manufactured leather in Phi-  
ladelphia; distance 110 miles.

17. I believe there is no foreign competi-  
tion.

18. All every-where abouts.

19. Don't know.

20. Generally upon a credit of from 3 to  
6 months; frequently barter the manufactu-  
red article for raw hides, allowing cash value  
for both articles.

21. The manufactured article has increas-  
ed in value for the last two or three years;  
cost for labor has also increased; both, upon  
an average of, say 5 per cent. per annum.

22. I once obtained 30 cents per lb. for  
sole leather by the wholesale. This is the  
highest price; the lowest for which I have  
sold is 22 cents.

23. Can't say.

24. Not that I know of.

25. Profits average as No. 5. Accumula-  
ting capital invested in the business of the  
yard.

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                | 26. 1st. \$10,000; 2d. \$2,000; 3d. \$3,000. expenses to be deducted.—See No. 6                                                                                              |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                               | 27. Corn and fodder for horses, about \$200, besides my family expenses, and the expenses of my laborers.                                                                    |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                        | 28. Not knowing can't say.                                                                                                                                                   |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices? | 29. I should hold on, and do the best I could.                                                                                                                               |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                              | 30. Turn politician; offer for <del>share</del> and get an office; or become a nullifier of such laws.                                                                       |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                               | 31. Can't tell.                                                                                                                                                              |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                 | 32. Don't know.                                                                                                                                                              |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                | 33. Answered before.—See Nos. 5, 6, &c.                                                                                                                                      |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                                                                                   | 34. Don't know. I am opposed to reductions: the mechanics and laborers ought to be supported.                                                                                |
| 35. If minimums should be abolished, and the duty assessed upon the real value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                              | 35. Can't say.                                                                                                                                                               |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                         | 36. Know not.                                                                                                                                                                |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                 | 37. Unable to say.                                                                                                                                                           |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                            | 38. Individual and household manufactures have been pretty considerable; since 1824 we have increased in population about 2,000,000: I am friendly to internal improvements. |
| 39. Average profit of money or capital in the United States?                                                                                                                                                                                                | 39. Vast sight too much to calculate.                                                                                                                                        |
| 40. Average rate of wages?                                                                                                                                                                                                                                  | 40. Don't know; different, as it respects the particular branch of industry.                                                                                                 |

JOHN RICHARDS.

## DOCUMENT 15.—No. 17.

*Hall and Hazzard, Tannery, Millon, Sussex County, Delaware.*

## QUESTIONS.

## ANSWERS.

1. State and county in which the manufactory is situated?
2. Kind or description of the manufactory; and whether water, steam, or other power?
3. When established, and whether a joint stock concern?
4. Capital invested in ground and buildings, and water power and machinery?
5. Average amount in materials, and in cash for the purchase of materials and payment of wages?
6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?
7. Cause of the increase (or decrease, as the case may be,) of profit?
9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?
10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?
12. Number of men, women, and children employed, and average wages of each class?
13. How many hours a day employed, and what portion of the year?
15. Number of horses, or other animals employed?
16. Whether the manufacturers find a market at the manufactory? if not, how far are they sent to a market?
17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?
18. Where are the manufactures consumed?
20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?
21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate?
25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?

1. Sussex county, State of Delaware.
2. Tannery; horse power.
3. 1819; joint concern.
4. Twelve hundred dollars.
5. Two thousand five hundred dollars.
6. Four per cent.
7. So much manufactured.
9. Six hundred imported hides, amounting to twenty-five hundred dollars, and about four hundred American hides, amounting to eight hundred dollars.
10. Imported hides, net cost, eighteen dollars per hundred weight; American, six dollars per hundred lbs.
12. Four men at one hundred dollars per year.
13. Twelve hours, twelve months.
15. Two.
16. One hundred and fifty miles.
17. No.
18. United States.
20. Bartered for hides in the hair, and sold on four months' credit.
21. Increased at the rate of six per cent. in case of a demand for the manufactured article.
25. Six per cent.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Delaware, Sussex county.                                                   |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Sole leather, and small quantity of per; horse power.                      |
| 3. When established; and whether a joint stock concern.                                                                                                                                                                                                                                              | 3. 1824; individual concern.                                                  |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                                                          | 4. \$1,000.                                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. \$4,000.                                                                   |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. \$500 per annum; can't say further.                                        |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. Profits remain about the same.                                             |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Can't say.                                                                 |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 800 Spanish hides at from 4 to 5 dollars<br>150 uppers at from 2 to 3 "    |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Can't answer.                                                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. 2 men and 1 boy: 13 dolls. a month for men; boy about 6 dolls. per month. |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. From sun to sun all the year.                                             |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. 1 horse.                                                                  |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                | ANSWERS.                                                                                    |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                 | 16. Sent to Philadelphia; 120 miles.                                                        |
| 17. Whether foreign articles of the like kind enter into competition with them at each place of sale; and to what extent?                                                                                                                                                                                                                 | 17. Can't say.                                                                              |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                  | 18. Can't say.                                                                              |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                  | 19. Can't say.                                                                              |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                    | 20. Commonly at 4 months; if bartered for hides, at cash price.                             |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year since the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate?                                                                                | 21. There has been a gradual increase in the raw material, and in the manufactured article. |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                      | 22. Sole from 22 to 28 cts. per lb., upper from \$3 25 to \$4 50.                           |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                | 23. Can't say.                                                                              |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                          | 24. Can't say.                                                                              |
| 25. What has been the rate of your profits, usually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Can't say.                                                                              |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would cause you to abandon your business, or would you manufacture at reduced prices?                                                                                  | 29. Can't say.                                                                              |

WILLIAM TUNNELL.

| QUESTIONS.                                                | ANSWERS.                       |
|-----------------------------------------------------------|--------------------------------|
| 1. State and county in which the manufactory is situated? | 1. Maryland, Worcester county. |

## DOCUMENT 15.—No. 19—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. A furnace, with water power.                                                                                                                                                                                 |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Went into operation in October, 1851 and is a joint concern.                                                                                                                                                 |
| 4. Capital invested in ground and buildings, and water power and in machinery?                                                                                                                                                                                                                       | 4. The sum of \$6,000 was struck by to carry it into operation, but whether it has taken more I cannot tell.                                                                                                    |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Twenty thousand dollars for materials and payment of wages.                                                                                                                                                  |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Cannot answer, as no dividend have been struck.                                                                                                                                                              |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. About 20 horses and mules.                                                                                                                                                                                  |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                            | 16. From 250 to 500 miles.                                                                                                                                                                                      |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                                                            | 17. They do, and very much to the injury of the iron business: not prepared to say precisely how much.                                                                                                          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In the United States.                                                                                                                                                                                       |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. I do not know of any, so where.                                                                                                                                                                             |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                                                               | 20. They are at times glad to make sale most any way they can.                                                                                                                                                  |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                           | 23. I am not able to say what duty: this I leave to the good sense of Congress to take care of their own country.                                                                                               |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                     | 24. Not being acquainted with law, I cannot answer.                                                                                                                                                             |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                        | 27. Say 7,000 bushels grain; 7,000 dollars worth domestic goods.                                                                                                                                                |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices?                                          | 29. I cannot answer the precise duty that ought to be on; but one thing I say, if the manufacture of iron is not encouraged more than what it is, many thousands must be thrown out of business, and be ruined. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                       | 30. If the duty on foreign iron is taken off or reduced, I should have to quit very soon, or have no capital to employ at any thing.                                                                            |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                        | 31. Farming is a poor business to make money, but I think more safe.                                                                                                                                            |

DOCUMENT 15.—No. 19—Continued.

| QUESTIONS.                                                                                                                                                             | ANSWERS.                                                                                           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| 1. Amount of capital; and what proportion the borrowed capital bears to that which is all?                                                                             | 33. I fear the borrowed capital is much the greatest.                                              |
| 1. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent.; how gradual the reduction should be? | 34. I think there are but few that clear six per cent. at the present duties.                      |
| 3. What would be the operation of this change upon the <i>francs</i> at present supposed to be practised?                                                              | 36. I am afraid it would be awful.                                                                 |
| 3. Extent of individual and household manufacture in the United States, and how it has increased since the tariff of 1824?                                             | 38. I cannot answer the above correctly; but I think there has been a great change for the better. |
| 1. Average rate of wages?                                                                                                                                              | 40. For iron works \$ 20 per month.                                                                |

ARTHUR MILBY.

DOCUMENT 15.—No. 20.

*Aaron Marshall, jun.'s Iron Furnaces, (in New Jersey,) Milton, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                      | ANSWERS.                                                                                                                                                                                                                                                                                                                         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                       | 1. In Cumberland and in Weymouth, in New Jersey.                                                                                                                                                                                                                                                                                 |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                            | 2. Two furnaces in manufacturing of iron, with water power: one at Cumberland, and one at Weymouth, in New Jersey.                                                                                                                                                                                                               |
| 3. When established; and whether a joint concern?                                                                                                                                                                                                                                               | 3. About the year 1814.                                                                                                                                                                                                                                                                                                          |
| 4. Average amount in materials, and in the purchase of materials and payment of wages?                                                                                                                                                                                                          | 5. The amount of wages paid by Aaron Marshall, jun., for digging and casting of 2500 tons, and purchasing materials, yearly, as near as can be ascertained, \$5200 dollars, for ore raised and delivered at Milton, for the use of Mr. Samuel Richard, Weymouth furnace, and Edward Smith, at Cumberland furnace, in New Jersey. |
| 5. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of fit upon that portion of the capital which is borrowed, after providing for the interest on it, and the rate of profit upon that portion which is not borrowed? | 6. The profits on the capital stock, as near as could be ascertained, about two thousand dollars.                                                                                                                                                                                                                                |
| 6. Cause of the increase (or decrease, as case may be,) of profit?                                                                                                                                                                                                                              | 7. The cause of decrease, the number of furnaces erected since 1814.                                                                                                                                                                                                                                                             |
| 2. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                 | 12. About 40 men per month, at 15 or 18 dollars.                                                                                                                                                                                                                                                                                 |
| 3. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                 | 13. About 10 hours a day, and from six to ten months.                                                                                                                                                                                                                                                                            |
| 4. Rate of wages of similar classes otherwise employed in the same State and county; in other States; and in foreign countries?                                                                                                                                                                 | 14. Wages from 15 to \$18 per month.                                                                                                                                                                                                                                                                                             |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                                                   |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                          | 15. About 50 horses and 50 yoke of oxen.                                                                                                                                                                                   |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                                                                                                | 16. To New York and Philadelphia.                                                                                                                                                                                          |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                                | 17. Foreign articles are sold at a low price, but are inferior.                                                                                                                                                            |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                 | 18. In the United States.                                                                                                                                                                                                  |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                   | 20. Mostly on a credit or barter for iron or other produce of our own country.                                                                                                                                             |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate?                                                                                | 21. The labor has decreased yearly, and also the price of iron, in which these furnaces is made.                                                                                                                           |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                     | 22. The iron, in the year 1831, was sold for fifty cents per hundred lbs in 1829 and 1830.                                                                                                                                 |
| 25. What has been the rate of your profits annually for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. The rate of profits for the last three years, in carting and hauling, and getting delivered at Milton, 2,500 tons of ore, to be carried to the two furnaces in New Jersey, would be about two thousand dollars yearly. |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                             | 26. The cost of the iron ore in the hole is about 75 cents; cost for labor and carting and other expenses \$2 25 cents per ton, delivered at Milton, and from \$1 75 to \$1 25 freight to the different furnaces.          |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                            | 27. About 2500 bushels of corn, and about 3000 dollars' worth of domestic goods.                                                                                                                                           |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                     | 28. Iron is made at Indian river furnace but cannot say how much.                                                                                                                                                          |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 13½ per ct., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices?                                                                                | 29. If the duty on foreign manufacture of iron were reduced so as to be corresponding reduction on imports, I should be under the necessity of abandoning the business, and employ my stock in agriculture.                |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits, even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                           | 31. In cultivating the land and making grain.                                                                                                                                                                              |
| 40. Average rate of wages?                                                                                                                                                                                                                                                                                                               | 40. Seventeen dollars per month.                                                                                                                                                                                           |

DOCUMENT 15.—No. 21.

*Bar Iron Bloomery Forge, Sussex County, State of Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <p>State and county in which the manufactory is situated?</p> <p>Kind or description of the manufactory; whether water, steam, or other power?</p> <p>When established; and whether a joint concern?</p> <p>Capital invested in ground and build- and water power, and machinery?</p> <p>Cause of the increase (or decrease, as case may be,) of profit?</p>                                                                                                                                                                        | <p>1. Sussex county, State of Delaware.</p> <p>2. Bar iron bloomery forge; water power.</p> <p>3. Individual concern.</p> <p>4. \$3,500.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <p>Amount of articles annually manufac- tured since the establishment of the manu- factory? Description, quality, and value of kind?</p> <p>1. Quantity and value of different kinds of materials used; distinguishing between foreign products and domestic products?</p>                                                                                                                                                                                                                                                          | <p>7. The profits have decreased, owing chiefly to the markets being glutted with foreign iron, and the consequent necessity of holding the article on hand often twelve months for want of sale.</p> <p>9. From twenty-five to forty tons of bar iron, best quality of American hammered iron.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <p>1. Number of men, women, and children employed, and average wages of each class?</p> <p>1. How many hours a day employed, and portion of the year?</p>                                                                                                                                                                                                                                                                                                                                                                           | <p>10. From 25,000 to 40,000 bushels of charcoal, worth, at the manufactory, 4 cents per bushel; also from 100 to 160 tons best rock ore from Bogsworth, at the manufactory, \$4 per ton; also scrap iron, quantity uncertain, worth from 1½ to 2 cents per pound; no foreign products used.</p> <p>12. From 30 to 40 men; average wages about \$15 per month.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>5. Number of horses or other animals employed?</p> <p>5. Whether the manufactures find a market at the manufactory? If not, how far they sent to a market?</p> <p>7. Whether foreign articles of the like enter into competition with them at such a sale, and to what extent?</p>                                                                                                                                                                                                                                               | <p>13. Foremen, colliers, and teamsman from 12 to 15 hours per day, and about 10 months per annum; wood choppers and ore-raisers 12 hours per day, and one-fourth of the year.</p> <p>15. 5 horses: 1 yoke of oxen.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <p>3. Where are the manufactures consumed?</p> <p>9. Whether any of the manufactures are exported to foreign countries? and if so, where?</p> <p>0. Whether the manufacture is sold by manufacturer for cash? if on credit, at what credit? if bartered, for what?</p> <p>1. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year since the establishment of the manufactory; whether the increase has been in the material or the labor, and at what rate?</p> | <p>16. One-third at or near the manufactory; the remainder sent to a market at the distance of 200 miles.</p> <p>17. Foreign articles do enter into competition both at or near the manufactory, and at all other places of sale to almost a ruinous extent, so that we are often compelled to hold the article on hand twelve months or more, subjecting us to expenses and interest that nearly or quite destroy all the profits—all we need is to have the market and ready sales.</p> <p>18. In the United States.</p> <p>19. Not exported.</p> <p>20. Some for cash; chiefly at four and six months.</p> <p>21. Some have increased; others decreased. Laborers' wages have decreased somewhat. We should be very sorry for the wages of the laboring poor to be so decreased as to bring the freeborn sons of America to the level of the half-starved population of Europe.</p> |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. The prices have varied considerably, never so low as at the present.                                                                                                                                           |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. No less than heretofore: the American manufactures can supply the market abundantly, at fair prices, without any foreign iron.                                                                                 |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Allow no drawback on railroad iron.                                                                                                                                                                            |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. The profits have been very small.                                                                                                                                                                              |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. The larger portion consists in the wages of laborers.                                                                                                                                                          |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                              | 27. From 1,200 to 1,500 bushels of grain; from 2,000 to 2,500 pounds of bacon, lard, and lard; and a considerable quantity of domestic cotton goods, tobacco, &c.                                                  |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States; and what amount in your own State?                                                                                                                                                                                                       | 28. I cannot tell.                                                                                                                                                                                                 |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices?                                                                                | 29. I must abandon the business.                                                                                                                                                                                   |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. Don't know how.                                                                                                                                                                                                |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. Yes; many.                                                                                                                                                                                                     |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                                | 32. I know of no iron manufacture affected by foreign competition.                                                                                                                                                 |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                                                                                                                                                                  | 34. To make any reduction is to ruin the American manufacturer. If the American manufacturers can have the entire market they can make iron even lower than they are doing: without the entire market they cannot. |
| 35. If minimums should be abolished, and the duty assessed upon the real value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?                                                                                                                             | 35. I think the present method is the best.                                                                                                                                                                        |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                                                                                                                                                        | 36. I conceive it would have no effect: the smuggler would be a smuggler still.                                                                                                                                    |

## DOCUMENT 15.—No. 21—Continued.

| QUESTIONS.                                                                         | ANSWERS.                                                                                                  |
|------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Proportion which the production by American manufacturers bears to the assumption? | 37. The American manufactories can make all the iron the market needs to give it a full and ample supply. |

SOLOMON PRETTYMAN.

## DOCUMENT 15.—No. 22.

*Iron Ore, Milton, Sussex County, New Jersey.*

| QUESTIONS.                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                          |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| State and county in which the manufactory is situated?<br>Kind or description of the manufactory, whether water, steam, or other power?<br>Average amount in materials, and in for the purchase of materials and payment of wages?<br><br>Cause of the increase (or decrease, as case may be) of profit. | 1. In Cumberland county, State of New Jersey.<br>2. A furnace, with water power.                                                                                  |
| 1. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                         | 5. I furnish from 1500 to 1800 tons of ore for said furnace; the amount of wages paid hands employed in raising and carting the above ore is about 4,700 dollars. |
| 1. How many hours a day employed, and portion of the year?                                                                                                                                                                                                                                               | 7. There has been within a few years a considerable decrease of profit, occasioned, in my opinion, from the competition between the furnaces.                     |
| 1. Rate of wages of similar classes elsewhere; employed in the same State and county; other States; and in foreign countries?                                                                                                                                                                            | 12. I have about 20 hands employed in raising the ore, besides a number to haul it, and pay them \$15 per month.                                                  |
| 1. Number of horses or other animals employed?                                                                                                                                                                                                                                                           | 13. The hands are employed about eight hours a day, and six months in the year.                                                                                   |
| 1. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year since the establishment of the manufactory; whether the increase has been in the material or the labor, and at what rate?                                                    | 14. The rate of similar classes of hands in other employment, is about \$13 per month.                                                                            |
| 1. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                             | 15. There are a number of horses or other animals employed in carting our ore, but from the manner employed, I am unable to say the precise number.               |
| 1. If it would cause you to abandon your business, in what way would you employ capital?                                                                                                                                                                                                                 | 21. Has decreased yearly; and also the price on iron which the furnaces have made.                                                                                |
| 1. Extent of individual and household manufacture in the United States, and how has it increased since the tariff of 1824?                                                                                                                                                                               | 27. I suppose it requires 1500 bushels of corn to carry on the business of raising and carting the ore, and about \$1800 in domestic goods.                       |
| 1. Average rate of wages?                                                                                                                                                                                                                                                                                | 30. I am at present at a loss to say in what way, but in no way that would be so beneficial.                                                                      |
|                                                                                                                                                                                                                                                                                                          | 38. A great change for the better.                                                                                                                                |
|                                                                                                                                                                                                                                                                                                          | 40. Is about \$15 per month for laborers engaged in the aforesaid business.                                                                                       |

ASA HAINES. .

MILTON, DELAWARE, March 6, 1832.

## DOCUMENT 15.—No. 23.

*P. F. Causey's Quercitron Bark Manufactory, &c. Sussex County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                          |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Sussex county, State of Delaware.                                                                              |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Water power mills for manufactory quercitron bark and crushing flax.                                           |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established in the years 1836 and 1838 and individual stock.                                                   |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                                                          | 4. Three thousand dollars.                                                                                        |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Five thousand four hundred dollars.                                                                            |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Not known.                                                                                                     |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Decrease on quercitron bark and by the quantity manufactured.                                                  |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Not known.                                                                                                     |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 250 tons quercitron bark, first quality, 2,100 gallons linseed oil, first quality.                             |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 500 cords black oak bark, value \$5 per cord; 1,500 bushels flax seed, value \$1.50 per bushel; all domestic. |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Not known.                                                                                                    |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. Ten men at 60 cents per day.                                                                                  |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. Twelve hours; twelve months.                                                                                  |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Rate of wages in same county, from ten to eighteen dollars per month.                                         |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                                                            | 16. To the cities of Philadelphia and New York.                                                                   |
| 17. Whether foreign articles of the like kind, enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                           | 17. Bark excepted.                                                                                                |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Quercitron bark mostly in Europe, in the United States.                                                       |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. None.                                                                                                         |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. For cash.                                                                                                     |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                           | 21. Decrease in labor 25 per cent. first past year.                                                               |

| QUESTIONS.                                                                                                                                                                                                                                              | ANSWERS.                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| 1. The prices at which the manufactures have been sold by the manufacturer since establishment?                                                                                                                                                         | 22. Quercitron bark per ton from \$ 36 to \$ 22; oil per gallon from 72 cts. to 100 cents. |
| 2. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                               | 23. On linseed oil 50 per cent.                                                            |
| 3. If the duty upon the foreign manufacture of the kind of goods which you make reduced to 12½ per cent., with a corresponding reduction on all the imports, would you be obliged to abandon your business, or could you manufacture at reduced prices? | 29. It would cause me abandon the manufacture of oil.                                      |
| 4. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                           | 30. I know of nothing better than an office under the present administration.              |
| 5. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duty to 12½ per cent.?                                                                                              | 31. Refer to the above.                                                                    |
| 6. Are not the manufactures of salt and remets from the points of importation, of foreign competition within a certain circle around them, and what is the extent of the circle?                                                                        | 32. I think not.                                                                           |
| 7. Amount of capital; and what proportion the borrowed capital bears to that which is your own?                                                                                                                                                         | 33. None borrowed.                                                                         |
| 8. Average rate of wages?                                                                                                                                                                                                                               | 40. From 15 to 18 dollars per month.                                                       |

As it respects the raising, hauling, and delivering of iron ore to the different furnaces situated in New Jersey, from the county of Sussex, in the State of Delaware, I will refer you to the report of Aaron Marshall, jr., with an additional aggregate of 20 per cent. (excepting of the net profits.)

P. F. CAUSEY.

MILFORD, DELAWARE, March 7, 1832.

## DOCUMENT 15.—No. 24.

## STATISTICAL TABLE OF SUSSEX COUNTY, DELAWARE.

*D. Waples, of Sussex County, Delaware, Iron Master. Manufactory, a blast furnace converting bog ore into castings and pigs: goes by water power. Expenditures paid principally in merchandise; if paid in cash, the business would be a losing concern. A reduction of the duties on iron would cause an abandonment of the business.*

Capital invested in ground and buildings, water power and machinery, \$15,000.  
Average amount in materials, and in cash for purchase of materials and payment of wages, \$300.

Value of pigs and castings annually manufactured, \$25,500.

Value of different kinds of raw materials used, all domestic, \$24,060.

Men employed, 35.

Boys employed, 10.

Wages for nine months, \$6,210.

Wages employed, 30.

Wages employed, 85.

Men employed coaling, ore raising, wood chopping and hauling, 45.

## DOCUMENT 15.—No. 24.—STATISTICAL TABLE—Continued.

*John Prettyman, of Sussex County, Delaware, Iron Master. Manufactory, a bar iron hammer forge: goes by water power.*

Capital invested in ground and buildings, water power and machinery, \$3,500.

Value of materials used, to wit, charcoal and rock ore, \$1,820.

Quantity of bar iron annually manufactured, of best quality, from 25 to 40 tons—say 33—worth \$24,060.

Men employed, 40.

Wages of 40 men per year, at \$15 per month per man, \$7,200.

Number of horses; 5 horses and 1 yoke of oxen.

Bushels of grain, from 12 to 1,500; say 1,350 bushels.

Pounds of meat used, from 2,000 to 2,500; say 2,250 pounds.

*Beds of Iron Ore in Sussex County, Delaware.*

| CONTRACTORS.     | Men employ'd digging, hauling, & delivering 2,500 tons iron ore annually, for use of 2 furnaces in N. Jersey. | Wages, and purchasing materials. | Horses employed. | Yokes of oxen. | Rate of profits for last 3 yrs, in carting, hauling, and delivering at Milton, 2,500 tons ore, to be transported to 2 furnaces in N. Jersey, about \$2,000 yearly. | Grain & domestic productions. |

• Six thousand dollars annually. •

† Machinery only.

## DOCUMENT 15.—No. 25.

*Robert Hilton & Sons' Roan Cassimere Manufactory, New Castle County, Delaware.*

## QUESTIONS.

1. State and county in which the manufactory is situated?

2. Kind or description of the manufactory; and whether water, steam, or other power?

3. When established; and whether a joint stock concern?

4. Capital invested in ground and buildings, and water power, and in machinery?

5. Average amount in materials, and in cash for the purchase of materials and payment of wages?

7. Cause of the increase (or decrease, as the case may be,) of profit?

9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?

10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?

11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?

12. Number of men, women, and children employed, and average wages of each class?

13. How many hours a day employed; and what portion of the year?

15. Number of horses or other animals employed?

16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?

17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?

18. Where are the manufactures consumed?

19. Whether any of the manufactures are exported to foreign countries? and if so, where?

20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?

21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

## ANSWERS.

1. Near Wilmington, New Castle County, Delaware, situate on the Brandywine creek.

2. Cotton yarn; roan cassimeres equal in quality to any imported; water power.

3. A. D. 1825; Robert Hilton & Son.

4. \$20,000; \$45,892; aggregate \$65,892.

5. 150,000 lbs. cotton — \$ 20,625

3,200 lbs. wool — \$ 3,712

\$ 13,152 25 per annum for the wages of workmen.

7. The quantity of the manufactured articles in market is the secondary cause of fluctuation.

9. Roan cassimere 68,200 yards at 40 cts. per yard; 135,000 lbs. cotton yarn, average price 30 cents per lb.

10. See answer to 5th question. No importation of materials to my knowledge.

11. Roan cassimere, 1829, imported from France, sold at 43 cents per yard; domestic ditto. Since 1829, I have no knowledge of any importations.

12. Fifty-two men, women, and children.

13. Twelve hours per day throughout the year.

15. One horse.

16. Philadelphia, Baltimore, New York, and South America.

17. No competition in the preceding specified articles, to my knowledge.

18. Do not know.

19. South America about the value of ten thousand dollars.

20. Six months' credit.

21. Not prepared to answer at present.

22. In 1829 roan cassimeres 43 cts. p. yd.

1830 do 30 do

1831 do 28 do

1832 do 16 do

|---------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Delaware State, New Castle county.                                    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Wool carding; water power.                                            |
| 3. When established; and whether a joint stock concern?                                                                               | 3. Established seven years since; private.                               |
| 4. Capital invested in ground and buildings, and water power and in machinery?                                                        | 4. One thousand dollars.                                                 |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. Fifty dollars; \$ 16 per month.                                       |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. About 1,000 lbs. per annum; value seven cents per pound, common wool. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. 1,000 lbs. per annum; seven cents per pound; domestic.               |
| 12. Number of men, women, and children, employed, and average wages of each class?                                                    | 12. One man.                                                             |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. From sun to sun; four months in the year.                            |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                             | 16. Card for other people.                                               |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | 17. No competition.                                                      |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                   |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. In the State of Delaware, Newcastle county, situated on the Brandywine, in the city of Wilmington.                                                                                                                                                                                                                                      |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Manufactures cotton yarns from No. 8 to 30; the water power is owned by the city, and the water is pumped at night, for the use of the city, by a pump attached to the mill.                                                                                                                                                            |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established by two individuals in 1829, but, owing to the depressed state of the business in that and the next year, they became embarrassed, and their effects were sold by the sheriff to pay their debts, but fell short more than fifty per cent.                                                                                   |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. The mill and property cost the citizens twenty-eight thousand dollars; the machinery now in the mill valued at 10,000 dollars.                                                                                                                                                                                                          |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. We say about six thousand dollars.                                                                                                                                                                                                                                                                                                      |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Those engaged in the establishment in 1829 and '30, must have sustained considerable loss, and no doubt would have been much better off had they been clear of the concern during that time. For the last year the business has met a fair profit, and no doubt much better than it will do for two years to come.                      |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. The cause of the increase in the price and profit was, no doubt, owing to the scarcity of goods in the market, and that scarcity was produced by the goods in the market being lower than could be afforded by those in the business, to manufacture them; the natural consequence was, that the stock should run out, and goods raise. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. We know but little about the business or profits of others in this State or county; but, from observation, presume that no business yields less profit than farmers who depend entirely on slave labor.                                                                                                                                 |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. We manufactured last year about 128,000 lbs. yarn, valued at 30,000 dollars.                                                                                                                                                                                                                                                            |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. About 400 bales of cotton, value \$14,000; 250 gallons oil, valued at \$212; sundries, \$100.                                                                                                                                                                                                                                          |
| 11. Number of men, women, and children, employed, and average wages of each class?                                                                                                                                                                                                                   | 12. We have 9 men, 12 women, and 31 children. The men average about \$7 50 per week; the women \$2; the children from \$1 to \$1 50.                                                                                                                                                                                                       |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. Are employed about 11½ hours per day the year round.                                                                                                                                                                                                                                                                                   |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, other States, and in foreign countries?                                                                                                                                                                        | 14. Girls wages is about 75 cents per week and found, or boarded at house work; at quarrying and dressing stone for railroads, good hands get from 1 dollar to \$1 75 per day.                                                                                                                                                             |

## DOCUMENT 15.—No. 29.—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                                                       |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 15. Number of horses or other animals employed?                                                                                                                                                                                                            | 15. None.                                                                                                                                                                                                                                                                                                                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                  | 16. Our sales are made in Philadelphia, about 28 miles distant: have water communication about ten months in the year.                                                                                                                                                                                                                         |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                 | 17. We can say nothing certainly, but presume they do to a considerable extent.                                                                                                                                                                                                                                                                |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. Principally in this country; some in the East and West Indies. Large quantities of heavy cotton goods are now manufactured and purchased to the South for negro clothing in winter.                                                                                                                                                        |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                 | 20. Part of what we manufacture is sold by us on credit; the balance is sold by an agent, nearly all on credit of 4 and 6 months.                                                                                                                                                                                                              |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                              | 27. There are about 150 barrels flour, valued . . . \$30<br>Fuel . . . . . 30<br>Meat, vegetables, &c. . . . 50<br>\$110                                                                                                                                                                                                                       |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                       | 28. We are not prepared to answer this question.                                                                                                                                                                                                                                                                                               |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices? | 29. We have no doubt it would cause us to give up our business for a few years, and perhaps all others; but we think that we could retain their property a few years, might realize a fortune suddenly by it; but, as soon as our English friends find they have got us fairly on their backs, they would put up the price 50 or 100 per cent. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                             | 30. I think I should not have much capital to dispose of; but I could perhaps be appointed Secretary of the Treasury: that would do very well.                                                                                                                                                                                                 |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent?                                                                                               | 31. I should expect to save more money if I was appointed ambassador to some foreign port, and got the usual fee.                                                                                                                                                                                                                              |

GARRETT &amp; PUSEY.

## DOCUMENT 15.—No. 29.

*Cotton Yarn Manufactory, Newcastle County, State of Delaware.*

| QUESTIONS.                                                                           | ANSWERS.                                                   |
|--------------------------------------------------------------------------------------|------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. On the Brandywine, Newcastle county, State of Delaware. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Water power.                                            |

## DOCUMENT 15.—No. 29—Continued.

## QUESTIONS.

## ANSWERS.

3. When established; and whether a joint stock concern?

4. Capital invested in ground and buildings, and water power and machinery?

5. Average amount in materials, and in cash for the purchase of materials and payment of wages?

6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of the profit upon that portion which is not borrowed?

8. Rates of profit on capital otherwise employed in the same State and county?

9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?

10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?

12. Number of men, women, and children employed, and average wages of each class?

13. How many hours a day employed, and what portion of the year?

15. Number of horses or other animals employed?

16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?

17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?

18. Where are the manufactures consumed?

19. Whether any of the manufactures are exported to foreign countries? and if so, where?

20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?

21. Whether the cost of the manufactured article (to the manufacturer,) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the material or the labor and at what rate?

22. The prices at which the manufactures have been sold by the manufacturer since the establishment?

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

3. We established here about the 1st of September, 1831; there are four in company, viz. James B. Hutchinson, John Waters, Thomas Laird, and Moses Redpath.

4. The ground, water power, and buildings, we rent, (supposed cost) 40 to \$45,000; machinery cost us over \$27,000.

5. Our stock, &c., about \$4,000; wages paid to hands is all cash, about \$800 per week.

6. We have none borrowed; our profits have not exceeded eight per cent.

8. I have not made the inquiry; and, if I should, I fear I should get some short answers.

9. We make about 3,500 lbs. of cotton yarn weekly, fair quality, worth from 24 to 28 cents per pound, (owing to the quality and number.)

10. We use from 3,900 to 4,000 pounds of cotton per week, domestic.

|                              |       |
|------------------------------|-------|
| 12. 15 men, wages, per week, | \$6 4 |
| 20 women, do                 | 2 21  |
| 40 children, do              | 1 47  |

13. 12 hours in the day, and all the year.

15. 2 horses.

16. No market at the factory; we send our yarn to Philadelphia, about 31 miles.

17. There is no yarn imported of the numbers we are making.

18. In the United States.

19. South America.

20. On a credit of from 4 to 6 months generally.

21. We have only had this factory in operation about eight months.

22. Number 15's yarn at 25 cents per lb.

23. The present rate of duty.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. I do not know of any.                                                                                                                                                                                  |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. The honorable Secretary can estimate the profits from what he made while engaged in the business.                                                                                                      |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. The cotton cost 11 cents per lb, was 9 cents, wages 8 cents—is 21 cents. No. 15, yarn is worth 25 cents—leaves 4 cents to pay rent, fuel, light, oil, wear and tear of machinery, &c.                  |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                              | 27. There is 171 persons supported by this factory, who are all supplied by the farmers of the neighborhood.                                                                                               |
| 28. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices?                                                                                | 29. We should abandon our business.                                                                                                                                                                        |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. If we abandon our business, our capital is all in machinery, which would be used nothing, therefore we would have no capital; in that case I should turn politician, and bet to Government for office. |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. If that should take place, I am of opinion that there will be very few pursuits worth following.                                                                                                       |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                               | 33. We have \$37,000 in machinery, and not a dollar borrowed.                                                                                                                                              |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual the reduction should be?                                                                                                                                                                  | 34. The present rate of duty does but very little more; and if there should be a reduction, it would not yield an interest of 6 per cent.                                                                  |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                                                                                                                                                | 37. In coarse cottons, we can scarcely supply all the United States.                                                                                                                                       |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                                                                                                                                           | 38. 50 per cent.                                                                                                                                                                                           |
| 40. Average rate of wages?                                                                                                                                                                                                                                                                                                                 | 40. Average rate per week of all the hands employed in the factory is \$3.                                                                                                                                 |

|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. State of Delaware, Newcastle                                                                  |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Machinery made for manufacturing cotton and wool, &c., by steam power.                        |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established in 1808, by Alrichs & Son; now conducted by Jacob Alrichs & Son.                  |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                                                          | 4. In ground and buildings, \$4,000; machinery, \$4,000.                                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. \$10,000 annually.                                                                            |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. About 8 per cent. on that not borrowed; about 2 per cent. on that borrowed.                   |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Encouragement or depression of cotton and woollen manufactures.                               |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Have no data to ascertain.                                                                    |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value, of each kind?                                                                                                                                                               | 9. About \$12,000 worth; \$10,000 cotton machinery, \$2,000 wool machinery and other articles.   |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. About 30 tons best American iron; about one ton common English iron.                         |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. None imported that we know of, within three or four years.                                   |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. About 20 men, at \$1 25 per day; and 5 boys, at 50 cents per day.                            |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. 10½ hours a day, all the year.                                                               |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. About the same.                                                                              |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. None.                                                                                        |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                                                            | 16. At the establishment.                                                                        |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                            | 17. Not any imported known of, within last three or four years.                                  |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. In the neighborhood of one hundred sixty miles round.                                        |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                            | 19. Others, to the east, have made machinery for South America and Mexico; we have not made any. |
| 20. Whether the manufacture is sold by the manufacturer for cash? and, if on credit, at what credit? if bartered, for what?                                                                                                                                                                          | 20. Cash.                                                                                        |

| QUESTIONS.                                                                                                                                                                                                                            | ANSWERS.                                                                                                    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| Whether the cost of the manufactured (to the manufacturer) has increased or decreased; and how much in each year the establishment of the manufactory; whether the increase has been in the material, or the labor, and at what rate? | 21. Increased in cost, in both labor and material, being made more perfect; price remaining about the same. |

JACOB ALRICHS &amp; SON.

## DOCUMENT 15.—No. 32.

*Manufactory of various kinds of Machinery, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                             | ANSWERS.                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| State and county in which the manufactory situated?                                                                                    | 1. Delaware, Newcastle.                                                                                                               |
| Kind or description of the manufactory; whether water, steam, or other power?                                                          | 2. Cotton and woollen machinery, steam engines, and railroad cars; steam power.                                                       |
| When established, and whether a joint concern?                                                                                         | 3. September, 1828. A company consisting of two persons.                                                                              |
| Capital invested in ground and building?                                                                                               | 4. Six thousand dollars.                                                                                                              |
| Average amount in materials, and in or for the purchase of materials and pay of wages?                                                 | 5. Three thousand five hundred dollars.                                                                                               |
| Cause of the increase, (or decrease, as we may be,) of profit?                                                                         | 7. The American system, as it now exists, is a cause of increase. If abandoned for a system of slavery, it would be a cause of ruin.  |
| Number of men, women, and children employed, and average wages of each?                                                                | 12. 16 men and 5 boys; \$1 12½ for men.                                                                                               |
| How many hours a day employed, and portion of the year?                                                                                | 13. 11 hours all the year.                                                                                                            |
| Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                  | 16. General market within 100 miles, but confined to no particular market.                                                            |
| Whether foreign articles of the like enter into competition with them at place of sale, and to what extent?                            | 17. Existing duties protect us from foreign competition.                                                                              |
| Whether any of the manufactures are exported to foreign countries? and if so, to what?                                                 | 19. Articles of similar manufacture have been exported to South America.                                                              |
| Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what rate? if bartered, for what?                   | 20. For cash when we have confidence in our Government; for credit when this confidence is disturbed by the threats of slave drivers. |
| What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported? | 23. The rate now existing.                                                                                                            |
| Is any change necessary in levying or altering the duty on such articles to prevent fraud?                                             | 24. Patriots for collectors, not office hunters.                                                                                      |

## DOCUMENT 15.—No. 32—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. All the profits have been retained in capital and contingency.            |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices?                                                                                | 29. We would abandon the business.                                            |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. Probably in learning the art of being as a Southern nabob.                |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. We know of nothing, except selling drugs in the swamps of South Carolina. |

McCLARY &amp; EISEL

WILMINGTON, DELAWARE.

## DOCUMENT 15.—No. 33.

*Boot, Shoe, and Trunk Manufactory, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                        |
|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Delaware State, Newcastle county.                                            |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Boots, shoes, and trunks.                                                    |
| 3. When established; and whether a joint stock concern?                                                                               | 3. Established in 1829; private concern.                                        |
| 4. Capital invested in ground and buildings, and water power, and machinery?                                                          | 4. Ground and buildings, 4,500 dollars.                                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. 4,000 dollars.                                                               |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 7. Decrease in consequence of less competition.                                 |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. About 2,000 dollars for boots; 1,500 dollars for shoes; 200 trunks annually. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. 2,000 dollars' worth of raw material principally domestic.                  |

## DOCUMENT 15.—No. 33—Continued.

| QUESTIONS.                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                       | 12. 20 men, 5 women; men \$4 per week, women \$1 50 per week.                                                                                   |
| 2. How many hours a day employed; and portion of the year?                                                                                                                                                                                             | 13. About 12 hours per day the year round.                                                                                                      |
| 3. Whether the manufactures find a market at the manufactory? If not, how far they sent to a market?                                                                                                                                                   | 16. Principally sold at home; some sent to Philadelphia.                                                                                        |
| 4. Whether foreign articles of the like enter into competition with them at place of sale; and to what extent?                                                                                                                                         | 17. No foreign competition.                                                                                                                     |
| 5. Where are the manufactures consumed?                                                                                                                                                                                                                | 18. In the surrounding country.                                                                                                                 |
| 6. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                | 19. None exported.                                                                                                                              |
| 7. Whether the manufacture is sold by manufacturer for cash? and if on credit, what credit? if bartered, for what?                                                                                                                                     | 20. Cash, and credit of four months.                                                                                                            |
| 8. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate?   | 21. Cost has increased the two last years 10 per cent.                                                                                          |
| 9. The prices at which the manufactures are sold by the manufacturer since establishment?                                                                                                                                                              | 22. Leather trunks 3 dollars per foot; hair trunks 87 cents per foot; boots from 3 to 6 dollars per pair; shoes from \$1 50 to \$2 50 per pair. |
| 10. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, what portion of the profits of capital?                                                                               | 26. Raw materials \$2,000; wages \$3,000. Made nothing.                                                                                         |
| 11. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                          | 27. Consume sixty barrels of flour.                                                                                                             |
| 12. If the duty upon the foreign manufacture of the kind of goods which you make be reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, would you manufacture at reduced prices? | 29. A reduction of duty would cause us to abandon our business.                                                                                 |
| 13. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                         | 30. Engage in manufacturing tobacco.                                                                                                            |
| 14. Is there any pursuit in which you could engage, from which you could derive greater gain even after a reduction of the import duty to 12½ per cent.?                                                                                               | 31. Could do better by manufacturing tobacco.                                                                                                   |
| 15. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                           | 33. Amount of capital, \$3,000.                                                                                                                 |

| QUESTIONS.                                                                                                                                                                                                                                                     | ANSWERS.                                                                                                                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                      | 1. Delaware, New Castle county.                                                                                                      |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                           | 2. Boots and shoes; hand.                                                                                                            |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                        | 3. In 1825; private.                                                                                                                 |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                    | 4. Ground and buildings, \$3,000.                                                                                                    |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                | 5. \$2,600 in all.                                                                                                                   |
| 12. Number of men, women, and children employed; and average wages of each class?                                                                                                                                                                              | 12. 10 men, 4 women; average wages of men \$6 per week, women \$1 62 per week.                                                       |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                               | 13. Twelve hours.                                                                                                                    |
| 16. Whether the manufactures find a market at the manufactory? if not, how far are they sent to a market?                                                                                                                                                      | 16. Market at the manufactory.                                                                                                       |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                                      | 17. No foreign competition that I know of.                                                                                           |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                       | 18. In the State of Delaware.                                                                                                        |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                      | 19. None exported.                                                                                                                   |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                         | 20. Principally for cash.                                                                                                            |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                           | 22. Men's boots from 4 to \$5; shoes from \$1 1/4 to \$2 1/4; ladies' boots from \$1 1/2 to \$2 1/2, shoes from 50 cents to \$1 3/4. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12 1/2 per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices? | 29. I should be compelled to abandon my business.                                                                                    |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                 | 30. Cannot say.                                                                                                                      |

*J. S. Hedges, Rope-maker, Wilmington City, Delaware.*

| QUESTIONS.                                                                           | ANSWERS.                                   |
|--------------------------------------------------------------------------------------|--------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Wilmington City, Delaware State.        |
| 2. Kind or description of the manufactory, and whether water, steam, or other power? | 2. Rope and twine manufactory; hand power. |

## DOCUMENT 15.—No. 35.—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                  | 3. In 1830, private.                                                                                         |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                              | 4. \$3,000 in ground, buildings, and machinery.                                                              |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                          | 5. Wages \$250 per an.; cash for the purchase of materials \$1,000; average amount in materials about \$500. |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                   | 7. Decrease of profit, owing to the imposition of articles such as I manufacture.                            |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                          | 10. About 4 tons of American hemp, $\frac{1}{2}$ ton of Russia do., and 5 cwt. of flax.                      |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                        | 12. Three men and two boys; average wages of men \$5 per week, boys \$1 50.                                  |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                         | 13. Twelve hours all the year.                                                                               |
| 15. Number of horses, or other animals employed?                                                                                                                                                                                                                         | 15. Two horses.                                                                                              |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                                | 16. Manufactures find a market at the factory.                                                               |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                                | 17. Foreign articles do enter into competition with such articles as I manufacture.                          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                 | 18. In the United States.                                                                                    |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                 | 19. None exported.                                                                                           |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                                   | 20. About one-third cash, and two-thirds credit of from six to twelve months.                                |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12 $\frac{1}{2}$ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices? | 29. It would cause me to abandon my business.                                                                |

| QUESTIONS.                                                                                                                      | ANSWERS.                                                                                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power and machinery?                                                     | 4. About twelve thousand dollars.                                                                                                                         |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products? | 10. Cocoa 100,000 pounds, nutmeg and 800 bushels, rice ginger 200,000 pounds, black pepper 50,000 pounds, cassia 5,000 pounds, other spices 1,000 pounds. |
| 12. Number of men, women, and children, employed, and average wages of each class?                                              | 12. Three men, two girls, and one girl.                                                                                                                   |
| 13. How many hours a day employed, and what portion of the year?                                                                | 13. Work by the hundred weight.                                                                                                                           |
| 15. Number of horses or other animals employed?                                                                                 | 15. Two horses.                                                                                                                                           |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                       | 16. They do not find a market at the manufactory, but are sent to most of the ports of the United States.                                                 |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?       | 17. Foreign articles do not enter into competition with them.                                                                                             |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                       | 19. Our manufactures are not sent to foreign countries.                                                                                                   |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?          | 20. Generally sold at a credit of 4 months.                                                                                                               |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                | 24. No.                                                                                                                                                   |

C. J. FELL &amp; BROTHERS.

## DOCUMENT 15.—No. 37.

*Coach Manufactory, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                            |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Delaware State, Newcastle county.                                                                |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                  | 2. Coach manufactory; hand.                                                                         |
| 3. When established; and whether a joint stock concern?                                                                               | 3. In 1824; private.                                                                                |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                           | 4. One thousand seven hundred dollars.                                                              |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. Average amount of materials, \$1,000; cash for the purchase of materials, \$1,000; wages, \$600. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Five thousand dollars per annum.                                                                 |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. Three men and three boys; men wages \$6 per week for men, boys \$4 per week.                    |

| QUESTIONS.                                                                                                                                                                                                                                    | ANSWERS.                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------|
| How many hours a day employed; and portion of the year?                                                                                                                                                                                       | 13. Twelve hours.                                                                              |
| Whether the manufactures find a market the manufactory? If not, how far are sent to a market?                                                                                                                                                 | 16. Market at the manufactory.                                                                 |
| Whether foreign articles of the like enter into competition with them at such of sale, and to what extent?                                                                                                                                    | 17. Very little competition.                                                                   |
| Where are the manufactures consumed?                                                                                                                                                                                                          | 18. In the United States.                                                                      |
| Whether any of the manufactures are sent to foreign countries? and, if so, to what extent?                                                                                                                                                    | 19. None.                                                                                      |
| Whether the manufacture is sold by manufacturer for cash? if on credit, at credit? if bartered, for what?                                                                                                                                     | 20. Cash, credit, and barter, but cannot tell to what amount.                                  |
| Whether the cost of the manufactured (to the manufacturer) has increased or decreased; and how much in each year, the establishment of the manufactory; whether the increase has been in the material or the labor, and at what rate?         | 21. Cost decreased in the material, at the rate of 10 per cent. on an average.                 |
| The prices at which the manufactures have been sold by the manufacturer since establishment?                                                                                                                                                  | 22. Close carriages \$500, gigs (average) \$250, dearborns 100 to \$300.                       |
| If the duty upon the foreign manufacture of the kind of goods which you make reduced to 12½ per cent., with a corresponding reduction on all the imports, would you be induced to abandon your business, or to manufacture at reduced prices? | 29. The foreign article imported is so inferior to the American, that there is no competition. |
| Amount of capital; and what proportion the borrowed capital bears to that which is your own?                                                                                                                                                  | 33. One thousand five hundred dollars.                                                         |

*James Watson's Saddlery, &c., New Castle County, Delaware.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                            |
|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Delaware State, New Castle county.                               |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Saddle, harness, and trunk.                                      |
| 3. When established; and whether a joint stock concern?                                                                               | 3. In 1819. Private.                                                |
| 4. Capital invested in ground and buildings?                                                                                          | 4. One thousand six hundred dollars.                                |
| 5. Average amount in materials, in cash for the purchase of materials and payment of wages?                                           | 5. Between \$6,000 and \$7,000 the year.                            |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 7. Decrease of profits owing to an increase of materials.           |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. 750 dozen bridles; 50 saddles, \$1.50 harness; 300 trunks.       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. \$4,000 domestic, and \$1,000 foreign.                          |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. Seven men, three women; men \$15 per month, women \$3 per week. |

| QUESTIONS.                                                                                                                                                                                                                                            | ANSWERS.                                                                                                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| How many hours a day employed, and portion of the year?                                                                                                                                                                                               | 13. Thirteen hours a day.                                                                                                                                                                    |
| Whether the manufactures find a market for the manufacture? If not, how far are sent to a market?                                                                                                                                                     | 16. The principal part sent to Philadelphia, a distance of 30 miles.                                                                                                                         |
| Whether foreign articles of the like enter into competition with them at place of sale; and to what extent?                                                                                                                                           | 17. Very little foreign competition.                                                                                                                                                         |
| Where are the manufactures consumed?                                                                                                                                                                                                                  | 18. In the United States.                                                                                                                                                                    |
| Whether any of the manufactures are sent to foreign countries? and if so, to what?                                                                                                                                                                    | 19. None exported.                                                                                                                                                                           |
| Whether the manufacture is sold by manufacturer for cash? and if on credit, at credit? if bartered, for what?                                                                                                                                         | 20. Cash.                                                                                                                                                                                    |
| Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from establishment of the manufacture; and whether the increase has been in the material or labor, and at what rate?         | 21. The cost of the manufactured article has decreased for the last seven years two per cent. in the labor.                                                                                  |
| The prices at which the manufactures have been sold by the manufacturer since establishment?                                                                                                                                                          | 22. Saddles from five to \$20 each; bridles from 8 to \$20 per dozen; harness, carriage, 20 to \$60 per double set; harness, draft, 8 to \$12 per single set; trunks from 3 50 to \$12 each. |
| What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                | 23. Present duty is sufficient, and nothing less.                                                                                                                                            |
| If the duty upon the foreign manufacture of the kind of goods which you make is reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices? | 29. Should be compelled to abandon my business.                                                                                                                                              |
| If it would cause you to abandon your business, in what way would you employ capital?                                                                                                                                                                 | 30. Give it all to support an administration that would support manufactures.                                                                                                                |
| Amount of capital; and what proportion the borrowed capital bears to that which is paid?                                                                                                                                                              | 33. \$1,000; none borrowed.                                                                                                                                                                  |
| What amount of reduction in the duty would enable the actual or real capital employed to yield an interest of 6 per cent.; how gradual the reduction should be?                                                                                       | 34. A reduction of the present rate of duty would cause annihilation of business.                                                                                                            |

JAMES WATSON.

## DOCUMENT 15,—No. 40.

*Wm. Countess, Saddler, Wilmington, Newcasle County, State of Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                | ANSWERS.                                                                                                                                                                  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                 | 1. Delaware State, and county of Newcastle.                                                                                                                               |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                      | 2. Saddlery and harness; hand power.                                                                                                                                      |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                   | 3. Established in 1837; private concern.                                                                                                                                  |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                               | 4. Ground and buildings \$2,000.                                                                                                                                          |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                           | 5. Average amount in materials about thousand dollars; cash for the purchase of materials about one thousand dollars; journeymen's wages \$500 per annum.                 |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                   | 7. Increase of business owing to accumulation of capital.                                                                                                                 |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                     | 9. Having kept no account, cannot say.                                                                                                                                    |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                           | 10. About \$2,500 worth of raw materials used, of which about \$50 is of foreign manufacture.                                                                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                         | 12. 2 men and 1 woman; men \$7 per week, woman, \$1 50.                                                                                                                   |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                          | 13. Work by the piece, all the year.                                                                                                                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                 | 16. Market at the manufactory.                                                                                                                                            |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                 | 17. No competition from foreign articles; the duty saves me.                                                                                                              |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                  | 18. In the county around.                                                                                                                                                 |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                 | 19. None exported.                                                                                                                                                        |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                | 20. Sales cash.                                                                                                                                                           |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate? | 21. Cost of the manufactured article has decreased in consequence of competition among manufacturers.                                                                     |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                      | 22. Saddles from \$7 to \$17 each, with from 75 cents to \$5; harness, wagon from \$15 to \$25 per set, (one horse,) \$10 or \$12, do., (for 1 horse,) from \$12 to \$14. |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                | 23. Duty, as far as I know, is sufficient.                                                                                                                                |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted                                   | 25. Having kept no particular account, cannot say.                                                                                                                        |

| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. In the country around.                                                                                                                             |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                    | 19. None exported.                                                                                                                                     |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. Cash.                                                                                                                                              |
| 21. Whether the cost of the manufactured article (to the manufacturer,) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the material or the labor; and at what rate? | 21. Cost increased twelve per cent in the material.                                                                                                    |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                        | 22. Saddles from 9 to \$18; trunks \$1 per foot; carriage harness from 15 to \$20 a set (one horse); draught harness from 6 to \$20 a set (two horse.) |

## DOCUMENT 15.—No. 42.

*John Perkins, Saddler, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                            |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Delaware, Newcastle county.                                                                                             |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Saddles, harness, and bridle; by hand.                                                                                           |
| 3. When established; and whether a joint stock concern?                                                                               | 3. In 1831; private.                                                                                                                |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                           | 4. None.                                                                                                                            |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                               | 7. The reduced price of hardware; increase, the high price paid for leather.                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Saddles from 80 to 100, price from \$10 to \$16; sets of harness from 50 to 60, price \$5 a \$30.                                |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. Hands, 5; from \$8 to \$15 per month.                                                                                           |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. From the 10th March till 10th October, from sunrise till setting; from 10th October till 10th March, from sunrise till 11 A. M. |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to market?                               | 16. Ready sale for articles at home.                                                                                                |
| 18. Where are the manufactures consumed?                                                                                              | 18. At home.                                                                                                                        |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                              | ANSWERS.                                                                              |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                | 19. No exports.                                                                       |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                              | 20. Some disposed of in each way; barter for the products of the surrounding country. |
| 25. What has been the rate of your profits, annually, for the last three years? and if be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Rate of profits from 12½ to 25 per cent.                                          |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would cause you to abandon your business, or could you manufacture at reduced prices?                                                                                | 29. By necessity, at reduced prices.                                                  |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                           | 31. Equivocal.                                                                        |
| 33. Amount of capital, and what proportion the borrowed capital bears to that which real?                                                                                                                                                                                                                                               | 33. Capital, supposition, \$400; borrowed none.                                       |
| 40. Average rate of wages?                                                                                                                                                                                                                                                                                                              | 40. From \$8 to \$15 per month.                                                       |

JOHN PERKINS.

## Tabular Statement, including Papermaker, Machine

| Names of manufacturers and mechanics, and date of establishment.      | Capital invested in ground, buildings, water power, and machinery. | Average amount in materials, cash for the purchase of materials and payment of wages. | Amount of articles annually manufactured. | Kinds.                                                                              | Quantity of materials per annum.                                                                                                            |
|-----------------------------------------------------------------------|--------------------------------------------------------------------|---------------------------------------------------------------------------------------|-------------------------------------------|-------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Jacob Alrich and Son, machinists; 1808.                               | \$7,500                                                            | \$10,000                                                                              | \$12,000                                  | Cotton machinery, wool do. and other articles.                                      | 30 tons best American iron; 1 ton cast English iron.                                                                                        |
| McClary & Bush, makers of various kinds of machinery; 1838.           | 6,000                                                              | 3,500                                                                                 | -                                         | Cotton and wool-len machinery, steam engines and railroad cars; steam power.        | -                                                                                                                                           |
| William Magens, boot, shoe, and trunk maker; 1829; private concern.   | 4,500                                                              | 4,000                                                                                 | 14,600                                    | Boots, shoes, and trunks.                                                           | Principally domestic, worth \$200.                                                                                                          |
| James L. Devon, boot and shoemaker; 1825; private concern.            | 3,000                                                              | 2,600                                                                                 | -                                         | Boots and shoes                                                                     | -                                                                                                                                           |
| J. S. Hatting.                                                                     |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                     | 3. 1925; individual.                                                            |
| 4. Capital invested in ground and buildings, and water power, and machinery?                                                                                                                                                                                | 4. \$7,000.                                                                     |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                             | 5. About \$3,000.                                                               |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                      | 7. Fluctuation in the price of hats and trimmings.                              |
| 8. Rates of profit on capital otherwise employed 'in the same State and county?                                                                                                                                                                             | 8. 10 per cent.                                                                 |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                       | 9. \$1,200.                                                                     |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                             | 10. \$1,000 domestic; \$2,000 foreign.                                          |
| 12. Number of men, women, and children employed; and average wages of each class?                                                                                                                                                                           | 12. 4 men; 1 woman.                                                             |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                            | 13. 10 hours.                                                                   |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                   | 16. At the manufactory.                                                         |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                  | 17. No foreign competition on account of a judicious protection by our country. |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. In Pennsylvania, Jersey, Maryland and Delaware.                             |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                   | 19. None.                                                                       |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. Cash, and 6 months.                                                         |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                        | 22. From \$2 to \$10.                                                           |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                  | 23. The present rate.                                                           |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                            | 24. None.                                                                       |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices? | 29. I would abandon the business the day after the fatal reduction.             |

| QUESTIONS.                                                                                                                                                                                                                                                        | ANSWERS.                                                                                                                                                                                                                                                                                                         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>. If it would cause you to abandon your business, in what way would you employ capital?</p> <p>. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?</p> | <p>30. In travelling out of the country, that I might not witness her sad reverse.</p> <p>31. I am unacquainted with any other business, consequently cannot tell; but I feel assured that, in one year after the proposed reduction, there would not be a hat manufactory in the Atlantic or middle States.</p> |

W. R. SELLARS.

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                 | 20. Cash principally.                                                                                                                  |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year, from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate? | 21. Increase on the material, $\frac{1}{2}$ per cent.; labor, no increase.                                                             |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. Beaver hats \$9; castor best \$11.50 do. from 7 to \$5; racams from \$4 to \$11. men's and youths' more inferior, from \$1 to \$3. |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                 | 23. Duty sufficient existing.                                                                                                          |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                           | 24. In my opinion none.                                                                                                                |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                              | 27. Do not know.                                                                                                                       |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent. with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices? | 29. If the duties were reduced to 12½ per cent. as stated, it would be ruinous to our business.                                        |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                             | 30. I know of no other business at which I could employ my small capital in a way that would give support to my family.                |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                              | 31. I know of none now.                                                                                                                |

WILMINGTON, DELAWARE.

PETER SPRINGER, Hatter.

## DOCUMENT 15.—No. 46.

*Lewis Rumford, Hatter, New Castle County, Delaware.*

| QUESTIONS.                                                                           | ANSWERS.                              |
|--------------------------------------------------------------------------------------|---------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Delaware State, New Castle county. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Hatting; hand power.               |
| 3. When established, and whether a joint stock concern?                              | 3. In 1820. Private.                  |
| 4. Capital invested in ground and buildings, and water power and machinery?          | 4. \$3,300 ground and buildings.      |

| QUESTIONS.                                                                                                                                                                                                                                                                  | ANSWERS.                                                              |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| verage amount in materials, and in cash purchase of materials and payment of                                                                                                                                                                                                | 5. About \$3,000 the whole.                                           |
| nnual rate of profit on the capital in-<br>since the establishment of the manu-<br>; distinguishing between the rate of<br>upon that portion of the capital which<br>owed, after providing for the interest<br>; and the rate of profit upon that<br>which is not borrowed? | 6. As much as we can; but that is little<br>enough in all conscience. |
| Amount of articles annually manufac-<br>since the establishment of the manufac-<br>Description, quality, and value of each                                                                                                                                                  | 9. 1,200 annually.                                                    |
| Quantity and value of different kinds<br>r materials used; distinguishing be-<br>foreign products and domestic pro-                                                                                                                                                         | 10. Foreign \$ 600; domestic \$ 1,400.                                |
| Number of men, women and children<br>yed, and average wages of each class?                                                                                                                                                                                                  | 12. Four men; one woman.                                              |
| How many hours a day employed, and<br>portion of the year?                                                                                                                                                                                                                  | 13. Ten hours a day all the year.                                     |
| Whether the manufactures find a mar-<br>the manufactory? If not, how far are<br>sent to a market?                                                                                                                                                                           | 16. Market at the manufactory.                                        |
| Whether foreign articles of the like<br>enter into competition with them at<br>place of sale, and to what extent?                                                                                                                                                           | 17. No foreign competition.                                           |
| Where are the manufactures consumed?                                                                                                                                                                                                                                        | 18. In the country around.                                            |
| Whether any of the manufactures are<br>red to foreign countries? and if so,<br>e?                                                                                                                                                                                           | 19. None.                                                             |
| Whether the manufacture is sold by<br>manufactory for cash? and if on credit,<br>at credit? if bartered, for what?                                                                                                                                                          | 20. Cash and a credit of six months.                                  |
| If the duty upon the foreign manufac-<br>of the kind of goods which you make<br>reduced to 12½ per cent., with a corres-<br>ding reduction on all the imports, would<br>se you to abandon your business, or<br>d you manufacture at reduced prices?                         | 29. It would cause me to abandon my bu-<br>siness.                    |

| QUESTIONS.                                                                       | ANSWERS.                                |
|----------------------------------------------------------------------------------|-----------------------------------------|
| State and county in which the manufac-<br>is situated?                           | 1. State of Delaware, Newcastle county. |
| Kind or description of the manufactory;<br>whether water, steam, or other power? | 2. Soap and candles; hand power.        |

## DOCUMENT 15.—No. 47.—Continued.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| 3. When established; and whether a joint stock concern?                                                                               | 3. In 1826; private concern.                                              |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                           | 4. 4,000 dollars, ground, building, and machinery.                        |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. \$13,000.                                                              |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. About 100,000 lbs. soap; 100,000 lb. candles.                          |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. Domestic.                                                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. Six men; average wages \$3 <sup>40</sup> / <sub>100</sub> per month.  |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. 12 hours a day, all the year.                                         |
| 15. Number of horses or other animals employed?                                                                                       | 15. Six horses.                                                           |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                             | 16. A part at home, and a part exceeding 60 miles.                        |
| 18. Where are the manufactures consumed?                                                                                              | 18. Delaware, Pennsylvania, and Maryland.                                 |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                             | 19. None.                                                                 |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 22. Soap, from 4½ to 8 cents per lb.; candles, from 8 to 12 cents per lb. |

| QUESTIONS.                                                                                                                     | ANSWERS.                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of kind?  | 9. About 100,000 lbs. candles, average 10 cents per lb.; 150,000 lbs. soap, average 7 cents per lb. |
| 1. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products? | 10. 150,000 lbs. rough fat, 80,000 lbs. tallow; \$1,200 barilla.                                    |
| 2. Number of men, women, and children employed, and average wages of each class?                                               | 12. 5 men, average wages \$4 65 per week.                                                           |
| 3. How many hours a day employed, and what portion of the year?                                                                | 13. 12 hours.                                                                                       |
| 4. Number of horses or other animals employed?                                                                                 | 15. 6 horses.                                                                                       |
| 5. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                       | 16. Market in the States of Delaware and Maryland.                                                  |
| 6. Whether foreign articles of the like kind enter into competition with them at such a price of sale; and to what extent?     | 17. No foreign competition.                                                                         |
| 7. Where are the manufactures consumed?                                                                                        | 18. In the United States.                                                                           |
| 8. Whether any of the manufactures are exported to foreign countries? and if so, where?                                        | 19. None.                                                                                           |
| 9. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?      | 20. One-half cash, and one-half credit.                                                             |
| 10. The prices at which the manufactures have been sold by the manufacturer since the establishment?                           | 22. Soap 7 cents per lb. the average; candles 10 cents.                                             |

BAINTON &amp; BANCROFT.

## DOCUMENT 15.—No. 49.

*Iron Foundry, Wilmington, Newcastle County, Delaware.*

| QUESTIONS.                                                                                      | ANSWERS.                                                                                                                          |
|-------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. Wilmington, Newcastle county, Delaware; Mahlon Betts proprietor.                                                               |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?            | 2. Iron foundry; use a steam engine of three horse power.                                                                         |
| 3. When established, and whether a joint stock concern?                                         | 3. A private concern; has been in the hands of the present proprietor since 1822; originally established about 1812 or '13.       |
| 4. Capital invested in ground and buildings, steam power, and machinery?                        | 4. 7,850 dollars.                                                                                                                 |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 5. 8,000 dollars.                                                                                                                 |
| 6. Cause of the increase (or decrease, as the case may be,) of profit?                          | 7. A considerable increase, occasioned by the general prosperity of the manufacturing establishments located in the neighborhood. |

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                            | 10. Consume about 10,000 bushels coal at 20 cts. per bushel, and 250 tons of iron; about one-third of the latter imported from England; average price about \$35 per ton. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                          | 12. 18 men employed.                                                                                                                                                      |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                           | 13. 10 hours per day.                                                                                                                                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                  | 16. Work made to order.                                                                                                                                                   |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                  | 17. Very little competition, except in road work.                                                                                                                         |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. In the neighborhood.                                                                                                                                                  |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                 | 20. Nearly all sold at a credit of from to twelve months.                                                                                                                 |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate? | 21. The cost of making has been reduced by a fall in the price of materials used, and experience in the operations.                                                       |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. The price of small castings has fallen from 9 to five cents per lb., and larger ones from 6 to 4¢.                                                                    |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                 | 23. No similar articles imported.                                                                                                                                         |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                             | 30. Live on until it disappears, then get an office in the Government. I can't farm.                                                                                      |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                | 32. Railroads and canals will soon reach the most remote point in our country at which these articles are wanted.                                                         |

MAHLON BETTS.

| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                     | 3. January, 1831.                                                                                                                                                                                                                                                                                                                                                           |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                 | 4. Eight thousand dollars.                                                                                                                                                                                                                                                                                                                                                  |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                       | 9. About twenty thousand dollars iron castings; average price about five cents per pound.                                                                                                                                                                                                                                                                                   |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                             | 10. One hundred and seventy-five tons American pig iron, worth from thirty-five to forty dollars per ton; from twenty to forty tons Scotch pig, worth from forty-three to forty-eight dollars per ton; about fifty tons old castings, worth from fifteen to twenty-two dollars per ton: two hundred tons Lehigh coal, worth about six dollars and sixty-five cents per ton. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                           | 12. Fifteen men and boys; wages, average of all, about six dollars per week each.                                                                                                                                                                                                                                                                                           |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                            | 13. Employment all the year; work about ten hours per day.                                                                                                                                                                                                                                                                                                                  |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                   | 16. Principally at the manufactory; some sent to Philadelphia, a distance of thirty miles.                                                                                                                                                                                                                                                                                  |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                   | 17. No foreign competition.                                                                                                                                                                                                                                                                                                                                                 |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. In the United States.                                                                                                                                                                                                                                                                                                                                                   |
| 20. Whether the manufactory is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                      | 20. Usual terms six months.                                                                                                                                                                                                                                                                                                                                                 |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices? | 29. If the duty was reduced to 12½ per cent., it would cause us to abandon our business.                                                                                                                                                                                                                                                                                    |
| 35. Amount of capital?                                                                                                                                                                                                                                      | 33. Seven thousand dollars.                                                                                                                                                                                                                                                                                                                                                 |

WILMINGTON, Delaware.

JONATHAN BONNEY &amp; Co.

## DOCUMENT 15.—No. 51.

*Manufactory of Tin and Sheet Iron Ware, Newcastle County, Delaware.*

| QUESTIONS.                                                                           | ANSWERS.                                |
|--------------------------------------------------------------------------------------|-----------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Delaware State, Newcastle county.    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Tin and sheet iron ware; hand power. |

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                                                                                                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                     | 3. In 1813; private concern.                                                                                                                                                                                            |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                 | 4. Six thousand five hundred dollars in ground and buildings.                                                                                                                                                           |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                             | 5. From four to five thousand dollars whole.                                                                                                                                                                            |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                     | 7. Profit decreased, owing to home competition.                                                                                                                                                                         |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                             | 10. About two thousand dollars foreign, and one thousand dollars domestic.                                                                                                                                              |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                            | 12. Three men and two boys; men \$1 per week, boys worth \$2 per week.                                                                                                                                                  |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                            | 13. Eleven hours a day, all the year.                                                                                                                                                                                   |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                   | 16. Market at the manufactory.                                                                                                                                                                                          |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                  | 17. No foreign competition.                                                                                                                                                                                             |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. In the country around.                                                                                                                                                                                              |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                    | 19. None exported.                                                                                                                                                                                                      |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                      | 20. Credit of one year generally.                                                                                                                                                                                       |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices? | 29. Compelled to abandon my business.                                                                                                                                                                                   |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                              | 30. The foregoing being the business which I principally subsist, I know of no other that I could advantageously employ my capital in, should I be so fortunate as to save my thing from the ruins of my establishment. |

THOS. C. ALRICH.

## DOCUMENT 15.—No. 52.

*Manufactory of Tin and Sheet Iron Ware, Newcastle County, Delaware.*

| QUESTIONS.                                                                           | ANSWERS.                             |
|--------------------------------------------------------------------------------------|--------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Delaware State, Newcastle county. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Tin and sheet iron ware; hand.    |

| QUESTIONS.                                                                                                                                                                                                                                                     | ANSWERS.                                                                                                                            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| 1. When established; and whether a joint concern?                                                                                                                                                                                                              | 3. In 1820; private.                                                                                                                |
| 2. Capital invested in ground and buildings; and water power and machinery?                                                                                                                                                                                    | 4. Four thousand five hundred dollars, ground and buildings.                                                                        |
| 3. Average amount in materials, and in labor for the purchase of materials and payment of wages?                                                                                                                                                               | 5. One thousand dollars in materials, cash for the purchase of materials two hundred dollars, wages nine hundred dollars per annum. |
| 4. Amount of articles annually manufactured since the establishment of the manufactory—Description, quality, and value of each?                                                                                                                                | 9. From three to four thousand dollars per annum.                                                                                   |
| 5. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                 | 10. Sheet iron \$500 per annum, tin \$1,540 per annum.                                                                              |
| 6. Number of men, women, and children employed, and average wages of each?                                                                                                                                                                                     | 12. Three men, wages \$6 per week.                                                                                                  |
| 7. How many hours a day employed; and at what portion of the year?                                                                                                                                                                                             | 13. Ten hours.                                                                                                                      |
| 8. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                       | 16. Find a market in Delaware, Pennsylvania, and Maryland.                                                                          |
| 9. Whether foreign articles of the like kind enter into competition with them at the place of sale; and to what extent?                                                                                                                                        | 17. None that I know of.                                                                                                            |
| 10. Where are the manufactures consumed?                                                                                                                                                                                                                       | 18. In the United States.                                                                                                           |
| 11. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                       | 19. None.                                                                                                                           |
| 12. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what price? if bartered, for what?                                                                                                                                          | 20. Principally bartered for feathers, wool, quills, &c.                                                                            |
| 13. If the duty upon the foreign manufactures of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would you be induced to abandon your business, or would you manufacture at reduced prices? | 29. Could afford to manufacture at reduced prices.                                                                                  |

NATH. BECKLEY.

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                             |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                     | 3. In 1792; private.                                                                                                 |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                             | 4. Ground and buildings \$3,000.                                                                                     |
| 5. Average amount in materials, and in cash for the purchase of materials, and payment of wages?                                                                                                                                                            | 5. Average amount in materials, and cash for the purchase of materials, \$800.                                       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                             | 10. 100 lbs. of copper, at 25 cents<br>50 boxes tin, at 9 to \$10 per box.<br>1,200 cwt. sheet iron, at \$8 per cwt. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                           | 12. Do the work within ourselves; 3 persons.                                                                         |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                   | 16. Principally at the manufactory.                                                                                  |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?                                                                                                                                   | 17. No foreign competition.                                                                                          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. In the United States.                                                                                            |
| 19. Whether any of the manufactures are exported to foreign countries? And if so, where?                                                                                                                                                                    | 19. None.                                                                                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                      | 20. Principally for cash.                                                                                            |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices? | 29. If the duty was reduced, we should be compelled to abandon our business.                                         |

SAM'L WOOD.

## DOCUMENT 15.—No. 54.

*D. C. Wilson's Brick Manufactory, Newcastle County, State of Delaware.*

| QUESTIONS.                                                                                      | ANSWERS.                                                              |
|-------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. Delaware State, Newcastle county.                                  |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?            | 2. Brickmaking; hand.                                                 |
| 3. When established; and whether a joint stock concern?                                         | 3. In 1827; private.                                                  |
| 4. Capital invested in ground and buildings, and water power and machinery?                     | 4. Ground and buildings \$6,000.                                      |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 5. Payment of wages about \$4,000 per annum; wood, \$2,500 per annum. |

## DOCUMENT 15.—No. 54.—Continued.

| QUESTIONS.                                                                                                                    | ANSWERS.                                                                                            |
|-------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of kind? | 9. 1,300,000 bricks per annum; run of the kiln \$6 per thousand.                                    |
| 1. Number of men, women, and children employed, and average wages of each?                                                    | 12. 20 men and 10 boys; average for men \$30 per month; boys \$12 per month.                        |
| 2. How many hours a day employed; and portion of the year?                                                                    | 13. Work by the piece.                                                                              |
| 3. Number of horses or other animals employed?                                                                                | 15. 5 horses.                                                                                       |
| 4. Whether the manufactures find a market at the manufactory? If not, how far are sent to a market?                           | 16. $\frac{1}{2}$ at the manufactory; $\frac{1}{2}$ at Philadelphia, and $\frac{1}{2}$ in New York. |
| 5. Where are the manufactures consumed?                                                                                       | 18. In the United States.                                                                           |
| 6. Whether any of the manufactures are exported to foreign countries? and if so, where?                                       | 19. None.                                                                                           |
| 7. Whether the manufacture is sold by manufacturer for cash? and if on credit, what credit? if bartered, for what?            | 20. Credit of 6 months.                                                                             |
| 8. The prices at which the manufactures have been sold by the manufacturer since establishment?                               | 22. Average \$6 per thousand.                                                                       |
| 9. Amount of capital?                                                                                                         | 23. \$7,000.                                                                                        |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Delaware State, New Castle county.                                                    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Lime.                                                                                 |
| 3. When established; and whether a joint stock concern?                                                                               | 3. In 1816. Private.                                                                     |
| 4. Capital invested in ground and buildings, and water power, and machinery?                                                          | 4. Fifty thousand dollars.                                                               |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. \$ 5,000; about 4 or 5,000 dollars; about \$ 4,000 per annum; aggregate \$14,000.     |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. 50,000 bushels of lime annually.                                                      |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. Quarried 50,000 bushels of stone.                                                    |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. From 25 to 30 men.                                                                   |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. From sun to sun.                                                                     |
| 15. Number of horses or other animals employed?                                                                                       | 15. 21 horses, and seven or eight yoke of oxen.                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                             | 16. Market in the surrounding country.                                                   |
| 18. Where are the manufactures consumed?                                                                                              | 18. In the surrounding country.                                                          |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 19. None.                                                                                |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 20. Cash.                                                                                |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 22. Previous to 1822, sold at 30 cents per bushel; after which time it fell to 20 cents. |

ABEL JEANES.

## DOCUMENT 15.—No. 57.

*Lime Manufactory, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                               | ANSWERS.                                                                                             |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                | 1. Delaware State, Newcastle county.                                                                 |
| 2. Kind or description of the manufactory; whether water, steam, or other power?                                                                                                                                                                         | 2. Lime.                                                                                             |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                  | 3. In 1816; private.                                                                                 |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                              | 4. Ground and buildings, \$20,000.                                                                   |
| 5. Average amount in materials, and in wages for the purchase of materials and payment of wages?                                                                                                                                                         | 5. Materials, 450 dollars; for the purchase of materials, \$220 annually; payment of wages, \$1,200. |
| 6. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                    | 9. 35,000 bushels of white lime at 20 cts. per bushel; 10,000 bushels of stone at 6 cts. per bushel. |
| 7. Quantity and value of different kinds of materials used; distinguishing between foreign products and domestic products?                                                                                                                               | 10. 45,000 bushels stone per annum.                                                                  |
| 8. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                         | 12. 14 men, average \$18 per month.                                                                  |
| 9. How many hours a day employed, and what portion of the year?                                                                                                                                                                                          | 13. From sun to sun the whole year.                                                                  |
| 10. Number of horses or other animals employed?                                                                                                                                                                                                          | 15. 17 horses and 3 yoke of oxen.                                                                    |
| 11. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                | 16. Sell one-half at the kiln, and the other half sold within 15 miles.                              |
| 12. Where are the manufactures consumed?                                                                                                                                                                                                                 | 18. In the country around.                                                                           |
| 13. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                | 19. None.                                                                                            |
| 14. Whether the manufacture is sold by the manufacturer for cash? and if on credit, what credit? if bartered, for what?                                                                                                                                  | 20. Cash.                                                                                            |
| 15. Whether the cost of the manufactured article (to the manufacturer) has increased, decreased; and how much in each year since the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate? | 21. Decreased in labor and material.                                                                 |
| 16. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                     | 22. Average 20 cents per bushel.                                                                     |
| 17. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                            | 27. 52 barrels of flour.                                                                             |

JOSEPH EASTBURN.

*Tabular Statement for Hatters, Bootmakers, and other Manufac-*

| Date of establishment, &c.          | Names of manufacturers and mechanics.                         | Capital invested in ground, buildings, water power, and machinery. | Average amt in materials, cash for purchase of materials and payment of wages. | Amount of articles annually manufactured. | Kinds.                                                                                                         |

*Benjamin Webb's Bark Mill, State of Delaware, Newcastle County.*

| QUESTIONS.                                                                           | ANSWERS.                              |
|--------------------------------------------------------------------------------------|---------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Delaware State, New Castle county. |
| 2. Kind or description of the manufactory, and whether water, steam, or other power? | 2. Bark mill, water power.            |

| QUESTIONS.                                                                                                                                                                                                                                                | ANSWERS.                                                                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                   | 3. In 1827, private concern.                                                                         |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                               | 4. Four thousand dollars.                                                                            |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                           | 5. About \$1,500 for the whole.                                                                      |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                    | 7. Decrease; apparent cause, home competition.                                                       |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                     | 9. About 300 tons of bark per annum; is one kind, first quality quercitron; soap value \$32 per ton. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                           | 10. About 600 cords of bark, at \$1                                                                  |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                          | 12. Seven men at \$4 50 per week.                                                                    |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                          | 13. Eight hours all the year.                                                                        |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                           | 15. One horse.                                                                                       |
| 16. Whether the manufactures finds a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                | 16. Philadelphia and New York.                                                                       |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                 | 17. No foreign competition.                                                                          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                  | 18. In England, France, and Germany.                                                                 |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                  | 19. As above.                                                                                        |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                | 20. Always for cash.                                                                                 |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate? | 21. Decreased 50 per cent. in the manufactured article.                                              |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                      | 22. Answered in the 9th question.                                                                    |

BENJAMIN WEBB.

## DOCUMENT 15.—No. 62.

*Tanning of Leather, Newcastle County, State of Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                | ANSWERS.                                                                  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                 | 1. Delaware State, Newcastle county.                                      |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                      | 2. Tanning of leather; hand power.                                        |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                   | 3. In 1828; private.                                                      |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                               | 4. \$3,500.                                                               |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                           | 5. \$5,350 the whole.                                                     |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                           | 10. 1,000 hides, 125 cords of bark, domestic.                             |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                         | 12. 1 man, 2 boys; man's wages \$17 per month, boys \$1 50 each per week. |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                          | 13. 12 hours.                                                             |
| 15. Number of horses, or other animals employed?                                                                                                                                                                                                          | 15. 1 horse.                                                              |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                 | 16. $\frac{2}{3}$ at the manufactory, and $\frac{1}{3}$ in Philadelphia.  |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                  | 18. In the United States.                                                 |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                  | 19. None.                                                                 |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                | 20. Generally at 90 days.                                                 |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate? | 21. Cost increased six per cent. in the material.                         |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                      | 22. Sold in 1829, at 23 cts. per lb.<br>1830, 24    "<br>1831, 26    "    |

JAMES CARSON.

## DOCUMENT 15.—No. 63.

*Tannery, Wilmington, Newcastle County, Delaware.*

| QUESTIONS.                                                                           | ANSWERS.                                            |
|--------------------------------------------------------------------------------------|-----------------------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Wilmington, Newcastle county, State of Delaware. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. A small tannery; horse power.                    |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Soon after the first settlement of the town, about ninety years ago; have no part in business.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 4. Capital invested in ground and buildings, water power, and machinery?                                                                                                                                                                                                                             | 4. Perhaps three or four thousand dollars.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. To this and the next query I cannot give precise answers. Not having any joint concern, nor any borrowed capital, I have not been under the necessity of keeping any account of purchases or sales; have no balance sheet, nor any means to ascertain profits or loss, but by experience. I may, however, add, that I am not sensible of having increased my property any thing within ten or twenty years. The amount of wages paid in the tannery may be four hundred and fifty or five hundred dollars per annum.                                                                                                                                                                                                                                                                                             |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory, distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 7. As above, I cannot say any thing about profit, of late times, as it respects myself; but many tanners in this State have failed, and others have abandoned the business. The deficiency of profit arises from the low price of leather, and the increased cost, especially of bark, and this has principally arisen from the competition the numerous establishments occasion, which has, as it always must have, the effect of reducing the profit to the lowest supportable degree. In every manufacture, of which a knowledge and privilege are open to society, and the necessary materials plenty and accessible, the profit will be reduced, even though the price of the product should rise in consequence of the advanced price of materials; in which case the community at large receive the advance. |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 8. I cannot tell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 9. I have never, in any one year, sold as much manufactured goods as I had capital employed, which may have varied from five thousand to ten thousand dollars; but what part of it has been employed in tanning, I cannot tell. Of late, it is probable my sales do not exceed 2,500 dollars per annum, and the expenditure about or nearly as much; product, principally sole leather. I have some land in the vicinity of the city, the expenses and product of which are so intimately connected with my tanning business, that I cannot be particular.                                                                                                                                                                                                                                                          |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 10. Principally domestic products. For the rest, see above. I may add that probably one-tenth part of the purchases may be of foreign hides.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 11. I believe that there is very little leather of the kind we make, imported. Do not know any thing respecting the price of such leather as is imported at present.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                          | 12. Commonly two or three men employed; occasionally more. As it respects wages, answered elsewhere.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                           | 13. The working hours are from sunrise until sunset. Don't work at night. I keep my men all the year generally.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                           | 14. I cannot tell with respect to foreign countries, other than it is understood that, by dint of oppression, and the extreme penury of the working class, employers are enabled to sell goods very low. The wages of laborers here is not materially different from those of our journeymen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                            | 15. Sometimes two; one is sufficient for the tannery.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                  | 16. I sell commonly either at home or in Philadelphia.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 17. Whether foreign articles of the like kind enter into competition with them at such place of sale; and to what extent?                                                                                                                                  | 17. Answered at the 11th query.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. Principally in the United States; some, especially light leather, is sent to the West Indies and South America, and, perhaps, to Mexico.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                  | 19. Answered above.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? it bartered, for what?                                                                                                                                 | 20. When cash can be obtained, it is preferred; but most commonly quantities sell at 3, 4, or 6 months' credit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. In this neighborhood the cost to the manufacturer has greatly increased in my time; the increase has been both in the material and labor; slaughter hides 25 per cent.; Spanish 50 per cent.; bark 300 per cent.; labor 25 per cent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. When I first became acquainted with the tanning business, viz. in 1778, the price of sole leather in this place was equal to 28 cents; (in silver money;) harness leather 33½ per lb., and calf skins 106 cents per lb., being considerably higher than at present, although the materials and labor have risen as before stated. The case, I think, affords a striking evidence of the utility or necessity of continuing the tariff, and even increasing it on many articles. Previously to the revolution, although we abounded in every requisite material for making leather, yet very large quantities were imported from England; no power existed here to reject it, and foster our own manufactures; a consequence was, that when war came, the country was bare of leather, and suffered greatly. Another consequence was, a speedy rise in the price of about 60 per cent., which, with the monopoly that followed, increased the |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p> <p>24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?</p> <p>25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p> <p>26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p> <p>27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?</p> <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices?</p> | <p>production; and this monopoly and production, before the war closed, reduced the price ten per cent. When peace came, things returned nearly to the old condition; a free trade for the introduction of English manufactures; general paralización followed; the prices of commodities, fell, it is true, but the means to pay for them failed in a still greater degree. But since sufficient protection for leather has been given by our laws, the manufactured article has become abundant; for, though comparatively little is now done in this State, it has increased greatly in others where bark is plenty. The price of leather is very reasonable, much lower, especially sole leather, than in England; yet there can be no doubt but that the prejudices of some would call for it from thence if the duty should be taken off. Very few persons have a just idea of the effect which the importation of a fifth part of a commodity used would have on the prosperity of the manufacturer here. When the war of the revolution began, we were supposed to have a population of about three millions, say one-quarter of our present number.</p> <p>23. The existing duty appears sufficient, at least on sole leather; but no benefit can arise, perhaps much injury, from a reduction.</p> <p>24. I have no information on this subject.</p> <p>25. I am not competent to answer further than is found elsewhere.</p> <p>26. I have not the necessary means to enable me to be minute in answering this query. Some parts may be collected from the answers to other queries.</p> <p>27. I should find a difficulty in classifying the very few products a tanner uses, whether to call them agricultural or domestic productions. We do not use any foreign commodity, except some hides, which, in my concern, may amount to one-tenth part.</p> <p>29. The article cannot be made at reduced prices, by any ordinary and known process, without a corresponding reduction in labor, and in the raw materials, products of the country. One-half of the tanners in this State, have within the last twenty-five</p> |

## QUESTIONS.

## ANSWERS.

30. If it would cause you to abandon your business, in what way would you employ your capital?

31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?

32. Are not the manufactures of salt and iron remote from the points of importation out of foreign competition within a certain circle around them, and what is the extent of that circle?

33. Amount of capital; and what proportion the borrowed capital bears to that which is real?

34. What amount of reduction in the duties would enable the actual or real capital employed, to yield an interest of 6 per cent.; and how gradual the reduction should be?

35. If minimums should be abolished, and the duty assessed upon the real value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum?

36. What would be the operation of this change upon the frauds at present supposed to be practised?

37. Proportion which the production by the American manufacturers bears to the consumption?

38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?

39. Average profit of money or capital in the United States?

40. Average rate of wages?

years, either failed, reduced their business, or retired from it. What I might do, in the predicament suggested, is unknown, but it is probable that, in most cases of large business, where the manufacturer should sell at a less profit than the present, a loss would be sustained by his creditors, the country at large. Our observations, however, are meant to apply particularly to the old manufactories in the country at large. What may be done in some extensive establishments, with patented inventions, recently formed in the forests of New York and elsewhere, is not fully known to me.

30. I cannot answer this question. I am not fertile in finding resources.

31. Answered above.

32. I have not any knowledge of those things.

33. Answered already; have no borrowed capital.

34. The reduction of duties, in any degree, would not enable the manufacturer to obtain six per cent., though it might oblige him to accept of three, or less.

35. I am not acquainted with the subject.

36. I cannot say.

37. If the question relate to tanned leather only, I should say, according to my apprehension, almost the whole.

38. I do not possess the means to make the calculation.

39. Cannot say.

40. It is difficult to speak of average wages, and of different places; but so far as my knowledge extends, the common wages of a journeyman tanner, who finds himself, is about 75 cents per diem.

[NOTE.—These inquiries relate more particularly to manufactures carried on in large establishments. In respect to those branches, however, which are carried on in private workshops, as those of hats, shoes, saddlery, &c., such detailed information is not necessary.

It will be sufficient to state, in the aggregate, the amount of capital employed, the value of the manufactured articles, the number of persons employed, the rate of wages, the rate of profit upon the capital, what portion of materials is of American production; to what extent foreign articles, of the like kinds, enter into domestic consumption, and what reduction of duty could be made without increasing foreign competition in the home market.]

I did not read the above note until the answers were formed; otherwise they might, and probably would, have been curtailed, at least some of them;—the small business I do, not requiring or affording much information.

ISAAC H. STARR.

| QUESTIONS.                                                                                                                                                                                                                                                  | ANSWERS.                                                                                                            |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                   | 1. Delaware State, New Castle county.                                                                               |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                        | 2. Currying of leather.                                                                                             |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                     | 3. In 1821. Private.                                                                                                |
| 4. Capital invested in ground and buildings?                                                                                                                                                                                                                | 4. Seven thousand dollars.                                                                                          |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                             | 5. \$ 10,000; wages \$ 800 per annum                                                                                |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                       | 7. Decrease of profit owing to competition.                                                                         |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                       | 9. 6,000 calf-skins; 800 upper hides; 400 horse hides; 200 sides of belt leather.                                   |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                           | 12. Three men, one boy; wages \$300 per annum each man, boy's wages \$150 per ann.                                  |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                            | 13. Twelve hours, all the year.                                                                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                   | 16. Generally at the manufactory.                                                                                   |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                  | 17. None.                                                                                                           |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                    | 18. In the United States.                                                                                           |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                    | 19. None.                                                                                                           |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                  | 20. Generally at three months' credit.                                                                              |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                        | 22. Calf-skins \$ 27 per dozen, average; upper \$ 5.50 per hide; horse hides \$ 5.25 per hide; belt \$ 12 per hide. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you manufacture at reduced prices? | 29. It would cause me to abandon my business.                                                                       |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                              | 30. Cannot tell.                                                                                                    |

JAMES WEBB.

## DOCUMENT 15.—No. 65.

*Charles G. Denny, Currier, Newcastle County, Delaware.*

## QUESTIONS.

1. State and county in which the manufactory is situated?
2. Kind or description of the manufactory; and whether water, steam, or other power?
3. When established, and whether a joint stock concern?
4. Capital invested in ground and buildings, and water power and machinery?
5. Average amount in materials, and in cash for the purchase of materials and payment of wages?
9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?
12. Number of men, women, and children employed, and average wages of each class?
13. How many hours a day employed, and what portion of the year?
16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?
17. Whether foreign articles of the like kind enter into competition with them at such place of sale, and to what extent?
18. Where are the manufactures consumed?
19. Whether any of the manufactures are exported to foreign countries? and if so, where?
20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?
21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate?

## ANSWERS.

1. Delaware State, New Castle county.
2. Currying of leather; hand.
3. In 1827; private concern.
4. Ground, buildings, and machinery, three thousand dollars.
5. About \$ 5,000; payment of wages 300 dollars per annum.
9. From 10 to \$ 12,000.
12. Two men, three boys; average wages of men \$ 600 per annum, boys \$ 300 perann.
13. 10 hours, all the year.
16. Principally at the manufactory.
17. None.
18. In Wilmington.
19. Export some to the West Indies.
20. Half for cash; the balance on a credit of four months.
21. Increased in the rough material eight per cent.

## DOCUMENT 15.—No. 66.

*F. H. Holtzbecher's Tannery, Newcastle County, State of Delaware.*

## QUESTIONS.

1. State and county in which the manufactory is situated?
2. Kind or description of the manufactory; and whether water, steam, or other power?
3. When established, and whether a joint stock concern?

## ANSWERS.

1. My tannery is situated in the county of Newcastle, State of Delaware.
2. Tanning of leather; chiefly sole leather, made of South American hides.
3. This tannery was established six years ago, on my own account.

| QUESTIONS.                                                                                                                                                                                                                                                | ANSWERS.                                                                                                                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                               | 4. \$2,500, including ground, buildings, vats, machinery, and utensils.                                                                                                                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                           | 5. Raw hides, - - - \$3,700<br>120 cords Spanish oak bark, 1,200<br>Wages to hands in tan-yard, smiths, carpenters, and millwrights, bills and accidental charges, - - - 739<br>\$5,639                                                  |
| 7. Cause of increase (or decrease, as the case may be) of profit?                                                                                                                                                                                         | 7. Owing to increase of internal consumption, occasioned by increase of population, other manufacturing establishments, and exportation of shoes, boots, harnesses, &c.; the demand for all kinds of leather is considerably increasing. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                     | 9. Chiefly sole leather; amount of sales about \$8,000 per annum.                                                                                                                                                                        |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                           | 10. There are worked in annually 1,000 South American hides, worth \$3,700; 120 cords Spanish oak bark, worth 1,200.                                                                                                                     |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                           | 11. Am of opinion that leather can be manufactured in the United States as low as any where else.                                                                                                                                        |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                          | 12. 2 men whose wages are about \$300<br>2 boys do 250<br>2 horses, expense of keeping, 100<br>\$650                                                                                                                                     |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                          | 13. The hands are employed from sunrise to sunset every day, if weather permits.                                                                                                                                                         |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                           | 15. 2 horses generally, and from 2 to 4 oxen, to remove tan, and for other purposes.                                                                                                                                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                 | 16. The product of this establishment is disposed of at Baltimore, Philadelphia, and New York.                                                                                                                                           |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                | 17. Answered in query No. 11.                                                                                                                                                                                                            |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                  | 18. In the United States, British North American possessions, South America, and West India.<br>19. Answered in query No. 18.                                                                                                            |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                  |                                                                                                                                                                                                                                          |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                | 20. Leather is always sold on a credit of 4 and 6 months.                                                                                                                                                                                |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate? | 21. South American hides are nearly a double price at present, than they were 35 years ago, when I first became acquainted with them. The price of Spanish oak bark has also much increased; and so have wages and other expenses.       |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                      | 22. Sole leather has sold, in quantity, from 24 to 27 cents per lb.                                                                                                                                                                      |

| QUESTIONS.                                                                                                                      | ANSWERS.                                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                       | 1. Delaware State, Newcastle county.                                                                      |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                            | 2. Grain; water.                                                                                          |
| 3. When established; and whether a joint stock concern?                                                                         | 3. In 1831; private.                                                                                      |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                     | 4. One thousand dollars.                                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                 | 5. One hand at \$12. No money expended for materials, as all that the mill does is for country customers. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products? | 10. About one thousand bushels of grain.                                                                  |
| 12. Number of men, women, and children employed, and average wages of each class?                                               | 12. One man, \$12 per month.                                                                              |
| 18. Where are the manufactures consumed?                                                                                        | 18. In the country around.                                                                                |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                        | 19. None.                                                                                                 |

JOSEPH PHILLIPS,  
For GEORGE DAVIS.

## DOCUMENT 15.—No. 75.

*Grain and Lumber Establishment, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Delaware State, Newcastle county.                                                                                                              |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Grain and lumber; water.                                                                                                                       |
| 3. When established; and whether a joint stock concern?                                                                               | 3. In 1831.                                                                                                                                       |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                           | 4. Twelve thousand dollars.                                                                                                                       |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. One thousand two hundred and fifty dollars in all.                                                                                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Two hundred and fifty barrels of flour, at \$5 25; two hundred and fifty bushels of meal, 50 cents per bushel; twenty thousand feet of lumber. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. Ten thousand bushels of grain.                                                                                                                |

| QUESTIONS.                                                                                                                                                                                                                                                | ANSWERS.                                                            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                           | 10. Use from twelve to fifteen thousand bushels of grain; domestic. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                         | 12. Two men, about \$16 per week.                                   |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                          | 13. Average twelve hours, ten months in the year.                   |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                 | 16. Market in the neighborhood.                                     |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                  | 18. In the neighborhood.                                            |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                  | 19. None exported.                                                  |
| 20. Whether the manufacture is sold by the manufacturer for cash? If on credit, at what credit? if bartered, for what?                                                                                                                                    | 20. Cash.                                                           |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate? | 21. No increase or decrease.                                        |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                      | 22. From \$4 25 to \$8 per barrel.                                  |

| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Delaware, Newcastle county.                                                                        |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Grist and merchant flour mill; water power.                                                                 |
| 3. When established; and whether a joint stock concern?                                                                               | 3. In 1829; private.                                                                                           |
| 4. Capital invested in ground and buildings?                                                                                          | 4. Capital in ground and buildings, &c., &c., \$6,300.                                                         |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. Grain manufactured, 20,000 bushels; cash for the purchase of materials and payment of wages about \$20,000. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. 3,000 barrels of flour, and 100 barrels kiln dried corn meal per annum.                                     |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. 3 men; average wages \$18 per month.                                                                       |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. 17 hours per day; whole year.                                                                              |
| 15. Number of horses or other animals employed?                                                                                       | 15. 3 horses.                                                                                                  |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                             | 16. Market at Philadelphia, 40 miles.                                                                          |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 19. Export none.                                                                                               |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 20. Part cash, and a part on a credit of from 30 days to 4 months.                                             |

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                     |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Delaware State, New Castle county.                                                                                        |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Flour mill; water power.                                                                                                  |
| 3. When established; and whether a joint stock concern?                                                                               | 3. Seventy years; private.                                                                                                   |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                           | 4. About two thousand dollars.                                                                                               |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. About 11,000 bushels of grain manufactured; cash for the purchase of materials \$ 500; payment of wages \$ 300 per annum. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Five hundred barrels flour for sale.                                                                                      |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?       | 10. Quantity of raw materials 11,000 bushels grain, domestic.                                                                |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. Two men, one boy; average wages \$ 150 per annum.                                                                        |
| 13. How many hours a day employed; and what portion of the year?                                                                      | 13. Average seven hours per day, per year.                                                                                   |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                             | 16. Sent one and a half miles to market.                                                                                     |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?            | 17. No foreign competition.                                                                                                  |
| 18. Where are the manufactures consumed?                                                                                              | 18. In the surrounding country.                                                                                              |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 19. None.                                                                                                                    |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 20. Cash.                                                                                                                    |

| QUESTIONS.                                                                                                                 | ANSWERS.                                                                                               |
|----------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                  | 1. Delaware State, New Castle county.                                                                  |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                       | 2. Wheat flour, rye, corn, hulled and peal barley; water power.                                        |
| 3. When established; and whether a joint stock concern?                                                                    | 3. 1832; private concern.                                                                              |
| 4. Capital invested in ground and buildings; and water power and machinery?                                                | 4. Ten thousand dollars.                                                                               |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                            | 5. Average amount in materials, cash for the purchase of materials \$ 50,000; payment of wages \$ 850. |
| 12. Number of men, women, and children employed, and average wages of each class?                                          | 12. Four men at \$ 20 per month.                                                                       |
| 13. How many hours a day employed, and what portion of the year?                                                           | 13. Seventeen hours a day.                                                                             |
| 15. Number of horses or other animals employed?                                                                            | 15. Two horses.                                                                                        |
| 18. Where are the manufactures consumed?                                                                                   | 18. In the United States.                                                                              |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                   | 19. Export none.                                                                                       |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what? | 20. \$ 35,000 cash, and \$ 15,000 credit.                                                              |

## DOCUMENT 15.—No. 86—Continued.

| QUESTIONS.                                                                                                                                    | ANSWERS.                                                              |
|-----------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?    | 23. The present duty on barley is sufficient, but should not be less. |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions? | 27. \$ 300 per annum for agricultural products.                       |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                | 30. In agriculture.                                                   |

A. FOUNTAIN.

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Delaware State, New Castle county.                                                                    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Flour mill and saw mill.                                                                              |
| 3. When established; and whether a joint stock concern?                                                                               | 3. In 1829; private concern.                                                                             |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                           | 4. Four thousand dollars.                                                                                |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. \$ 20; wages \$ 125 per annum.                                                                        |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. 11,000 bushels of grain; wheat, corn, rye, huckwheat; saw about 100,000 feet of boards and scantling. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                     | 12. Two men and one boy; \$ 125 dollars per annum for each man.                                          |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. Twelve hours.                                                                                        |
| 15. Number of horses or other animals employed?                                                                                       | 15. One horse.                                                                                           |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                             | 16. Market at Wilmington.                                                                                |
| 18. Where are the manufactures consumed?                                                                                              | 18. In the country around.                                                                               |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                              | 19. None.                                                                                                |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?            | 20. Cash.                                                                                                |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                  | 22. \$ 4.50 to \$ 6 per barrel.                                                                          |

## DELAWARE MANUFACTURES.—REPORT J. GILPIN.

## DOCUMENT 16.—No. 1.

To the Hon. LOUIS M'LANE,

*Secretary of the Treasury of the United States, &c. &c.*

SIR: I had the honor to receive your circular letter of the 7th of February, requesting me to collect information of the manufactures of this State, in conformity to the resolutions of Congress, and sundry queries annexed. In consequence of which, I immediately prepared to execute the duty, and have been much engaged in it since. Two circumstances have materially retarded it; first, the bad state of the roads and weather during an uncommonly inclement season; and, secondly, the difficulty of obtaining the returns which have required much personal attention; and I may add, that though this State is small, the extent to go over, with the requisite attention, is considerable. Another fortnight would have done much in giving accuracy to the business, and in enlarging it, but since the demands of the Legislature require it as it is, these circumstances are mentioned merely to apologize for the unavoidable want of perfection with which it is attended.

The State of Delaware comprises, as is well known, but three counties, with an area of 1,400 square miles, and a population of 57,000 white, and 19,000 black inhabitants. The State has very little commerce, its productions being sent to Baltimore, New York, and Philadelphia—chiefly the latter. Manufactures have at all times existed in it, and have been diffused through the State, though in the two southern counties they are chiefly household or domestic; but the northern part of the State, particularly the section of Newcastle county north of Christiana creek, is, and has been for more than half a century, one of the most flourishing manufacturing districts in the United States, owing to its great command of water power upon or near to navigation. Independent of these manufactures, the State is largely agricultural, particularly in wheat and Indian corn, which constitute its staple manufacture; and there is, besides, a very flourishing agriculture in other articles supported by, and dependant on, its manufactures.

Early after receiving your circular, I transmitted the circular No. 1 to persons of the best general knowledge in the respective counties, to obtain information of the manufactures, upon which, the circular No. 2, containing the queries, was sent to the manufacturers themselves, and persons employed to collect their replies; as their replies, with many other statements and letters constitute the documents on the subject, they are transmitted herewith, and of course will speak for themselves, especially as to details; but since a condensed view of the subject is proper and requested, I shall give it corrected as far as time has admitted by local knowledge and personal investigation.

It would be extremely desirable that the returns should contain the most perfect estimate of the value of the manufactures, especially as the object of the inquiry is to ascertain the protection they require from the Government: the profit or loss of them is important as to that protection to the individuals who conduct them, as well as to the State of which they constitute an important part of its public wealth; but to ascertain their value with the precision which would be desirable, has not been altogether so easy; for, independent of disclosures of profits, (always a circumstance of delicacy,) many of the manufacturers are really in a situation of so much struggle against past or present difficulties, and the uncertain prospect before them as to public measures, that they find it difficult, if not impossible, to furnish them: more time would certainly have given much more clearness on the subject: as it is I shall mention what has been furnished, with great candor, by many of the manufacturers, and the best general view I have been able to form.

In any estimate we may make of the value of the manufactures, it seems correct to observe, that where, as in many cases, the capital, labor, and raw material, are all furnished within the State, the whole product of the manufacture may be taken as profit to it; in case either are derived from abroad, they are to be deducted, which principally applies to raw materials, and where these are not derived from foreign sources, they mingle in the profit of the United States: in this respect the amount of profit to the State is wholly distinct from that of individuals, which depends on the difference between the actual cost and product to them.

The principal manufactures of the State may be seen by the annexed arranged list; them, but touching first, sir, on those which are more immediately designated in the resolution of Congress, I shall proceed to observe:

That sugar is not made in the State, nor is hemp either grown or manufactured in it, or flax, except for domestic purposes.

Of salt, there is a small manufacture on the sea-coast, by boiling or evaporating salt water in pans. I have not been able to procure an exact return of it, but it is described as a small

concern, conducted by poor people, and sold in the neighborhood, to the amount of about 10,000 bushels annually, and perhaps \$5,000 which seems to be a clear profit to the State.

Of iron, there are native ores in several parts of the State, and there were formerly works in Newcastle county; a considerable export of the ore is made to New Jersey from Sussex county, in which are the only mines in the State now worked, and the only furnace is that of Col. William D. Waples: of this a very accurate account is given in his report, by which it appears that there is a capital of about 40,000 invested in it, that it employs about 70 persons, and produces 600 tons of iron of the value of about \$26,000; the whole of which, as it is produced from domestic materials, may be taken as a net profit to the State. Col. Waples states the prices of his iron to have fallen considerably within a few years, and that the profit is now not more than 6 to 10 per cent.

There are two forges in the vicinity of this furnace, which probably convert a part of its product into bar iron for the use of the neighborhood, but I have no returns of them.

The other manufactures of iron, except common smith's shops, are chiefly in the neighborhood of Wilmington, not dependant on the above, as they derive their supplies chiefly from Pennsylvania or elsewhere. They are as follows:

One mill of Mr. Allen Wood for rolling and making shovels, spades, saws, &c., this employs a capital of about \$15,000; 80 tons of iron and steel; 10 men; and the product is \$16,000, derived from American materials, with a profit of 15 to 20 per cent. on the moneyed capital.

There are two foundries of castings for machinery and country uses in Wilmington, the united capitals of which are perhaps \$30,000; their labor, 35 persons, and their product about \$50,000, all which would be a profit to the State, but, that, of about 450 tons of pig iron which they consume, 120 is of foreign ore: this may, therefore, reduce the State value to \$45,000; the rate of profit on this business is not stated, but it appears reasonably profitable, perhaps 10 or 12 per cent.

There are six manufactories for machinery, of which two only have given returns; from them, it is probable, they employ altogether a capital of about \$60,000; about 100 men and boys, and about 200 tons of iron, and produce the value of \$75,000, chiefly from American materials; the profit on these manufactures is stated to be 8 per cent.

The whole of the iron manufacture in the State appears to employ a capital of about \$135,000, about 200 men and boys, and to produce annually the value of \$160,000.

Of the cotton manufacture, begun in 1794, little progress was made till the late war, during which, nearly all the present establishments were formed, with many that are now extinct.

At present there are in the State about fifteen establishments, some of them mixed with wool. The returns from few of them are made with exactness, but it is pretty well ascertained that they operate with about 25,000 spindles, a capital of \$500,000 in buildings and machinery, and \$150,000 of money, making altogether \$650,000; 700 persons; consuming 1,500,000 lbs. of cotton, and producing 1,350,000 lbs. of yarn, of the value of \$310,000.

Of the profits of this business, it must be observed, that it has been subject to such extreme fluctuations that no correct estimate can be made for a considerable length of time, but it is candidly admitted by some of the most respectable manufacturers, that, for the last three years, it has been 10 to 12 per cent., with a prospect of decline, however, at present, and certainly so if the tariff is reduced; upon fine yarns, that is No. 40 and upwards, it is said not to be a protection, as they are still imported lower than they can be made.

Of the woollen manufacture, there were some large establishments during the war which have gone down. It is now supported by two most respectable manufactories of Charles S. Dupont and William Young, esqs., on the Brandywine, with the most perfect machinery, skill, and economy: at both these, cloths of the best quality have been made, and they are continued, particularly by Mr. Dupont. Mr. Young's and Messrs. Hilton's manufactories have been of late more devoted to the mixed article of wool and cotton, called sattinets; and in Kent county the article of kerseys is united with cassinets. Of the other manufactures mentioned in the list, many of them are for preparing the wool, and fulling, for household manufactures.

As all the returns of this manufacture have not been made, it is not easy to form a condensed view of it further than those of Messrs. Dupont, Young, Hilton, and those from Smyrna will show. It is probable, however, that this manufacture employs, independent of the cotton connected with it, \$150,000 capital, 150 workmen, consumes 130,000 lbs. of wool, and produces \$120,000 of manufactured articles, and that 80 per cent. of the raw material is derived from the United States. Of this manufacture, in the main, it may, I believe, be justly said, that it pays very little profit, and is in a languishing situation, which is attributed to two causes, first, the number of light English cloths brought in and sold at auction; and secondly, the duty on the low priced foreign wool, which otherwise could be brought in and manufactured to advantage.

The manufacture of paper is one of the oldest in the country, having been established for fifty years, and it is carried to great perfection, for all kinds of fine writing and drawing paper, on the Brandywine, where the revolving machinery was first introduced by Mr. Thomas Gilpin, nearly twenty years ago: the return of this is given with great accuracy, by which it will appear, that it employs a capital of \$150,000; 20 men, 10 boys, and 50 women and children, altogether 80, and supports a population of 200 persons; that it manufactures materials of 100 tons, and the value of \$26,000, and produces \$60,000 annually, the whole of which, it is to be observed, is made of a refuse article of society, altogether American.

Besides this, there exists in the State, the respectable manufactory of Messrs. Meeteer, near Newark, and two others on a smaller scale; the aggregate of the manufacture may be estimated at \$200,000, its labor 130, and its product \$100,000, which, as it is wholly of American material, may be taken as a clear profit to the State. The profit of the manufacture very little exceeds an interest of 6 per cent. on the whole capital vested in it, and it is one of those which has been so long established as to be conducted at prices so moderate, that it is not affected by the foreign imports of good paper; but it has been at times extremely hurt by paper of low quality, brought in and sold at auction, for which it is the protecting duties are necessary to it.

The powder manufactures of this State are the largest of the kind in the United States, particularly that of Messrs. Dupont, on the Brandywine, not only in extent, but in every improvement that can contribute to its goodness in quality; the consequence of which is, that it has supplanted the demand for foreign powder for all domestic purposes. Mr. Dupont's own report on the subject gives all the detail of it that is necessary, by which it will be seen that it employs a capital of \$180,000, occupies 140 persons, and produces 850,000 lbs. of powder of the value of \$170,000.

The second and only other manufacture of powder in the State, is that of Mr. Gareché, the details of which are also given in his report; this manufacture, it is to be observed, is by steam; the two establishments together occupy a capital of \$238,000, employ 168 men, and manufacture 1,100,000 lbs. of powder, worth \$250,000.

Of these manufactures, however, it is to be observed, that the great articles of sulphur and saltpetre are largely imported from abroad, that the profit to the State consists chiefly in the labor, which may be estimated at \$140,000. The private profit is stated by Mr. Gareché to be from 12 to 15 per cent. on the raw material, when explosions do not happen, to which this manufacture is particularly exposed. Like paper, it has supplanted the foreign article of good quality, but has been greatly injured by old or inferior powder brought in and sold at auction, against which it requires the protecting duties.

The leather manufacture is a very old one in the State, founded on its own materials, but for many years past it has been extended to foreign hides; it was more extensive formerly in Newcastle county, than at present, owing to the high price of bark, but it has, on that account, increased in Kent and Sussex. The return of Mr. Isaac Jackson furnishes very clear ideas of it; it seems probable that there are about 30 tanneries in the State, that they employ a capital altogether of \$150,000, 120 persons, and produce \$150,000, of which, however, at least \$50,000 may be deducted for foreign hides, leaving a profit of \$100,000 to the State.

Of bark, of the black oak or quercitron, there are about 20 mills in the State for grinding it for exportation, the capital of which may be reckoned at \$50,000, the labor at 120 men, and the product \$80,000, all which is a clear profit to the State.

The manufacture of flour may be considered as the staple, or almost the indigenous one of the State. Of this, the 12 mills at Brandywine bridge may be considered as the first class, manufacturing only for merchant work, and the details, are correctly given; 10 more may be taken as a second class for merchant and grist work united, the two classes together employ a capital of \$600,000, and about 70 men; manufacture 480,000 bushels of wheat, and 250,000 bushels of corn, and produce 96,000 barrels of flour, and 55,000 of Indian meal, value together \$816,000; of this a considerable part of the raw material is derived from the neighboring States, but the whole is a fair product of the United States, which may be termed an agricultural manufacture, necessary to put the produce of the soil into a state for exportation. Besides these, there are, perhaps, 50 mills in the State, of a third class, for grist or grinding the wheat and corn of the country for domestic use; the capital of which may be reckoned at \$100,000, the persons employed at 100, and the product at \$73,000, but as this product is consumed at home, the object in enumerating these mills is chiefly to show the amount of their manufacturing capital and labor.

There are, in the same manner, about 40 saw mills for the manufacture of timber, etc. for domestic use, which employ a capital of \$40,000, and 80 men; altogether, it is probable they produce to the value of \$40,000, though there is very little data for exactness respecting them, nor is it of importance.

There are two manufactures of sauff operating upon tobacco of the United States, but the returns of them are two inefficient to notice them, as well as two or three oil mills for flax-seed, confined to country use.

Of the common trades, time has not admitted estimates to be formed; but having thus mentioned all that can be reached of the principal manufactures of the State, with such remarks as have seemed necessary respecting their profits, and the duties upon them, it only remains to bring them into an aggregate form, which I have done, under the three heads of capital, labor, and product, as follows:

|           | Capital.    | Labor.      | Product.   |
|-----------|-------------|-------------|------------|
| Flour     | \$ 600,000  | 70 men      | \$ 818,000 |
| Iron      | 135,000     | 200 do      | 160,000    |
| Cotton    | 650,000     | 700 persons | 310,000    |
| Wool      | 150,000     | 150 do      | 120,000    |
| Paper     | 200,000     | 130 do      | 100,000    |
| Gunpowder | 238,000     | 168 men     | 250,000    |
| Leather   | 150,000     | 120 do      | 150,000    |
| Oak bark  | 50,000      | 120 do      | 80,000     |
| Salt      | 2,000       | 10 do       | 5,000      |
|           | \$2,175,000 | 1,668       | 1,991,000  |

The number of persons supported by these manufactures may be taken as at least 3 to 1 of those employed, or 5,000.

The flour manufacture consumes, of agricultural produce, 480,000 bushels wheat, and 250,000 bushels of corn, value \$622,000.

The cotton manufacture consumes 1,500,000 lbs. of raw cotton: in the estimate of this manufacture, I have included the product of the power looms employed.

Having submitted, in a detached form, what has occurred to me on the general subject of the tariff and labor of the country, I am not aware of any other part of the duty required of me being unattended to, as far as time has admitted, and I beg leave to subscribe myself, sir, with the highest respect,

Your obedient humble servant,  
JOS. GILPIN.

#### ARRANGED LIST OF THE DELAWARE MANUFACTORIES.

##### *Proprietors of Flour Mills.*

*1st class Merchant Mills.*—James Price and Sons, James Canby and Sons, Samuel Poole, Samuel Shipley, Samuel Bailey.

*2d class Merchant and Grist Mills.*—Caleb Churchman, James Buckingham, William Adkins, G. C. Phillips, George Platt, Samuel Stroud, Chamberlain, William Cooch, John Harlan.

*3d class Grist Mills.*—B. Grubb, Henry Webster, George Davis, Jacob Smith, John C. Farra, Jones, Dupont, Kirk, Richardson, Isaac Gregg, Springer M'Daniel, Joshua Lobb, Andrew Reynolds, Johnson, England, Rankin, Crawford, Kelly, Janvier, Meeteer, Bay, Samuel Thomas, John Carnan, John Grimm, Samuel L. Eccles, Henry Walker, Ira Lyons, Duck Creek Mill, N. Ridgely, Ezekiel Cowgill, Howell, Melliston, Mifflin, Fishers, Bowmill, Virdin, Cooper, Douglass, Bean, Milford Mill.

##### *Proprietors of Saw Mills.*

Abner Cloud, J. and E. Sharpley, John Beeson, Jacob Smith, George Craig & Co., William Atkins, Springer M'Daniel, Bishop, Barker, Joshua Lobb, J. C. Phillips, George Platt, Johnson, Samuel Stroud, M'Beth, Vandegrift, Ira Lyons, N. Ridgely, Ezekiel Cowgill, Lewis, Bowmill, Virdin, Cooper, Dover, Bean, Smith, Alabama.

##### *Proprietors of Cotton.*

Garret and Pusey, Joseph Bancroft, Breck and Swift, William Hilton, Hutchinson, William Young, Harry Connelly, John Connelly, Mitchell and Quin, Marshall, Jacob Pusey, Stafford, Trump, Alexander V. Murphy, Richard Hoarding.

##### *Proprietors of Woollen.*

Charles J. Dupont, Sacriste, William Young, Henry Clarke, Samuel P. Johnson, C. J. Dougherty, Jaspard Tranchant, Jacob Vandegrift, Alexander V. Murphy, Richard Hoald-

ing, Ezekiel Cowgill, Charles Stedham, Derrick Bernard, Simon K. Wilson, Arthur Milby, Samuel Painter, Theodore Mitchell, Caleb Ross. Fulling mills—S. P. Johnson, Alexander V. Murphy, Richard Hoalding.

*Proprietors of Iron.*

Furnace—William D. Waples. Forge—Josiah Polk, Solomon Prettyman. Rolling mill—Allen Wood. Foundries—Mahlon Betts, Bowmill, Roe. Machine makers—Reeves and Wood, George Hodgson, Jacob Alrich and Son, M'Clary and Bush, Thomas Hill, Walker and Pinson, Wagstaffe.

*Proprietors of Paper.*

J. and T. Gilpin, now the Brandywine Manufacturing Company, William Meeteer & Co., John C. Farra, Falls.

*Proprietors of Gunpowder.*

E. J. Dupont & Co., Eleutherian mills, G. P. Gareschie.

*Proprietors of Tanneries, Leather.*

John and A. Peterson, Green and Scott, James Green, Thomas Clark, Benjamin Polk, Peter M. Darby, William D. Waples, Aaron Marvel, William D. Cooper, Gov. Hazzard, Nathan Vickers, John Richards, William Tunnell, William Russel, Robert Houston W., Robert Houston R., William Dunning.

*Proprietors of Bark Mills.*

Benjamin Webb, Staples and Craig, George Platt, Rankin, Alexander V. Murphy, R. A. Crawford, George Stedham, Pennywell and Sipple, Charles Stedham, Joseph Smithers, Joseph C. Clunn, Charles Hannoway, Simon K. Wilson, Joseph Maull, Gideon Waples, Solomon Prettyman, Stephen Houston, George Craig & Co., James Walker, Samuel Stroud.

## CIRCULAR.

WILMINGTON, DEL., *February 15, 1832.*

SIR: The Secretary of the Treasury having been required by two resolutions of the House of Representatives of the 19th of January, to collect and furnish it with facts and information of the manufactures of wool, cotton, hemp, iron, sugar, salt, and such other articles as are manufactured to considerable extent in the United States, has authorized and requested me to collect and obtain such information within the State of Delaware; and as it is obvious that the formation of a faithful statistical document of the manufactures of the State must be eminently useful not only upon the present but every future occasion, I am desirous to execute the wishes of the Secretary, and to form such document, with the utmost possible accuracy and impartiality; but as I must for this purpose depend on the facts furnished me by those who are interested in the manufactures, I beg leave most respectfully to solicit from you the necessary information respecting those in which you are engaged: and as the information required by Congress and the Secretary is intended to assist the operations of the present session, despatch in furnishing it becomes essential. I shall, therefore, be obliged by your giving it the earliest possible attention, and transmitting it by post, directed to me, at Wilmington.

Believe me, with great respect,  
Your obedient humble servant,

JOSHUA GILPIN.

In order to guide your communications, I subjoin the resolutions and queries contained in the Secretary's instructions, and, in addition to such specific replies as you may think proper to give to the queries, you are invited to furnish any information or suggestions you may think useful to the adjustment of the tariff.

DOVER, 29th February, 1832.

DEAR SIR: I received, on Monday evening, your letter of the 23d instant, and have since used all the means in my power to ascertain the names of such manufacturers as are in Kent and Sussex.

There are not, I believe, any manufactures of cotton, hemp, or sugar; nor of salt, except, I understand, a few on the seaboard in Sussex, who make it in a small way, and whose names and places of residence I could not learn.

I have heard of but one manufacture of woollen cloth in this county or Sussex; his name is Alexander V. Murphy, and he resides near Smyrna; but to what extent he carries it on I do not know.

The following persons are manufacturers of iron, but how extensively I cannot say, viz. George Bonwill, near Frederica, and William Roe, near Canterbury, in this county; and Daniel Barnard, at Millsborough, and Solomon Prettyman, Seaford, in Sussex county.

Yours, very respectfully and truly,

H. M. RIDGELY.

JOSHUA GILPIN, Esq., near Wilmington, Del.

GEORGETOWN, 28th February, 1832.

SIR: I received, by last Saturday's mail, your printed letter, dated the 15th instant, requesting me to furnish you with a list of the principal manufactures and manufacturers in this county, to whom you may more particularly address yourself for the specific information of those in which they are engaged; as, also, for any such information I may be pleased to furnish, in order to enable you to comply with a request of the Secretary of the Treasury for information to enable him to comply with two resolutions of the House of Representatives, requiring him to collect and furnish it, with facts and information of the manufactures of wool, cotton, hemp, iron, sugar, salt, and such other articles as are manufactured to considerable extent in the United States. I have no information to enable me to furnish a statistical account of any articles mentioned, or of any other manufactured in this county, but, agreeably to your request, refer you to those engaged in the articles mentioned below.

Wool is not manufactured into cloth at any mill in this county, but is carded for domestic purposes by wool carding machinery—at Millsborough, by Derrick Bernard & Co.; near do., by Dr. Simon K. Wilson; Milton, by Arthur Milby; near do., by Samuel Painter, Esq.; Laurel, by Theodore Mitchell; near do., by Caleb Ross.

Cotton: this article is not made into cloth at any mill in the county. Arthur Milby has a set of spindles for spinning, but I believe they have not been in use for several years. The domestic spinning of this article, in families, has entirely ceased.

Hemp is not raised or manufactured in the county.

Iron: one furnace for castings and pig iron, at Millsborough, carried on by Samuel G. Wright, of New Jersey, and Col. Wm. D. Waples, of Millsborough; one forge near Laurel, by Josiah Polk; one forge in Nanticoke Hundred, by Solomon Prettyman, of Seaford.

Sugar is not made in this county.

Salt is made by boiling salt water in small pans, by individuals, a few miles below Lewestown, and in Baltimore Hundred, but by whom I am not informed. From the best information now in my power, I presume there are about 10,000 bushels made annually in the county.

Linseed Oil: Peter F. Causey, Esq., near Milford, but he, himself, lives in Milford.

Quercitron, or yellow oak bark, called here, black oak—by Simon K. Wilson, near Millsborough; Solomon Prettyman, Seaford; Dr. John Cary, deceased, his executor, William N. Polk, do.; Shepherd. Houston, near Lewestown; Dr. Joseph Maull, Milton; Gideon Waples, do.

Leather: Dagsborough, Wm. Dunning; Millsborough, Wm. D. Waples; Aaron Morrel, near do.; William Russel, Lewestown; Milton, Governor Hazzard; Laurel, Wm. B. Cooper, Esq.; Concord, Robert Houston, son of John; Bridgeville, Robert Houston, son of Liston; Seaford, Nathan Vickers, Esq.; Georgetown, John Richards; Do., Wm. Tunnell.

Richards tans about 1,800 sides of Spanish hides, and Wm. Tunnell about 1,000 Spanish hides, and a few country.

Flour: I believe there is none manufactured for exportation.

Corn meal: a few years ago, some of this article was manufactured at \_\_\_\_\_ and at Middleford; but at this time, and for some years past, I believe none.

## DOCUMENT 16.—No. 2—Continued.

This is all the information in my power to furnish. I hope the result of the information furnished to the Secretary of the Treasury from the different sections of the United States, will produce such a union and concord in Congress, on the subject of the modification of the tariff, that will harmonize and unite in brotherly union the North and the South, and West, so that we may continue one people. If I can be of any further service in this business, it will give me pleasure to oblige you, as well as my friend the Secretary of the Treasury. But for two weeks, after next Monday, I shall be so engaged that I could not devote any time to the subject; and after the first of April, I shall be also engaged. But after the courts are over it will give me pleasure to attend to your calls.

Very respectfully,

PETER ROBINSON.

N. B. Perhaps I ought to inform you that most of the iron ore of this county is transported to New Jersey for the furnaces there. It costs them about five dollars per ton to get it landed in New Jersey.

P. R.

Mr. JOSHUA GILPIN.

*Lewes, March 1, 1832.*

DEAR SIR: I received yours a few days past, requesting information and facts relative to manufactures. We have none in our county, except iron and salt: as to the first, you will receive from the owners of the furnace at Millsborough, viz. Samuel G. Wright, of Philadelphia, Col. Wm. D. Waples, and Mr. D. Bernard, at Millsborough, the most accurate information. There are no other works where iron is manufactured to any extent in Sussex, though much iron ore is raised and transported to Jersey. As it respects salt, the manufacture by evaporation has been neglected for some years; there are some persons at Rehoboth, and some at Indian River, who have pans or kettles, and boil salt when the water is good, in warm weather, though in a small way, to supply the neighborhood only. If there are any other manufactures, except in families, for their own use, I have not heard of them.

With real esteem,

I am your faithful friend,

DANIEL RODNEY.

JOSHUA GILPIN, Esq.

*NAAMAN'S CREEK, February 23, 1832.*

SIR: Your letter of the 23d instant, came duly to hand; and I shall endeavor to give you what information I possess of the manufactories and manufacturers in Brandywine Hundred, except those on Brandywine Creek and its vicinity, as I presume you will get information respecting that section of country from those who live there.

The following are the owners, manufacturers, manufactories, and their situations, as far as my recollection serves me:

1. Owner, Caleb Churchman; manufacturer, John T. Bloomall; merchant flour mill; situated on the tide water of Naaman's Creek.
2. Owner and manufacturer, Bayard Grubb; situated on a branch of Naaman's Creek; manufactory, flour mill.
3. Owner, George Buck; manufactory, oil mill, at present unoccupied; situated on a branch of Naaman's Creek.
4. Owner and manufacturer, Abner Cloud; manufactory, saw mill; situated on a branch of Naaman's Creek.
5. Owner and manufacturer, George Davis; manufactories, flour mill and saw mill; situated on Shellpot Creek.
6. Owner and manufacturer, name not recollected; situated near the post road on Shellpot Creek; manufactory, flour mill.
7. Owner and manufacturer, John Beason, situated on Stoney Creek; manufactory, saw mill.
8. Owners and manufacturers, Jacob and Esau Sharpley; manufactories, saw mill and wool carding; situated on Shellpot Creek.

Yours, very respectfully,

THOS. ROBINSON.

JOSHUA GILPIN, Esq.

NAAMAN'S CREEK, March 6, 1832.

DEAR SIR: Your favor of the 4th instant, I have received to-day. As regards the mill at Naaman's Creek, the present owner paid John Bellach, (deceased,) \$10,000 for it; but I understand offers it for sale at \$6,000, owing to its being much out of repair. The present tenant, J. T. Bloomall, pays \$225 per annum for it: the property would rent for more, but a part of the house, store-house, and stabling, is occupied by persons who are engaged in getting out stone for breakwater and railroads.

I think if the miller occupied the whole of the property, would pay, say, \$350.

As regards the other mills which I stated in my former letter, the saw mills would rent for \$100 per annum, each; the flour mills for about \$200 per annum, each. The mill at Naaman's Creek requires two hands, and suppose could grind 40,000 bushels of wheat per year. One hand could carry on either of the other mills.

Yours, respectfully,

THOS. ROBINSON.

JOSHUA GILPIN, Esq.

## BRANDYWINE FLOUR MILLS.

## STATISTICAL ESTIMATE OF THE MANUFACTURES OF DELAWARE—CONTINUED.

## Newcastle County—Continued.

Brandywine Creek: manufactures at the bridge, at the head of tide water.

## 1. Corn or flour mills:

|                                                                                                                   |          |                  |
|-------------------------------------------------------------------------------------------------------------------|----------|------------------|
| 12 mills of the first class, containing 12 water wheels and 24 pairs of mill stones; value, with the dwelling, at | \$20,000 | \$240,000        |
| 16 cooper's shops and dwellings, at                                                                               | 1,000    | 16,000           |
| 18 river craft sloops, at                                                                                         | 2,000    | 36,000           |
|                                                                                                                   |          | <u>\$292,000</u> |

|                                       |          |                |
|---------------------------------------|----------|----------------|
| Moneyed capital employed at each mill | \$15,000 | \$180,000      |
| Total of taxed and moneyed capital    |          | <u>472,000</u> |

## Annual manufacture, raw material and value:

|                                                                |           |                  |

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                         | 2. Five water wheels, and ten pair stones.                             |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                  | 4. One hundred thousand dollars.                                       |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                              | 5. Fifty thousand dollars.                                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                        | 9. 26,000 barrels flour, at \$6 50; 30,000 barrels corn, at \$3.       |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                              | 10. 130,000 bush. wheat, at \$1 25; 120,000 bushels corn, at 50 cents. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                            | 12. Fifty men; no women or children; at \$1 each; 25 per mill.         |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                             | 13. Twenty-four hours; ten months.                                     |
| 14. Rate of wages of similar classes otherwise employed in the same State and county; in other States; and in foreign countries?                                                                                                                             | 14. About the same.                                                    |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                    | 16. Sent to other parts of the United States.                          |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                   | 17. None.                                                              |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                     | 18. Corn meal to West Indies; thence to be exported.                   |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                     | 19. Answered before.                                                   |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                   | 20. Ninety and 120 days' credit.                                       |
| 21. Whether the cost of the manufactured article (to the manufacturer,) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. Not much increase.                                                 |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                             | 27. All agricultural.                                                  |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States; and what amount in your own State?                                                                                                                         | 28. One hundred and twenty thousand dollars.                           |
| 40. Average rate of wages?                                                                                                                                                                                                                                   | 40. One dollar per day.                                                |

BRANDYWINE, February 28, 1832.

ESTEEMED FRIEND: Thy note of yesterday, with the printed circular annexed, was received this morning. I proceed, at once, to give such information in relation to our establishment here for the manufacture of grain, as may be serviceable in furnishing the statistical account which thee is preparing.

We have here twelve mills for the manufacture of grain; also, one large cotton factory, the lower story of which is occupied as a machine shop. The factory is carried on by Thomas Garrett and Jacob Pusey, and the machine establishment by Wm. Reeve, to whom I refer for information in relation to their respective branches of business.

We manufacture here both wheat and corn; it would probably be as near the truth as we can come, to say nine of the mills are engaged in grinding wheat, and would manufacture, annually, 40,000 bushels each, or 360,000 bushels, and the average price may be set down at not less than \$1½ per bushel. \$450,000

Kiln dried corn is manufactured with much more facility than wheat, and we may safely say 60,000 bushels for each mill; say for the three mills, 180,000 bushels, at 60 cents per bushel. 108,000

We have here 16 cooper shops; the annual value of work would exceed \$2,000 each. 32,000

A large proportion of our grain is brought from a distance, say Jersey, Maryland, and Virginia, and gives employ to a number of vessels not owned here; but each mill would give employ to a sloop of about 40 tons, and of \$2,000 value. 24,000

\$614,000

If the value of the mills is desired, thee is as competent as myself to affix a value on them. I may remark that the borough purchased one of them a few years since, for which they gave \$28,000.

Of millers, coopers, and shallopmen, we employ about 150; all men, and a large portion of them with families.

Very respectfully, thy friend,

JAS. CANBY.

JOSHUA GILPIN, Esq.

*Samuel Bailey's Mill, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Newcastle, Delaware.                                                                                      |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Water power; manufacture, flour, kiln dried corn meal, quercitron bark, and lumber; barrels and hogsheds. |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1820.                                                                                                  |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Thirty thousand dollars.                                                                                  |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Various.                                                                                                  |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Various.                                                                                                  |

| QUESTIONS.                                                                                                                 | ANSWERS.                                                                                                                                                                                             |
|----------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12. Number of men, women, and children employed; and average wages of each class?                                          | 12. Twenty-three men employed; average wages 87½ cents per day.                                                                                                                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                  | 16. Philadelphia, New York, Wilmington, and neighborhood.                                                                                                                                            |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent? | 17. The greatest injury sustained by the manufacturers of flour, &c., is encouragement given to the produce of the lakes finding a market in Canada, and from thence to England and the West Indies. |

STAUNTON MILLS, *April 13, 1832.*

SAMUEL BAILEY.

CANTWELL'S BRIDGE, *March 21, 1832.*

DEAR SIR: Yours of the 9th instant, enclosing circulars for distribution among the millers of our neighborhood, is received. I have sent a copy to each of the following persons: John Ginn, Cyrus Tatman, Alexander V. Murphy, Thomas Murphy, Samuel Eccles, John H. Cannon, Jacob Vandegrift, Samuel H. Truman.

In relation to the information you wish of the value of the mills, &c., I can only give you a very imperfect estimate, as my personal knowledge of such real estate, and of the particular properties hereafter enumerated, is too limited to be relied on for its accuracy. I have, however, availed myself of the advice of a neighbor of some experience, and our joint estimate and valuation is as follows:

On Appoquinimink Creek:

Grist mill, owned and occupied by John Cannon; two pair of stones, one water wheel; manufactures, say 2,000 barrels Indian meal, 1,000 barrels flour per year; employs, say two men in the mill. Valued at \$3,500, including dwelling, without the farm attached.

Grist mill, owned by the heirs of Samuel Thomas, occupied by Cyrus Tatman; two pair stones, one water wheel; manufactures 2,000 barrels meal, 2,000 barrels flour per year; employs three hands in the mill. Valued at \$4,000, exclusive of the farm attached.

Grist mill, owned by John Ginn, and occupied by tenants; manufactures about the same as Cannon's, and gives employment to about the same number of persons. The buildings being inferior, we value this property at \$3,000.

Grist mill, owned and occupied by Samuel L. Eccles; same number of stones and water wheel; manufactures about 1,000 barrels meal, 600 barrels flour; employs two men. Valued at \$2,000.

A mill seat not occupied, on a branch of this creek near St. Ann's Church. Value not estimated.

Grist mill, saw mill, and clover seed mill, on Back Creek, Cecil county, Maryland, owned by Samuel H. Truman. I am not informed as to the capacity of this mill for manufacturing, and therefore make no estimate. The property, I should suppose, worth at least \$5,000.

Grist mill, on the head of Bohemia, owned by the heirs of James A. Bayard, esq., deceased, occupied by Thomas Murphy; two pair stones, one water wheel; manufactures yearly, say 2,000 barrels meal, and 1,000 barrels flour; employs two men in the mill. Valued at \$3,000.

Slighter's mill, down and in ruins, near the above grist mill, at the head of Sassafra, owned by William A. Miller. This has been one of the best properties of the kind in this part of the country; it is now, however, in bad order; its capacity to manufacture is, perhaps, about equal to the Bayard mill abovementioned.

On Black Bird: Mill occupied by Ira Lyons, with saw mill attached; both ordinary. Value not exceeding \$1,800.

On ditto: Grist mill, in ruins; owned by John Whitby.

On ditto: Saw mill, very inferior; by H. Walker.

On St. George's: A carding and saw mill, owned by Jacob Vandegrift. Value about \$1,500.

## DOCUMENT 16.—No. 2.—Continued.

There may be other mills which we have omitted, but I cannot call to mind any others in this neighborhood. In the vicinity of Smyrna, there are a number, an account of which any of the gentlemen there will furnish you. Indeed, our peninsula is, as you no doubt are aware, studded with them at the head of nearly all the streams that empty into the two bays.

With much respect, your friend,

D. CORBIT.

JOSHUA GILPIN, Esq.

CANTWELL'S BRIDGE, March 6, 1832.

DEAR SIR: In reply to your communication of the 27th ult., that I would make out and transmit you a list of the manufactures and manufacturers in this neighborhood, and also on the waters of this creek, Sassafra, Bohemia, Blackbird, and St. George's, have to observe, that there are none to my knowledge other than flour or grist mills, on any of these waters; which, as near as I can ascertain, belong, or are occupied, as follows:

On Bohemia: at the head waters thereof, a grist mill, owned by Mrs. James A. Bayard.

On the Sassafra: only one mill, at the head, occupied by Wm. A. Miller.

On Blackbird: only one, occupied by Ira Lyons.

On St. George's: none, the canal having purchased out all the water rights.

On our creek, Appoquinimink, there are several: one, owned by John Ginn, near Newtown; one, owned by Samuel L. Eccles, at Noxtown; one, on Drawyer's, a branch of Appoquinimink, owned by the heirs of Samuel Thomas, deceased; one, on the same, owned by John Cannon.

These comprise all the mills on those waters that I know of, or, by inquiry, can ascertain. There are sites for factories, I have no doubt, on all of them; several I know on our creek, but for the want of capital and enterprise among our people, it is likely to be some time before they will be occupied in that way. Any further information you may want, which it is in my power to give, I will, at any time, cheerfully furnish.

Yours, very respectfully,

DANIEL CORBIT.

JOSHUA GILPIN, Esq.

March 25, 1832.

SIR: In answer to your notice, which I received on the 23d day of March, I have now set down to make out as correct a statement of the small concern which I am engaged in, as I can well come at.

1. We are situated at the head of Back Creek, in Cecil county, and State of Maryland.
2. We have a grist mill, saw mill, and clover mill, and all driven by water power.
3. It has been established as a grist mill upwards of one hundred years, the saw and clover mill about two years.
4. The capital invested in ground, buildings, and machinery, is about \$6,000.
5. Average amount for materials for the last year, ending 30th of September, 1831, and wages, \$700.

6. The article manufactured is principally corn and wheat, about nine or ten hundred bushels a year, of which we are entitled to the one-eighth. The sawing which is done perhaps would profit something like \$200 per annum. Clover seed which was got out, about 300 bushels; the one-eighth we get for our trouble, which amounts, in money, to about \$35.

7. We have employed, generally, two men and one boy. We also employ four head of horses and cattle. The grist mill, I should suppose, works about six hours in the day, the saw mill and clover mill each work about two months in the year, making four months the two.

I, above, have made out a statement of our concern, as near as I could come at it. As we do not keep a regular account of our business done, I had no true guide to go by; consequently, I had to come at it the best that I could.

It being a thing that I had never thought of having to give an account of, I expect that to you I made an awkward minute of it. However, perhaps it may answer for you to make out your statement by; and if so, I shall be much gratified.

With respect, I am yours, &c.

SAMUEL H. FREEMAN.

MR. JOSHUA GILPIN.

| Some mills about Smyrna and Kenton, not recollected. |   |   |   |   |   |   |   |         |

*Garrett & Pusey's Cotton Yarn Manufactory, Newcastle County, Delaware.*

## QUESTIONS.

1. State and county in which the manufactory is situated?
2. Kind or description of the manufactory; and whether water, steam, or other power?
3. When established; and whether a joint stock concern?
4. Capital invested in ground and buildings, and water power and machinery?
5. Average amount in materials, and in cash for the purchase of materials and payment of wages?
6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed?
7. Cause of the increase, (or decrease, as the case may be,) of profit?

## ANSWERS.

1. In the State of Delaware, Newcastle county, situated on the Brandywine, in the city of Wilmington.
2. Manufactures cotton yarns, No. 8 to 30; the water power is owned by the city, and used at night to pump the water for the use of the city.
3. Established, 1829, by two individuals, but owing to the depressed state of the business in that and the next year, they became embarrassed, and their effects were sold by the sheriff to pay their debts, but fell sadly short.
4. The mill and property cost twenty-eight thousand dollars; machinery valued at ten thousand dollars.
5. About six thousand dollars.
6. Those engaged in the establishment in 1829 and '30, must have sustained considerable loss, and, no doubt, would have been better out of business during that time; for the last year the business has met a fair profit, and, no doubt, much more than it will do for two years to come, should the duty be continued.
7. The cause of the increase in the profit was, no doubt, owing to the scarcity of goods in the market, and that scarcity was produced by the goods being lower than the manufacturers could afford to make.

| QUESTIONS.                                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                         | 8. We know but little about the business or profits of others, in this State or county, but presume there is nothing worse than farming, where they depend on slave labor.                                                                                                                                                                                                              |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                  | 9. We manufactured last year about 124,000 lbs. yarn, valued at \$30,000.                                                                                                                                                                                                                                                                                                               |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                        | 10. We used 400 bales of cotton, valued at about \$14,000; 250 gallons lamp oil, valued at \$212; twine, paper, &c. \$100.                                                                                                                                                                                                                                                              |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                        | 11. This I know but little about.                                                                                                                                                                                                                                                                                                                                                       |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                      | 12. We have in our employ nine men, twelve women, and thirty-one children.                                                                                                                                                                                                                                                                                                              |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                       | 13. The hands are employed about eleven and a half hours per day, the year round.                                                                                                                                                                                                                                                                                                       |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                       | 14. Of this I can give but very little account, but suppose the women could make quite as much with their needles; there is not much work to be had for children at any price, except in manufactories.                                                                                                                                                                                 |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                              | 16. Our sales are made in Philadelphia, twenty-eight miles distant; have water carriage about ten months in the year.                                                                                                                                                                                                                                                                   |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                             | 17. This I know nothing about.                                                                                                                                                                                                                                                                                                                                                          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                               | 18. In this country, the West Indies; and of late some have been sent to the East Indies, but whether they have paid expenses or not I cannot say.                                                                                                                                                                                                                                      |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                              | 19. Answered in 18th query.                                                                                                                                                                                                                                                                                                                                                             |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered for what?                                                                                                                                              | 20. Part is sold by us on credit; the rest by our agent, mostly on credit.                                                                                                                                                                                                                                                                                                              |
| 27. What amount of the agricultural products of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                          | 27. There are about 150 barrels flour, valued at \$750; fuel, \$300; sundries, meats, vegetables, &c., \$950.                                                                                                                                                                                                                                                                           |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                   | 28. I have not sufficient data by me to answer this question.                                                                                                                                                                                                                                                                                                                           |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. We think it would certainly cause us to abandon our business for a few years, but we think in three or four from the time the duty was reduced, those who could hold their works, might commence with safety, and make fifty per cent. more than the past year; for as soon as John Bull thought himself possessed of the market, the prices would nearly double what they now are. |

| QUESTIONS.                                                                                                                                                    | ANSWERS.                                                                                                                                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                | 30. We cannot yet certainly tell, but think likely that most of our capital would be sunk in the machinery, as that which cost thousands would be of little or no value. |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.? | 31. An answer to this will be found in our answer to the 29th query.                                                                                                     |

Those are all the queries that we can at this time answer, or that we think ought to be answered. Many questions that are put would not afford any facilities, if answered, we think, to come at a correct judgment respecting what would be best to be done.

Yours, respectfully,

GARRETT & PUSEY.

I have now been engaged in mercantile business for ten years past, and have been concerned in the manufacture of iron and nails for the last five years, and for the past year have had a concern in a cotton factory, and from the best information I have been able to get, I am firmly of the opinion, was the manufacturers of iron assured that the present duty would not be reduced, we should, in ten years from this time, have enough iron manufactured in this country to supply the demand, superior to the common English iron, for less per ton than we should get it from England or any other country, even though the duty is reduced to 12½ or even 10 per cent. Coarse cotton goods is at this time made here better and fifty per cent. less price, than they ever were before the duty was raised to what it now is; and I assuredly believe it will be the case with woollens, if the duty is continued, and our farmers encouraged in raising of sheep. Should the duty be reduced or taken off, to meet the views of those individuals who have made so much noise about the many being so enormously taxed for the benefit of the few, I have no doubt thousands will be ruined by it, and not one in fifty of those so anxious for it would be one cent the better off for it, but many of them would find, when too late, they were thousands out of pocket.

Respectfully yours,

THOS. GARRETT.

*Joseph Bancroft's Cotton Manufactory, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Delaware, Newcastle county.                                                    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Water power; for the manufacture of fine cotton goods.                         |
| 3. When established; and whether a joint stock concern?                                                                               | 3. Close of 1831.                                                                 |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. Water power, &c., \$25,000; machinery, \$17,000.                               |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Calculated to produce 150,000 yards cambric muslin.                            |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?       | 10. Say 40,000 lbs. of cotton, 200 gallons oil, 30 barrels flour, in the factory. |

DOCUMENT 16.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                       | 12. Seventeen men, at \$9 a week; twenty-five women, 3 to \$4 do.; twenty children, at \$1 75 do.                            |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                        | 13. Average eleven hours.                                                                                                    |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                        | 14. In other States nearly as above; in England, men, \$6 a week; women, 2 to \$2 50 do.; children, \$1 50 to \$1 75 do.     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                               | 16. To Philadelphia, New York, and Baltimore.                                                                                |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                              | 17. They do almost wholly, the manufacture being only a trial in this country, as yet.                                       |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                | 19. Occasionally, under some circumstances, a few might perhaps be sent to Mexico or South America.                          |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                              | 20. Generally on six months' credit.                                                                                         |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                              | 23. On yarns above 30 hanks per lb., increase the duty to 25 cents per lb., with an increased minimum for fine cotton goods. |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. I should be compelled to abandon the business.                                                                           |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. I should have none to employ, as my property must be sacrificed, and would probably not sell for half its cost to me.    |

ROCKFORD, *Third Month, 6th, 1832.*

RESPECTED FRIEND: Herewith I hand thee two statements, as nearly conformable to what I understand to be thy wish, as I am capable of essaying at this time; believing their general amounts will be not far from the truth.

With regard to my own establishment, it has been so recently started that I am unable to answer most of the queries propounded by the Secretary of the Treasury. I intend to manufacture cambric muslins, or other fine cotton goods; and have machinery calculated to employ about seventeen men, twenty-five women, and twenty-five children, who will work, on an average, about eleven hours a day.

Perhaps it will be best to state, that I expect it will produce near 3,000 yards of cambric muslin per week; which ought to sell for 18 to 20 cents per yard, including commission, and other expenses, and at six months' credit. It is not unlikely if they are made very light but that they may allow of exportation to Mexico occasionally.

Very respectfully, thy friend,

JOSEPH BANCROFT.

JOSHUA GILPIN.

P. S. I omitted to state that I shall have 1,760 spindles and 30 power looms.

|------------|---|---|---|---|---|--|----------------|

On examination of the accompanying statements it will be found that fine spinning is not near so profitable as coarse spinning. There is also a difficulty in the way of fine spinning here, arising from the want of suitable material for the strong yarns or twist for warps. The best New Orleans cottons alone are not so suitable for spinning twists from No. 40 upwards,

as many of the South American cottons, which are sold in Liverpool for nearly the same price; they are much stronger in the staple. The Sea Island cottons are finer than needful, and higher priced than such cottons as might be imported would come at, if there was call for them, by the introduction of this kind of spinning.

It will be observed, that the wages of men are fifty per cent higher here than in England; and their assistance is more needful in the fine than in coarse spinning, where children can do most of the work, in whose wages here and in England there is very little difference. The high price of machinery also operates very unfavorably on fine spinning, seeing the weight of yarn produced by any given number of spindles is so materially reduced, and this reduction is in the most expensive part of the work, viz. that on which men are employed. If it were not for the difficulty of properly weaving and finishing fine goods here, large quantities of fine yarn would be imported, as there is no difference in the duty on a pound of yarn of ten hanks and a pound of one hundred hanks to the pound, which ought not to be the case, considering the difference in the labor and expense required to produce the two yarns.

*A table showing the difference of protection afforded by the present tariff on coarse and fine yarns to American labor, as it ought to be kept in view that it is the labor of the country which is sought to be protected and encouraged.*

H. Clay, in his last speech in the Senate of the United States, remarks, that such machinery is used in this country as requires the attention of females only, and intimates that to be the case for the production of yarns for which the labor of men is required in England: this, however, is not the case, as the same kinds of yarns are not produced by them, or only in a very limited extent, and even these do not make as handsome goods; nor is there any prospect of such machinery being made to produce suitable yarn, of number finer than 45 or 50 hanks per pound.

| Number of yarn in hanks, per pound. | Weight spun for a stated price, by one man, on mules. | Price paid for spinning said weight. | Amount of duty, at 15 cts. per lb., on one man's weekly work and wages, with his help. |
|-------------------------------------|-------------------------------------------------------|--------------------------------------|----------------------------------------------------------------------------------------|
| 15                                  | 560 lbs.                                              | \$14 00                              | \$84 00                                                                                |
| 50                                  | 200                                                   | 14 00                                | 30 00                                                                                  |

| 70                                  | 112                                                   | 14 00                                | 16 80                                                                                  |
| 80                                  | 87                                                    | 14 00                                | 13 05                                                                                  |
| 90                                  | 74                                                    | 14 00                                | 11 10                                                                                  |
| 100                                 | 64                                                    | 14 00                                | 9 80                                                                                   |

The prices stated in this table are those paid for spinning filling; more is paid for spinning twist, and the amount produced is less. The No. 15's also is put down at the prices which must be paid for spinning it on mules, though it can be spun as well, and much cheaper, as such machinery as is alluded to by H. Clay.

*Breck & Swift's Cotton Manufactory, Delaware.*

| QUESTIONS.                                                                           | ANSWERS.                                         |

| QUESTIONS.                                                                                                                      | ANSWERS.                                                |
|---------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                 | 4. Capital invested in machinery, \$18,000.             |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                 | 5. Five hundred dollars per month.                      |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products? | 10. From eighteen to twenty hundred of cotton per week. |
| 12. Number of men, women, and children employed, and average wages of each class?                                               | 12. Sixty hands, average wages from 5 to \$6 per week.  |
| 13. How many hours a day employed; and what portion of the year?                                                                | 13. Twelve.                                             |
| 15. Number of horses, or other animals employed?                                                                                | 15. One horse.                                          |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                       | 16. Sent to Philadelphia.                               |

*J. B. Hutchinson's Cotton Manufactory, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. On Brandywine Creek, Newcastle county, State of Delaware.                                                                                                                         |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Cotton factory; water power.                                                                                                                                                      |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established in August last; have four partners.                                                                                                                                   |
| 4. Capital invested in ground and buildings, and water power and in machinery?                                                                                                                                                                                                                       | 4. Water power, buildings, and land is E. J. Dupont's; is worth forty thousand dollars. Including some new machinery, now ready, and which is running, cost thirty thousand dollars. |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Ten thousand dollars.                                                                                                                                                             |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. We have not been in operation one year, but at the end of the year, if average six per cent. clear, it is more than we expect. Not a dollar borrowed.                             |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                               | 7. In a great measure it is the want of confidence in the Government to protect domestic industry.                                                                                   |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Our neighbors are not very willing to give us much information on that head.                                                                                                      |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 175,000 lbs. cotton yarn, No. 10 to 15. No. 15 is worth 25 cents per lb.                                                                                                          |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                                                            | 10. 197,000 lbs. cotton, worth from 10 to 13 cents per lb.                                                                                                    |
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                                                           | 12. Fifteen men, average \$6 30 per week; eighteen women, at \$2 12½ per week; forty-eight boys and girls, at \$1 43 per week.                                |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Twelve hours a day all the year, except fourth of July and Christmas.                                                                                     |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Two horses.                                                                                                                                               |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                                                                                                  | 16. To Philadelphia, 31 miles from the factory.                                                                                                               |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. In the United States and South America.                                                                                                                   |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. Coarse cottons made from such yarn, to the East Indies, South America, &c.                                                                                |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Generally on a credit of from 60 days to four and six months, owing to the demand.                                                                        |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. See query nine.                                                                                                                                           |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The present rate will guarantee it, but no less duty will.                                                                                                |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. See query six.                                                                                                                                            |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. Cotton costs from 10 to 13 cts.; waste and loss in manufacturing, two cents per lb; wages 8 to 9 cents per lb. Yarn No. 15 is worth 25 cents.             |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. Oil, leather, stone coal, lamps, iron, lumber, &c. &c. from 1,500 to \$2,000.                                                                             |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                    | 29. We should have to abandon it.                                                                                                                             |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                             | 30. Our capital is all employed in the machinery, and if we have to abandon it our machinery is worth nothing: therefore, we would have no capital to employ. |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                              | 31. I should have to turn politician, and look to Government for an office.                                                                                   |

DOCUMENT 16.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                                                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 33. Amount of capital, and what proportion the borrowed capital bears to that which is real?                                                                                                                     | 33. See queries No. 3 and 4.                                                                                                                                                                                                                                        |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent., and how gradual should the reduction be?                                        | 34. The present rate of duty will not do more; for the last three years it will not yield six per cent.                                                                                                                                                             |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 35. If minimums should be abolished I should say there was no duty, for the market fluctuates so much, and when depressed the British agents would take advantage of it, and have them assessed at depressed prices; then there would be no safety in our business. |
| 37. Proportion which the production by the American manufacturers bear to the consumption?                                                                                                                       | 37. It exceeds the consumption.                                                                                                                                                                                                                                     |

BRANDYWINE, April 2, 1832.

J. B. HUTCHINSON &amp; CO.

ROSEVILLE, March 3, 1832.

DEAR SIR: I have endeavored to collect, as well as I was able, the information you require in yours of the 26th ult.

There are, in my neighborhood, five cotton factories, viz. one at Roseville, one on Pike creek, two in Staunton, and one on Red Clay creek: together, with a capital of \$114,000, 188 hands constantly employed, and 407 dependant, and consume 575,000 lbs. cotton annually, with 7,650 spindles.

There are, as near as I can judge, 104 males, and 84 females. The wages of the males will average \$4 per week, the females \$1 75.

I think this is as much as any committee ought to have; it is, at any rate, quite as much as I am willing to give.

Very respectfully,

Your obedient servant,

HARRY CONNELLY.

JOSHUA GILPIN, Esq.

ROSEVILLE FACTORY, March 31, 1832.

DEAR SIR: I must apologise for not having answered your last letter before this, but I anticipated the pleasure of seeing you, in which I have been disappointed. I will endeavor, however, to give you the information you request. There is invested in the factory at Roseville \$75,000; 3,850 spindles, and consume 230,000 lbs. per annum; 90 hands employed, and 165 dependant, wages \$11,700 per annum; the sales of yarn amount to \$58,500 per annum.

At Endecon, on Red Clay creek, \$16,000 capital; 1,400 spindles, consume 115,000 lbs. cotton; 40 hands, 84 dependant, wages \$4,160 per annum; sales \$22,800.

Pike Creek Factory \$10,000 capital; 1,200 spindles, consume 11,500 lbs. cotton; 22 hands and 50 dependant, wages \$4,160; sales \$22,800.

Eagle Factory, at Staunton, \$13,000 capital; 1,200 spindles, consume 115,000 lbs. cotton; 36 hands and 108 dependant, wages \$4,160; sales \$22,900.

Very respectfully,

Your obedient servant,

HARRY CONNELLY.

JOSHUA GILPIN, Esq.

*William Hilton & Son's Manufactory.*

We manufactured 68,200 yds. of Rouen cassimere, sold on an average for 16 cts., \$10,902.  
 135,000 lbs. cotton yarn, at 30 cents per lb., \$40,500.  
 Number of spindles 3,892; cost \$11 per spindle, including repairing machinery, \$42,812.  
 Twenty-eight power looms, at \$110, \$3,080.  
 Capital employed, \$10,000; real estate \$20,000.  
 The amount of cotton consumed 150,000 lbs., at 12½ cents, \$20,625.  
 Wool, for Rouen cassimere, 3,200 lbs., at \$1 16, \$3,712.  
 The number of hands 152; cost, \$13,152 25.  
 Ten per cent. loss on the manufacture of the above cotton and wool, \$2,433 70.  
 Commission on Rouen cassimere, \$1,090 20.  
 Thirty men, sixty-three young women, sixty-seven children under 18 years.

*Jacob Pusey's Cotton Manufactory, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. State of Delaware, Newcastle county.                                                                                                                                                                                                                                                                                                         |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Spinning cotton; 1,400 spindles; water power.                                                                                                                                                                                                                                                                                                |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. 1814; private property.                                                                                                                                                                                                                                                                                                                      |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                                                          | 4. Thirty thousand dollars.                                                                                                                                                                                                                                                                                                                     |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. When in full operation, about ten thousand dollars must be afloat in materials and manufactures on hand, and provisions for payment of wages.                                                                                                                                                                                                |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. The first seven years sunk all the capital, and the last ten years have recovered about two-thirds of it, though some of the last ten were years of loss. My books do not distinguish between the two kinds of capital.                                                                                                                      |
| 7. Cause of the increase (or decrease, as the case may be) of profit?                                                                                                                                                                                                                                | 7. Frequently by domestic competition the profits are reduced to cost and charges, and sometimes loss. Sometimes by over-importations of other descriptions of goods, such a press for money is felt in sea-ports as to put down the price of yarn, when the stock on hand was not greater than ordinary, and vice versa for increased profits. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Not known to the writer.                                                                                                                                                                                                                                                                                                                     |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. From 70,000 lbs. to 100,000 lbs. cotton yarn per annum, the quantity varying according to demand, in some measure. It is difficult to ascertain the value per annum as the price has varied from 64 cents per lb. in 1814, to 18 or 20 cents in 1830 and '31.                                                                                |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. Three hundred and fifty bales cotton valued for 1831 at \$10,500; all the product of the United States.                                                                                                                                                                                                                                     |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Very little, if any, cotton yarn is imported as coarse as that spun at this factory.                                                                                                                                                                                                                                                        |

## DOCUMENT 16.—No. 2.—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                               |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12. Number of men, women and children employed, and average wages of each class?                                                                                                                                                                                                                                                           | 12. Six men; average \$6 each per week.<br>Twelve women; do 2 do.<br>Twenty-five children; do 1 25 do.                                                                                                                                                 |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Eleven hours, exclusive of meals, and about fifty weeks in the year.                                                                                                                                                                               |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                                                           | 14. Not known to me.                                                                                                                                                                                                                                   |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Seven.                                                                                                                                                                                                                                             |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. A small portion sold at the factory; the remainder sent forty miles by land and water conveyance.                                                                                                                                                  |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                                 | 17. No foreign article is imported of like kind of latter years; home competition has settled that in a reduced price.                                                                                                                                 |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. In Pennsylvania, Delaware, and the southern and western States.                                                                                                                                                                                    |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. None of this kind exported until woven.                                                                                                                                                                                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. Much the largest portion is sold on a credit, generally of six months, after having been in store sometimes three or four months.                                                                                                                  |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or labor, and at what rate?                                                                                     | 21. The cost decreased since 1814, both in material and labor; most in material, as labor has been rather higher since 1824; material has fluctuated, having been sold some years at 10 to 15 cents per lb., and other years at 25 to 30 cents per lb. |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. In 1814, 64 cents per lb.; gradually declining, it was in 1820, 28 cents; then advancing in 1822, was 34 or 35 cents, and declining till 1830 and '31, was 18 cents, except excited prices a few months in 1825.                                   |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. Not known.                                                                                                                                                                                                                                         |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Less than four per cent. clear of provision for proportionable repairs.                                                                                                                                                                            |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                               | 26. About one half for raw material, one-fourth for labor in the factory, one-twentieth, or sometimes one-fifteenth, might be profit; the balance is made up by contingent expenses, wastage, &c. &c.                                                  |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. \$2,000 of breadstuffs, meats, and vegetables; \$1,000 domestic dry goods and groceries.                                                                                                                                                           |

| QUESTIONS.                                                                                                                                                                                                                                                             | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                   | 28. No data <sup>as</sup> respects United States; upwards of 20,000 pounds of cotton yarn are produced in this county in one week: no other county in this State manufactures cotton.                                                                                                                                                                                                                                                                                                    |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. There can be no question but a present abandonment of business would ensue, as manufacturing at reduced prices would destroy the capital soon. All who could hold their property in an idle state a few years, would then do an excellent business under such prices both for material and manufactured goods, as British monopoly would then dictate, taken in connexion with the then low prices for bread and meat, caused by labor transferred from manufactures to agriculture. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                         | 30. Under such circumstances, I should have no capital, purchasers for such property would not appear at any price; but admitting a very small amount could be realized, agriculture or merchandizing must be entered into in order to get bread.                                                                                                                                                                                                                                        |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                          | 31. It is believed total ruin would follow: and twenty-five cents per day for my manual labor would be better than nothing. Under such a duty, agriculture would soon be good for nothing, to a man wanting experience; as is the case with manufacturers generally.                                                                                                                                                                                                                     |

March 10, 1832.

JACOB PUSEY.

*Charles J. Dupont's Woollen Manufactory, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                          | ANSWERS.                                |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                           | 1. State of Delaware, Newcastle county. |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                | 2. Woollen; water power.                |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                             | 3. In 1811; not a joint stock concern.  |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                                                         | 4. Fifty thousand dollars.              |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                     | 5. Thirty thousand dollars.             |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. No profit.                           |

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                     | 7. Annual reduction in the manufactured articles, caused by over-trading of English manufacturers, frauds on the revenue, and the facility afforded by the Government by allowing credits on the duties.                                                                                                                                                                                 |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                             | 8. Supposed to exceed six per cent., as the banks loan their capitals at that rate of interest to merchants, agriculturists, and others.                                                                                                                                                                                                                                                 |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                      | 9. \$52,000; broadcloths, kerseys and satinetts; quality and value vary yearly.                                                                                                                                                                                                                                                                                                          |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                            | 10. 60,000 lbs. of wool, 2,500 lbs. of indigo, 1,500 lbs. of glue, madder, alum, copperas and chemicals, dyewoods, &c.; value in American products over 80 per cent. on the amount manufactured.                                                                                                                                                                                         |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                            | 11. Foreign articles are reduced in value when they find a similar article of American manufacture to compete with it in the market; cloths of the description manufactured here have fallen considerably, whilst superfine cloths are sold for nearly the same they did ten years ago; flannels being extensively manufactured in the United States, have fallen more than 50 per cent. |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                          | 12. Sixty persons; men \$20 per month, women \$8, and children \$6.                                                                                                                                                                                                                                                                                                                      |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                           | 13. Twelve hours per day throughout the year.                                                                                                                                                                                                                                                                                                                                            |
| 14. Rate of wages of similar classes otherwise employed in the same State and county; in other States, and in foreign countries?                                                                                                                           | 14. Supposed to be equal to those employed at factories. In England the persons receive a portion of their support from the poor rates; men's wages said to be 50 per cent. less; the wages of women and children nearly equal the amount paid here, as there is greater diversity of employment for them.                                                                               |
| 15. Number of horses, or other animals employed?                                                                                                                                                                                                           | 15. Three horses.                                                                                                                                                                                                                                                                                                                                                                        |
| 16. Whether the manufactures find a market at the manufactory? if not, how far they are sent to a market?                                                                                                                                                  | 16. In Philadelphia and Baltimore, thence to the south and west.                                                                                                                                                                                                                                                                                                                         |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                 | 17. Foreign articles do enter into competition.                                                                                                                                                                                                                                                                                                                                          |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. In the United States.                                                                                                                                                                                                                                                                                                                                                                |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                   | 19. Are not exported.                                                                                                                                                                                                                                                                                                                                                                    |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                     | 20. Sold at six and eight months' credit; are usually four months in the hands of agents: the returns are seldom received under twelve months.                                                                                                                                                                                                                                           |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. The cost of manufactured articles has diminished considerably by the introduction of improved machinery the last four years: the price of the raw material has varied yearly.                                                                                                                                                                                                        |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                        | ANSWERS.                                                                                                                                                                                                                                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>22. The prices at which the manufactures have been sold by the manufacturer since the establishment?</p>                                                                                                                                                                                                                                       | <p>22. Cannot answer; articles vary in every color and quality; it would be impossible to estimate exactly the relative value of cloths made since the commencement of the establishment: the description of woollens manufactured in the United States have fallen 50 per cent. since the tariff of 1816.</p>                     |
| <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p>                                                                                                                                                                                                 | <p>23. The present duties are thought to be sufficient if properly enforced.</p>                                                                                                                                                                                                                                                   |
| <p>24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?</p>                                                                                                                                                                                                                                           | <p>24. Think if the duties were paid in cash, before the goods leave the custom-house, it would check over-trading.</p>                                                                                                                                                                                                            |
| <p>25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p> | <p>25. See answer to question six.</p>                                                                                                                                                                                                                                                                                             |
| <p>26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p>                                                                                                                                                               | <p>26. The price of the raw material is generally considered one-half of the value produced, one quarter is paid in wages, one-quarter in interest on capital employed, cost of coloring, commissions and guarantee on sales, insurance, fuel, light, and wear and tear of machinery.</p>                                          |
| <p>27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                                                                                                           | <p>27. Above 80 per cent. on the value.</p>                                                                                                                                                                                                                                                                                        |
| <p>28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?</p>                                                                                                                                                                                                       | <p>28. See report on wool and woollens of the New York Convention, which is supposed to be a moderate estimate of the capital employed.</p>                                                                                                                                                                                        |
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p>                                                                    | <p>29. The woollen manufacture would cease to be pursued in the United States; the property thus vested in buildings, machinery, and water power, would pass into other hands at an immense sacrifice, and the consumers of woollen goods be at the mercy of English agents, who would have the entire control of the markets.</p> |
| <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                                                                                                                                             | <p>30. Our capital being invested in water power and fixtures, would be totally lost if forced to abandon the business.</p>                                                                                                                                                                                                        |
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?</p>                                                                                                                                                                              | <p>31. Having no disposable capital left, would not seek other pursuits.</p>                                                                                                                                                                                                                                                       |
| <p>32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?</p>                                                                                                                                                | <p>32. Cannot answer.</p>                                                                                                                                                                                                                                                                                                          |

## DOCUMENT 16.—No. 2.—Continued.

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                                                                                                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 33. Amount of capital, and what proportion the borrowed capital bears to that which is real?                                                                                                                     | 33. See questions four and five; think it not relevant, the capital might be all borrowed, and should be entitled to the same protection whether owned by the persons engaged at the factory or not. |
| 34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of six per cent; and how gradual should the reduction be?                                       | 34. Cannot say; capital invested in the woollen business, with the present evasion of the tariff, does not yield six per cent.                                                                       |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 35. The minimums are evaded; do not know to what extent.                                                                                                                                             |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                              | 36. Cannot answer.                                                                                                                                                                                   |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                      | 37. Suppose the American production of manufactured articles of all kinds to be triple the amount imported.                                                                                          |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                 | 38. Uninformed on the subject.                                                                                                                                                                       |
| 39. Average profit of money or capital in the United States?                                                                                                                                                     | 39. Cannot answer.                                                                                                                                                                                   |
| 40. Average rate of wages?                                                                                                                                                                                       | 40. Uninformed on the subject.                                                                                                                                                                       |

PHILADELPHIA, April 18, 1832.

DEAR SIR: Being much engaged this spring, I had neglected answering your letters until this late date; my business being extremely onerous, must plead my excuse for not earlier attention, at least, to your letters. As it regarded the queries propounded by the Government, I had almost concluded to have passed them by unnoticed, as I could not but feel the improper, nay, almost indelicate tendency of many of them; and I believe that nothing but my highest respect for yourself could ever have induced me to alter my determination. Having two distinct, I might say three interests, they, necessarily, are blended with each other, and there is much difficulty to identify them separately with exactness, but in the aggregate will endeavor to approximate accuracy.

The Rockland estate embraces a considerable tract of land, including two or three farms, altogether, say about 500 acres of land; the principal part of their machinery has also been made on the spot. The amount of capital, from these circumstances, is necessarily enhanced a considerable sum over and above what might be deemed absolutely necessary for conducting the operations of the different branches. The capital invested was computed by the late Mr. Young, above \$130,000. The number of persons supported, directly and indirectly, including all ages, was the last census (taken by ourselves) at 278 souls, all told, and all of whom derive their main support from this property.

Of later years, having turned our attention more to the cotton manufacture, we have not driven on our woollen concern with that force and attention as formerly, the uncertainty of the business, (owing to the vacillating policy which continually threatened us,) held no inducement to those actuated by prudent motives, to extend their concerns. The amount of woollen goods now manufactured does not exceed \$30,000 per annum; this year it will not reach \$25,000; but this amount necessarily fluctuates as we bend our attention to a coarse or a fine fabric, as the case may be; but our machinery, buildings, power, &c., is fully capable, under certain encouragement, to manufacture double that amount.

In the cotton spinning mill, we have above 3,000 spindles, and employ 28 males and 38 females; when engaged in spinning such numbers of yarn as are suitable for the general market, the produce, per annum, would be about 150,000 pounds of yarn; but as we are calculated for a much finer article, principally about No. 40, the amount produced is about one-half the above sum, value about \$30,000, varying less or more as we spin finer or coarser. The average wages of males employed, is from \$1 50 to \$10 per week; of females, from 50 cents to \$4 50 per week; those persons receiving the highest wages occupy situations involving a certain degree of responsibility. In addition to our spinning mill, we have a weaving establishment for fine fabrics, principally the cambric muslins. This department, however, is only in its incipient state, having about thirty looms; the weavers, which are all females, earn about \$12 50 to \$18 per month, and the males (three in number) who attend to the preparatory operations, from \$4 50 to \$8 per week. As it is our intention (unless prevented by some untoward circumstances) to consume the entire product of the spindles, it is evident a comparatively small additional capital in machinery would be required to produce nearly double the annual result; and here I would remark, that this manufacture is the extreme line of protection under the present law, as there is no encouragement at present held out, for proceeding further and finer. Such, in fact, is the situation, that a small reduction from present duties would inevitably compel us to retrace our steps and recede upon our neighbors; whereas, should an increase of minimums in cotton take place, there would be a wide field for an extensive and new capital, and the price of the finer fabric would eventually fall, *pari passu*, with what we have witnessed in the coarser manufacture.

I speak understandingly, and wish to be understood literally: we have taken the inmates from the poor-house, and caused them to support themselves, and become respectable members of society. We have taken those who were broken down with sickness, had been dismissed by their former masters before the expiration of their apprenticeship, and made a burden to their parents; placed them in our establishment, enabled them first to support themselves, then a small family, and, in one instance, they have left more than \$1,000 at their decease. I would, likewise, beg leave to call your attention to another, and by no means an unimportant benefit conferred on the public. The property where our establishment is now located paid, when Henry Price was collector, 7s. 6d. currency, as the whole amount of taxes for the year: last season the amount of taxes paid by this property, and its inhabitants, was about \$400; and yet we are called the oppressors of the poor, the burden of the nation. I cannot but feel indignant and warm upon the subject, and hope you will excuse the excitement. I have thus endeavored to give you a small sketch of our establishment, and hope it may be found satisfactory.

Respectfully,

W. W. YOUNG.

JOSEPH GILPIN, Esq.

ANDOVER, Third Month 13, 1832.

RESPECTED FRIEND: To-day I went again to Delaware, and luckily found Alexander Murphy at home, from whom I obtained the statement upon the other side of this letter. Although it may not be precisely correct, yet I think it approximates pretty closely to it, and may answer thy purpose. It embraces all of the woollen concern in Kent county. Murphy says there are no manufactures of cotton whatever, that he knows of, nor do I know of any other operations carried on, that will fall within the scope of thy inquiries.

We have obtained the passage of a law from our Legislature, to construct a railroad from the head waters of the Chester to some suitable point on the Duck Creek, but did not get it through in time for the action of Delaware, this session. However, we shall be ready for the next; when, no doubt, the grant will be confirmed. Our object is to communicate directly with either New York or Philadelphia, but more particularly with the former city, where the leading articles of our production always finds a superior market. For several years past, the difference has more than covered the charge of freight; this track opened, we should have the free choice of three of the first cities in the Union for our trade, an object to us of incalculable advantage. The whole distance of the track cannot exceed sixteen miles in extent; and this, too, over a country already levelled by nature for the purpose, scarcely requiring the aid of an engineer; no railroad can be made at a cheaper rate than this, and, when looking at the whole ground, I am persuaded none will be more profitable; the lower Chesapeake can ascend to the east end of our rail as easily as it can go to Baltimore, and when there, will find a better price than Baltimore can give for grain and breadstuffs; even charge a tollage equal to the Ohio road, and there can be no parallel in cost between the two structures. All we want is, to be fully appreciated, and I should be much pleased if thy able pen could be engaged to aid our cause, by letting the public understand our project.

## DOCUMENT 16.—No. 2—Continued.

## WOOLLEN CONCERN.

*Alexander Murphy.*

Establishment, including water power, \$4,500; machinery employed, \$1,600; floating capital, \$300.

Manufactures kerseys and cassinets, 2,000 yards; fulfs for the country, annually, 3,000 yards; employs eight persons.

*Richard Holding.*

Establishment, including water power, \$3,500; machinery employed, \$1,600.

Manufactures of kerseys and cassinets, 1,500 yards; fulfs for the country, annually, 2,500 yards; floating capital, \$250; employs six hands.

*Ezekiel Cowgill.*

Carding machines, \$500; water power, \$150.

Cards 6,000 lbs. of wool, at seven cents per lb.

*Charles Steadham.*

About the same business as E. Cowgill, in everything.

Kerseys are worth 87½ cents per yard, and cassinets about 62½ cents per yard.

With my best respects to thyself and family,

Very truly, thy friend,

JOHN TURNER.

JOSHUA GILPIN, Esq.

LAUREN'S, May 1, 1832.

DEAR SIR: I have the pleasure to annex the following estimate of the value and productions of Mr. Sacristy's establishment:

Value of mill seat and buildings, \$7,000; do. of machinery, \$5,000; consumes 12,000 lbs. of wool, value about \$6,000; employs twelve hands, average wages, per annum, \$2,000; for dyeing drugs, oil, glue, &c. &c., about \$1,000; for cotton yarn for chain for satinets, \$800; manufactures 20,000 yards satinets, value net, \$10,000.

I have not been able to ascertain any facts as relates to Johnson, Clark, or Dougherty, but this; you can estimate them in your report at about half of the above exhibit.

I regret that, owing to my absence in Philadelphia, and the many engagements I have had to attend to, I could not fulfil my promise to you sooner.

I remain, with great respect,

Your obedient servant,

CHARLES J. DUPONT.

*William D. Waples's Iron Furnace, Sussex County, Delaware.*

| QUESTIONS.                                                                                      | ANSWERS.                                                                       |
|-------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                       | 1. Sussex county and State of Delaware.                                        |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?            | 2. Blast furnace, for converting bog ore into pigs and castings; water power.  |
| 3. When established; and whether a joint stock concern?                                         | 3. In the year 1817; an individual concern.                                    |
| 4. Capital invested in ground and buildings, and water power and machinery?                     | 4. Fifteen thousand dollars.                                                   |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages? | 5. Twenty-four thousand dollars per annum, for an eight or nine months' blast. |

## DOCUMENT 16.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. The profits are derived from paying a part of the wages and raw materials in merchandise instead of cash; were it exclusively a cash business, it would be a losing concern; the profits were formerly greater than at present.  |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. Domestic competition.                                                                                                                                                                                                            |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. The employment of capital is very limited in this section of the State, and the profits on small are consequently greater than on large capitals; small capitals in active business, will probably yield from 10 to 15 per cent. |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. 600 tons of iron; 300 tons pigs, worth 30 to \$35; 250 tons castings, worth 50 to \$60; 50 tons scraps, worth 15 to \$18; a few years since pigs were brisk at \$40, and castings at 70 to \$80.                                 |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 180,000 bush. charcoal, 5 cts \$9,000; 2,000 tons bog ore, at \$3 75, 7,500; 7,000 bushels oyster shells, \$500; hands' wages, \$7,000; \$24,000—all domestic.                                                                  |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. I cannot answer.                                                                                                                                                                                                                |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. 20 moulders, keepers, &c., \$5,000; 12 other furnace men, at \$20, \$2,000; \$7,000; 40 other hands whose wages are included in cost of ore and coal.                                                                           |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. 24 hours per day, with a double set of hands; eight or nine months per annum.                                                                                                                                                   |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. Five to seven dollars and board and washing, for farming and other employments in this county.                                                                                                                                  |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. 28 to 32 horses.                                                                                                                                                                                                                |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                                                            | 16. Sent to the cities for a market.                                                                                                                                                                                                |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                           | 17. I believe not to any great extent.                                                                                                                                                                                              |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Norfolk, Baltimore, Philadelphia, New York, Boston, Portland, and from there into every part of the interior county.                                                                                                            |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. I believe not to any extent.                                                                                                                                                                                                    |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                                                               | 20. Generally sold on a 12 months' credit to be paid in cash.                                                                                                                                                                       |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the material or the labor, and at what rate?                                            | 21. The cost of the manufacture has not decreased to any extent, while the prices have declined very considerably, say 25 per cent. within 10 years.                                                                                |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                               | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                     | 22. Answered in ninth query.                                                                                                                                                                                                                                                                                                                                                                      |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                               | 23. The duty ought to be such as to secure the market to the manufacturer; competition will reduce the prices as low as the foreign article of the same quality; it is not of so much consequence what the price is as that it should be steady; the manufacturer can conform to any price if there is a demand.<br>24. It has been so stated, but I am unable to speak advisedly on the subject. |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                         | 25. The profits, as before stated, are derived from the sale of merchandise for wages, &c., and are not large; perhaps from six to ten per cent. according to the demand for iron, on the whole capital actively employed.                                                                                                                                                                        |
| 25. What has been the rate of your profits annually for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 26. Raw materials 19 per cent., wages of labor 75 per cent., profit 6 per cent.                                                                                                                                                                                                                                                                                                                   |
| 26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?                                                                                                                                                             | 27. Agricultural productions, \$5,000; domestic do., \$10,000; cash, \$9,000; \$24,000.                                                                                                                                                                                                                                                                                                           |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                         | 28. I cannot say as to the United States: this is the only blast furnace in the State.                                                                                                                                                                                                                                                                                                            |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                     | 29. I really think the business must be abandoned in consequence of the ruinous fluctuations which would take place in the prices, and the want of a steady demand; the business is a heavy one, and can only be maintained by a constant demand.                                                                                                                                                 |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                                                                  | 30. Probably in agriculture, which is already overstocked; the class of consumers ought to be increased instead of diminished.                                                                                                                                                                                                                                                                    |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                                                                                           | 31. Perhaps not; for if manufactures must be crushed, agriculture and commerce must languish in the same proportion.                                                                                                                                                                                                                                                                              |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                                                                                            | 32. Forges on a small scale for making 25 to 30 tons of bar iron per year, and salt works on the sea coast, are probably in some degree remote from competition, but those concerns are too trifling, compared with the mass of the manufacturing interest, to make much of an exception.                                                                                                         |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                                                                                              | 33. Answered.                                                                                                                                                                                                                                                                                                                                                                                     |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                                                                                             | 34. I think a reduction of duties would not reduce the price, upon an average; it                                                                                                                                                                                                                                                                                                                 |

## DOCUMENT 16.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| played to yield an interest of six per cent., and how gradual the reduction should be?                                                                                                                           | would sometimes be lower and then higher, until the fluctuation would throw out the American manufacturer, and then prices would be uniformly higher. I consider it absurd to think of supplying ourselves with iron from abroad. We have the raw material sufficient to supply the world, totally useless naturally, and water power, enterprise, and skill to supply every demand that can be made upon us. |
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | 35. I cannot answer.                                                                                                                                                                                                                                                                                                                                                                                          |
| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                                                                                                              | 36. I cannot answer.                                                                                                                                                                                                                                                                                                                                                                                          |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                      | 37. This question is ably answered by others, and were I to answer it, I should merely quote from them.                                                                                                                                                                                                                                                                                                       |
| 38. Extent of individual or household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                  | 38. I cannot answer.                                                                                                                                                                                                                                                                                                                                                                                          |
| 39. Average profit of money or capital in the United States?                                                                                                                                                     | 39. I cannot answer.                                                                                                                                                                                                                                                                                                                                                                                          |
| 40. Average rate of wages?                                                                                                                                                                                       | 40. I cannot answer.                                                                                                                                                                                                                                                                                                                                                                                          |

Very respectfully, yours, &amp;c.

WM. D. WAPLES.

*Jonathan Bonny & Co.'s Iron Foundry, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                                                                                                                                                                                                  |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. Wilmington, Newcastle county, Delaware.                                                                                                                                                                                                |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Iron foundry, with steam power.                                                                                                                                                                                                        |
| 3. When established; and whether a joint stock concern?                                                                               | 3. January, 1831.                                                                                                                                                                                                                         |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. About \$20,000; iron castings, average price about five cents per pound.                                                                                                                                                               |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?       | 10. 175 tons American pig iron, worth from 35 to \$40 per ton; from 20 to 40 tons Scotch pig, worth from 43 to \$48 per ton; about 50 tons old castings, worth from 15 to \$22 per ton; 200 tons Lehigh coal, worth about \$6 65 per ton. |
| 12. Number of men, women, and children employed; and average wages of each class?                                                     | 12. Fifteen men and boys; wages average about \$6 per week each.                                                                                                                                                                          |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. Employment all the year; work about ten hours per day.                                                                                                                                                                                |

| QUESTIONS.                                                                           | ANSWERS.                                                                                            |
|--------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| 1. Kind of manufacture?                                                              | 1. Iron foundry.                                                                                    |
| 2. Value of real estate, buildings and fixtures, occupied and used for the business? | 2. Eight thousand dollars.                                                                          |
| 3. Value of machinery, tools and apparatus, other than the fixtures?                 | 3. About five hundred dollars.                                                                      |
| 4. Average value of stock on hand and in the process of manufacture?                 | 4. Two thousand dollars.                                                                            |
| 5. Kinds and quality of articles manufactured?                                       | 5. Iron castings of every description.                                                              |
| 6. Value of articles manufactured?                                                   | 6. Average price about 5 cents per lb.                                                              |
| 7. Quantity of foreign materials used per annum?                                     | 7. Forty tons Scotch pig iron.                                                                      |
| 8. Value of foreign materials used per annum?                                        | 8. From \$43 to \$48 per ton.                                                                       |
| 9. Quantity of domestic materials used per annum?                                    | 9. 175 tons pig iron, and 50 tons scrap iron; 200 tons Lehigh coal.                                 |
| 10. Value of domestic materials used per annum?                                      | 10. Pig iron from \$35 to \$40 per ton, scrap from \$15 to \$22 per ton; coal worth \$5 65 per ton. |
| 11. Number of men employed?                                                          | 11. Fifteen.                                                                                        |
| 12. Whole number of persons subsisted, deriving direct support from the manufacture? | 12. From sixty to eighty.                                                                           |

*Mahlon Betts' Iron Foundry, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                      | ANSWERS.                                                                                                                                                                    |
|---------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                       | 1. Wilmington, Delaware; Mahlon Betts, proprietor.                                                                                                                          |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                            | 2. Iron foundry; steam engine, three horse power.                                                                                                                           |
| 3. When established; and whether a joint stock concern?                                                                         | 3. Established about 1812 or 1813; a private concern; has been in the hands of the present proprietor since 1822.                                                           |
| 4. Capital invested in ground and buildings, and steam power and in machinery?                                                  | 4. Capital invested about \$7,850.                                                                                                                                          |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                 | 5. Eight thousand dollars.                                                                                                                                                  |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                          | 7. A considerable increase, occasioned by general prosperity of the manufacturing establishment located in the neighborhood.                                                |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products? | 10. Consume about 10,000 bushels coal, at 20 cents per bushel, and 250 tons of iron, about one-third of the latter imported from England; average price about \$35 per ton. |
| 12. Number of men, women, and children, employed, and average wages of each class?                                              | 12. Employ about 18 men.                                                                                                                                                    |
| 13. How many hours a day employed, and what portion of the year?                                                                | 13. About ten hours per day.                                                                                                                                                |

## DOCUMENT 16.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                  | 16. Work made to order.                                                                                                  |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                 | 17. Very little foreign competition except railroad work.                                                                |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. In the neighborhood.                                                                                                 |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                     | 20. Nearly all sold on credit at from six to twelve months.                                                              |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. The cost of manufacturing has been lessened by a fall in price of the materials used, and expense in the operations. |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. The price of small castings has fallen from 9 to 5 cents, and large from 6 to 4½ per pound.                          |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                 | 23. No similar articles imported.                                                                                        |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                             | 30. Live on it until it is gone, then get an office in the Government; can't farm.                                       |
| 32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?                                                                | 32. Railroads and canals will soon reach the most remote point in our country at which those articles are wanted.        |

*Allen Wood's Rolling Mill, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                 |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. State of Delaware, Newcastle county.                                                  |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Rolling mill for iron and steel, by water power.                                      |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In August, 1826; not a joint stock concern.                                           |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                                                                                                                                                                                      | 4. Eight thousand dollars.                                                               |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Seven thousand dollars.                                                               |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Twenty per cent. on the whole amount capital invested per annum; no borrowed capital. |

## DOCUMENT 16.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                    | 7. Rather a decrease of profit since the concern was established, the cause of which is competition at home.                                                                                                                                                                                                                                                                                                                                       |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                             | 8. Twenty per cent. profit on \$4,000 capital employed in the stove business, in Wilmington, Delaware.                                                                                                                                                                                                                                                                                                                                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                      | 9. 40 tons sheet iron, at \$150 per ton, \$6,000; 750 doz. shovels and spades, average at \$6, \$4,500; 150 steel hoes, at \$3, \$450; 110 tons of steel, rolled for mill, cross-cut, pit, and other saws, shovels and spades, &c., \$35 per ton, \$3,850; 23 tons iron rolled for shovels and spades, at \$35 per ton, \$805; 4,500 lbs. gin saw steel, made at 12 cts. per lb., \$540; 3,000 lbs. cast steel, rolled at 4 cts., \$120, \$16,265. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                            | 10. 60 tons American bar iron, at \$90, \$5,400; 30 tons American steel, at \$120, \$3,600; 7,000 feet ash plank, at \$20, \$140; 150 tons anthracite coal, at \$6, \$900; 200 bushels Virginia coal, at 30 cts., \$60, \$8,900.                                                                                                                                                                                                                   |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                          | 12. Ten men, at \$1 per day.                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                           | 13. Twelve hours per day, for ten months in the year.                                                                                                                                                                                                                                                                                                                                                                                              |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                            | 15. Seven horses employed.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                  | 16. A very small quantity is sold at the manufactory; almost all sent to Philadelphia, from thence to other parts, say from 20 to 1,000 miles to market.                                                                                                                                                                                                                                                                                           |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                 | 17. Foreign articles do enter into competition at such places to considerable extent.                                                                                                                                                                                                                                                                                                                                                              |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. In the different States of the Union; at least one-half are consumed in the southern States.                                                                                                                                                                                                                                                                                                                                                   |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                  | 19. Not by the manufacturer: I think some are bought for exportation for South America.                                                                                                                                                                                                                                                                                                                                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                 | 20. Small sales for cash, but mostly at six months' credit.                                                                                                                                                                                                                                                                                                                                                                                        |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. But little variation in the cost of the articles manufactured since the concern was established; rather a decrease in the cost of materials; no decrease in the cost of labor.                                                                                                                                                                                                                                                                 |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. In 1826 sheet iron at \$170 per ton, and 1827, '28, and '29, \$170 to \$165 per ton; 1830, '31, and '32, \$160 to \$150 per ton; other articles, in about the same proportion, have fallen in price.                                                                                                                                                                                                                                           |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                 | 23. The present duty on sheet iron, with an additional duty of 20 per cent., would do; on the other articles manufactured there is sufficient.                                                                                                                                                                                                                                                                                                     |

## DOCUMENT 16.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                        | ANSWERS.                                                                                                                                                                                                                                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?</p>                                                                                                                                                                                                                                           | <p>24. A change is necessary to prevent John Sarchett, and others, from having chain cable iron cut into links, and brought in under the proper duty; chain cable iron is bolt bar iron in short or long pieces.</p>                                                                                                       |
| <p>25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p> | <p>25. From 15 to 20 per cent. on the whole amount of capital.</p>                                                                                                                                                                                                                                                         |
| <p>27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                                                                                                           | <p>27. From 30 to 40 bushels flour per annum, 2,500 to 3,000 lbs. beef and pork, 10 tons hay, 400 bushels oats and corn, 30 bushels potatoes and turnips, various cotton and woollen goods, &amp;c.</p>                                                                                                                    |
| <p>28. What quantity or amount of manufactures, such as you make, are produced in the United States; and what amount in your own State?</p>                                                                                                                                                                                                       | <p>28. I should think, from my own knowledge, there were 20,000 dog shovels and spades made in the United States, and perhaps as many more that I have no knowledge of; sheet iron, to the best of my knowledge, I would say 2,000 tons: the other articles no idea; the only establishment of the kind in this State.</p> |
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p>                                                                    | <p>29. We should have to abandon the sheet iron business if such reduction was made.</p>                                                                                                                                                                                                                                   |
| <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                                                                                                                                             | <p>30. Loan it at 5 or 6 per cent., buy bank stock, or employ it in electioneering for a good fat office.</p>                                                                                                                                                                                                              |
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?</p>                                                                                                                                                                              | <p>31. There are many.</p>                                                                                                                                                                                                                                                                                                 |

ALLEN WOOD.

*Jacob Alrichs & Son, Machinists, Newcastle County, Delaware.*

| QUESTIONS.                                                                                  | ANSWERS.                                                                                         |
|---------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------|
| <p>1. State and county in which the manufacture is situated?</p>                            | <p>1. State of Delaware, Newcastle county.</p>                                                   |
| <p>2. Kind or description of the manufactory; and whether water, steam, or other power?</p> | <p>2. Shops for making machinery for manufacturing cotton, wool, &amp;c.; by steam.</p>          |
| <p>3. When established; and whether a joint stock concern?</p>                              | <p>3. Established in 1808, by Alrichs &amp; Dixon, now conducted by Jacob Alrichs &amp; Son.</p> |

## DOCUMENT 16.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                        |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| 4. Capital invested in ground and buildings, and water power, and machinery?                                                                                                                                                                                                                         | 4. Ground and buildings \$3,500; machinery about \$4,000.                                       |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. About ten thousand dollars annually.                                                         |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. About eight per cent. on that not borrowed; two per cent. on borrowed.                       |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                              | 7. By encouragement or depression of cotton and wool manufactures.                              |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. About \$12,000 worth; \$10,000 cotton machinery, \$2,000 wool machinery, and other articles. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. About 30 tons best American iron, and one ton common English iron.                          |
| 11. Cost in the United States of similar articles of manufactory imported from abroad, and from what countries?                                                                                                                                                                                      | 11. None imported that we know of, for the last three or four years.                            |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. About 20 men, at \$1 25 per day; about 5 boys, at 50 cents per day.                         |
| 13. How many hours a day employed; and what portion of the year?                                                                                                                                                                                                                                     | 13. Ten and a half hours a day, all the year.                                                   |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                                                                     | 14. About the same.                                                                             |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. None.                                                                                       |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                                                            | 16. At the establishment.                                                                       |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                           | 17. Not any imported that we know of, for the last three or four years.                         |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Within sixty miles round the establishment.                                                 |
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                                                            | 19. Others, in Pennsylvania, have made machinery for South America and Mexico, but we have not. |
| 20. Whether the manufactory is sold by the manufacturer for cash? and, if on credit, at what credit? If bartered, for what?                                                                                                                                                                          | 20. Cash.                                                                                       |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                          | 21. Increased in cost by being made more perfect; price about the same.                         |

*McClary & Bush, Machinists, Newcastle County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                                                                  | 1. Delaware, Newcastle county.                                                                                                                                      |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                                                       | 2. Cotton and woollen machinery, steam engines, and railroad cars; steam power.                                                                                     |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                                                                    | 3. September, 1828; a company, consisting of two persons.                                                                                                           |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                                                                                                | 4. Six thousand dollars.                                                                                                                                            |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                                                            | 5. Three thousand five hundred dollars.                                                                                                                             |
| 7. Cause of the increase, (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                                                                    | 7. The American system, as it now exists, is the cause of increase; if abandoned for a system of slavery, it would be a cause of ruin.                              |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. Sixteen men, five boys; \$1 12½ for men.                                                                                                                        |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Eleven hours; all the year.                                                                                                                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                                                                                                  | 16. The general market within 100 miles, but confined to no particular market.                                                                                      |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                                 | 17. Existing duties protect us from foreign competition.                                                                                                            |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. Articles of similar manufacture have been exported to South America.                                                                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                 | 20. On credit when the <del>millers</del> let us and the tariff alone; for cash when they wish their negroes free—not from slavery, but from the fear of Americans. |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. See speeches on nullification and disunion.                                                                                                                     |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. The rate now existing.                                                                                                                                          |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Patriots for collectors, not office-hunters.                                                                                                                    |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. All the profits have been retained for capital and contingencies.                                                                                               |
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent, with a cor-                                                                                                                                                                                                                 | 29. We would abandon the business.                                                                                                                                  |

DOCUMENT 16.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                    | ANSWERS.                                                                     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|
| responding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?                 |                                                                              |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                | 30. Probably in learning the art of living as a southern nabob.              |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.? | 31. We know of nothing except selling drugs in the swamps of South Carolina. |

WILMINGTON, *Third Month* 29, 1832.

RESPECTED FRIEND: As thou requested me, I have taken the pains to examine my books to ascertain the amount of iron of the various kinds sold by me in the year 1831, and find that I have sold, of sheet iron, band iron, bar iron, plough castings and scrap iron, rather more than 159 tons, valued together at \$15,366; steel, of various kinds, 9,287 lbs., \$1,558; and cut nails, made at our own factory, 32,000 lbs., at about \$4,840; and during the year I sold of bituminous or Virginia coal, 9,350 bushels; and of charcoal over 10,000 bushels. Edward Gilpin can furnish thee with the amount of his sales, from which, with my account, a pretty accurate calculation can be made of the amount of iron and coal used in this county; although, no doubt, part of what we sell goes into Delaware and Chester county, and a small portion into Maryland, but I think four-fifths of all the iron sold in this place is worked in Newcastle county. Wood & Reeves have used, within the last year, iron and coal to the amount of \$2,500 alone. George Hodgson, I expect, nearly as much. I have very little knowledge of the furnace in the lower part of this State, but suppose that it must have made, of stove plate, and pig metal, hollow pipe, &c., about 900 tons. Wood, at their rolling mill, on Red Clay Creek, must have rolled, of iron and steel, 200 tons during last year. This is the substance of what information I can give thee at this time.

JOSUEA GILPIN.

Thy friend,  
THOMAS GARRETT.

BRANDYWINE PAPER MILLS.

STATISTICAL ESTIMATE OF THE MANUFACTURES OF DELAWARE—CONTINUED.

*Newcastle County*—Continued.

Brandywine Creek: The Brandywine paper mills, late G. & T. Gilpin, now owned by the Brandywine Manufacturing Company.

Water power employed:

103\*

Hours of work, winter and summer, average 11½ hours.

School on the estate to school the children, and night school for the people in winter.

Pays an interest over six per cent. on the capital, after paying commission and all expenses.

Paper sent to Philadelphia, where it is sold at our warehouse, or sent to our customers through all the United States.

The paper we make we sell at a less price than the same quality of paper could be sold at here, imported from Europe under any tariff which has existed since the establishment of the Government. But we have been occasionally interfered with when the inferior and other papers have been brought here from the south of Europe, and sold at reduced prices. These have been consumed here, greatly to the injury of our regular business; the quality did not suit the market, and had to be sold the lower on this account.

We could not turn the establishment to any other object, as many of our people have been brought up to this manufacture only, and have lived here from 20 to 30 years.

Whole population, 200 persons.

Establishment begun in 1787, and has continued ever since unremittingly.

Paper is demanded and sent to Mexico and the West Indies.

From the introduction of the most perfect machinery and workmen, and an experience in the business during the long period since its establishment, we have so economized in its various processes as to furnish paper suited to every demand of the country, lower than the same qualities are furnished to the public of any country in any part of the world. But in doing this, we have had to meet very great competitions, and our profits, per centum, are reduced to very near the interest on the capital. It therefore requires that we should be protected from those occasional interferences which arise from the artifices of trade, speculation, or adventure, which are occasionally made, by which our home market has been taken from us, our business deranged, and from an over-supply of markets abroad, foreign papers forced upon us.

In proportion as we work low, our advantages are small, and we are deprived of the means of sustaining a loss, or even the delay of our regular sales. At times when we have suffered from an extra importation, it has taken a long time to recover from the effects of it, and it has frequently produced a derangement of our business almost threatening an annihilation of the establishment.

BALTIMORE, *March 19, 1833.*

DEAR SIR: I am favored with yours of the 17th instant, and note its contents. I am just on the eve of leaving home, and shall not be able to go into detail on the queries submitted; but having recently answered some of the leading ones, from a committee of the New York Convention, I recollect them sufficiently to give them to you briefly.

We manufacture at our mill on White Clay creek, about \$22,000; employ in the interior of our mill 34 hands, 8 men, the remainder are women, girls, and boys; the wages to these is \$5,000 per annum; and to persons employed around the establishment, and to other citizens, about 2,500 to \$3,000. Of the families employed in the works, there is about 70 persons, large and small, besides the 34, in all, 104. We use, almost exclusively, American rags; the cost \$11,000. We estimate the value of our works at \$18,000, besides the firm; capital employed \$20,000, total \$38,000.

In haste, your friend,

WM. METEER.

P. S. Specific is preferable to an ad valorem duty. I am not prepared to say what reduction would bring the foreign in competition with the domestic; but the capacity of the country is quite sufficient to meet all its wants; the quantity produced has increased within ten years more than 25 per cent., and the price has fallen quite 20 per cent. I regret that I am not at leisure to enlarge on this subject. If the tariff is not sustained, the nation is ruined.

W. M.

## DOCUMENT 16.—No. 2—Continued.

*E. J. Dupont's Answer to the Queries received from the Secretary of the Treasury.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. State of Delaware, Newcastle county.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Gunpowder; water power.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. In 1804; several partners.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 4. Capital invested in ground and buildings, and water power, and machinery?                                                                                                                                                                                                                         | 4. The manufacture having been gradually and progressively enlarged out of its profits, ever since its establishment, the whole amount of capital invested cannot be calculated. The present value of the land, buildings, water power, and machinery, may be estimated at \$80,000. This estimation is based on the supposition of the continuation of the prosperity of the country; should the protection be withdrawn, American labor must take its level with the labor of the manufacturing countries in Europe, and the value of American produce and real estate must fall in the same proportion. |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. The average amount of capital involved as stock in trade, comprehending the materials on hand, and purchased at credit from the importers, is estimated at \$100,000. The materials purchased at a credit have been included in this estimate, being an important item in the necessary means for the carrying on of the manufacture; and being, in fact, a part of the capital involved, no matter to whom it belongs.                                                                                                                                                                                 |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. As stated in answer to query No. 4, a large portion of the profits has been applied to the increase of the establishment, and to secure its permanency by improvements, from which the annual rate of profits cannot be calculated. A large proportion of the profits have been sunk in rebuilding the works after extensive explosions. The rate of profits should be the same on capital borrowed or not borrowed; the real capital, as well as the borrowed, is entitled to interest, before any part of the proceeds can be called profit.                                                          |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                               | 7. The price of gunpowder in the United States being at this time entirely regulated by the great competition existing between the American manufacturers; the only causes of increase or decrease of profit, or of losses, consist in the degree of skill of the manufacturer, and the proper management of the business.                                                                                                                                                                                                                                                                                 |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. The amount of gunpowder manufactured annually by us, is at this time about 850,000 pounds. The quantity made since the establishment of the manufacture to the present time, is about 13,400,000 pounds.                                                                                                                                                                                                                                                                                                                                                                                                |

## DOCUMENT 16.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                            | 10. The quantity of materials used is about 400 tons of crude saltpetre, imported from India; 50 tons of brimstone, from France or Italy; and 300 cords of wood, for charcoal. The cost of saltpetre is at this time about 7 cents per pound, brimstone $2\frac{1}{2}$ to 3 cents.                                                                                                                                                  |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                            | 11. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                          | 12. About 140 men working in the mills, laborers, carters, coopers, &c. &c.                                                                                                                                                                                                                                                                                                                                                         |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                           | 13. Twelve hours in summer, and nine in winter, averaging during the year, eleven hours per day.                                                                                                                                                                                                                                                                                                                                    |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries?                                                                                                                           | 14. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                            | 15. Two teams of five horses each, for the hauling of materials and produce, and several horses for other purposes.                                                                                                                                                                                                                                                                                                                 |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                  | 16. The manufactured articles are sold on the orders of customers, or sent to agents, for sale in different parts of the United States.                                                                                                                                                                                                                                                                                             |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale; and to what extent?                                                                                                                                 | 17. At the time of the establishment of our manufactory in 1804, the country was supplied almost entirely from England and from Holland. At this time we do not know of any foreign importation, except at Boston, and that to a trifling amount.                                                                                                                                                                                   |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                   | 18. Entirely for home consumption in the United States.                                                                                                                                                                                                                                                                                                                                                                             |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                   | 19. None from our manufactory, but a large quantity of gunpowder is manufactured in the United States for exportation to the West Indies, South America, and the western coast. The quantity exported annually is about 1,200,000 pounds.                                                                                                                                                                                           |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                     | 20. A portion of the sales are made for cash; the rest on a credit of four to six months.                                                                                                                                                                                                                                                                                                                                           |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased, and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. The variations in the cost of materials have been great since the establishment of the manufactory. Saltpetre from 40 cents per pound at one time, to 5 cents at another; brimstone from 12 cents to 2. The cost of the manufactured article has been gradually and considerably decreased by improvements in the process of manufacturing, and by the introduction of machinery.                                               |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. At the time of the establishment of our manufactory, the country was, as stated before, supplied principally with imported gunpowder. The importers had then the regulation of the price, which kept steady for years at 40 cts. per pound; during 1804 and 1805, our powder brought the same price, say 40 cents. In 1806 American competition began to be felt, and the price was reduced to 36 cents. In 1807, from the same |

| QUESTIONS.                                                                                                                                                                                | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?</p>                                         | <p>cause it fell to 34 and 32. During the non-intercourse, embargo, and war, the scarcity and high price of materials, and the extent of the demand, raised the price gradually to 44, 60, and 72 cents. A number of large manufactories having then been put in operation, the price during the last year of the war was reduced to 56 cents. Extensive home competition has since reduced the price of our powder to be, at this time, from 16 to 20 cents; and inferior powder, for blasting, and for exportation, sells as low as 12 to 14 cents per pound.</p>                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?</p>                                                                                   | <p>23. The encouragement given to the manufacture of gunpowder by the war, and the protection it has received from the tariff, have placed the home market entirely in the hands of the American manufacturers, and made gunpowder an article of exportation. The price of saltpetre is now higher in England than in the United States, and powder could not be imported at this time, even duty free. The duty is therefore merely nominal; nobody pays it; but, nevertheless, the present high duty is indispensable for the security and permanency of this branch of manufacture, and as a safeguard to the American manufacturer against the fluctuations of the market in Europe. Were it not for the protective duty, our market would occasionally be glutted by immoderate importations; the situation of the American manufacturer would become precarious, and, in course of time, inevitable ruin would follow.</p>                                                        |
| <p>25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the in-</p> | <p>24. The duty on gunpowder being specific, is the best kind of duty. The propriety of allowing the drawback on imported powder is, however, doubted; the manufacture of American gunpowder being so extensive as to furnish an annual exportation of about one million of pounds, there could not be any motive to encourage by the prospect of drawback, an importation of English damaged and low-priced powder, which of late years has not been more than from 50 to 70,000 pounds. Would it not be more to the interest of our commerce to import an adequate quantity of saltpetre from India, and brimstone from Italy, the freight of which would exceed the freight on the powder from England, and which would be imported on American accounts, while the powder in most cases is sent here by the British owners, not finding sale in their own market for a damaged or inferior article?</p> <p>25. Public interest does not seem to us to have any concern in this.</p> |

| QUESTIONS.                                                                                                                                                                                                                                                                     | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>come of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?</p>                                                                                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <p>26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?</p>                                                                                            | <p>26. The mere cost of materials and amount paid for labor, would give a very erroneous idea of the profits of any manufacture. The interest of capital, numerous contingent expenses, the repairs of machinery, the chance of losses, &amp;c. &amp;c. ought also to be calculated.</p>                                                                                                                                                                                         |
| <p>27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?</p>                                                                                                                        | <p>27. The subsistence of the men employed, and of their families, and of all those indirectly supported from the manufacture, are agricultural productions. The same number of persons manufacturing the article in Europe, would not consume a single pound of American produce.</p>                                                                                                                                                                                           |
| <p>28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?</p>                                                                                                                                    | <p>28. We believe the quantity of gunpowder manufactured annually in the United States to exceed six millions of pounds.</p>                                                                                                                                                                                                                                                                                                                                                     |
| <p>29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?</p> | <p>29. We should not abandon our business immediately. The prices of our produce could not at this time be reduced by importation; the principal material, saltpetre, being higher in Europe than here. But, as explained in our answer to query No. 23, inevitable ruin would, at some future time, be the consequence of the withdrawing of protection.</p>                                                                                                                    |
| <p>30. If it would cause you to abandon your business, in what way would you employ your capital?</p>                                                                                                                                                                          | <p>30. A capital employed in manufacture, consisting principally in water power, buildings, and machinery; the consequence of a reduction of the tariff which would cause the business to be abandoned, would amount to nearly a total loss of the capital.</p>                                                                                                                                                                                                                  |
| <p>31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?</p>                                                                                                           | <p>31. In this case it is difficult to say what would be best to do; if protection be withdrawn, a great change will take place in commercial and agricultural business as well as in manufactures.</p>                                                                                                                                                                                                                                                                          |
| <p>32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?</p>                                                                             | <p>32. The circle within which the manufacturers of salt and iron, remote from the point of importation, are secured against foreign competition, cannot be specified. When the manufactures are not protected by sufficient duties, the circle extends or contracts in proportion to the fluctuations of the European market, or in consequence of the manufacturers in Europe overtrading themselves, as has been of late the case in England for the manufacture of iron.</p> |
| <p>33. Amount of capital; and what proportion the borrowed capital bears to that which is real?</p>                                                                                                                                                                            | <p>33. It makes no difference if a capital involved in a manufactory is borrowed or not. The capital is there, and subject to all risks no matter who owns it.</p>                                                                                                                                                                                                                                                                                                               |
| <p>34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual should the reduction be?</p>                                                                                               | <p>34. Besides the six per cent. for interest, a capital employed in manufacture must produce enough to keep the works and machinery in repair, and to insure against fire.</p>                                                                                                                                                                                                                                                                                                  |

| QUESTIONS.                                                                                                                                                                                                       | ANSWERS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 35. If minimums should be abolished, and the duty assessed upon the actual value of the imported article in the American port, what rate of ad valorem duty would be equivalent to the present with the minimum? | and against bad debts; otherwise the business would soon be at an end. It must, besides, offer to the manufacturer a reasonable compensation for his industry. Any one can place his capital at six per cent., and enjoy a much easier life than that of a manufacturer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 36. What should be the operation of this change upon the frauds at present supposed to practised?                                                                                                                | 35 & 36. If the actual value of the imported article in the American port could be fairly established, it would most assuredly be a preferable base for the assessment of duty to the present system of fabricated invoices. It would, however, have the effect of reducing the duty in case of over-large importations, and of increasing it when the market would be bare. Cash duties would be the most salutary change, as it would prevent the most ruinous of all importations, those made for account of British merchants or manufacturers, who are induced by the credit on duties to send here any article, of which the sale at home would be injurious to their own market, and which they had better export, no matter what price it will bring. |
| 37. Proportion which the production by the American manufacturers bears to the consumption?                                                                                                                      | 37. Almost the whole consumption of gunpowder in the United States is supplied from American manufactures; the small quantity imported being principally re-exported for the sake of drawback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824?                                                                                 | 38. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 39. Average profit of money or capital in the United States?                                                                                                                                                     | 39. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| 40. Average rate of wages?                                                                                                                                                                                       | 40. We do not know.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

E. J. DUPONT DE NEMOURS &amp; CO.

ELKTHURIAN MILLS, April 12, 1832.

BEAUFORT, March 9, 1832.

DEAR SIR: I regret that it was not in my power to make a speedier answer to your queries. I now enclose it to you, wishing you to present my best respects to the ladies, and to believe me, very sincerely,

Your obedient servant,

J. P. GARRESCHÉ.

JOSHUA GILPIN, Esq.

J. P. Garresché's Gunpowder Manufactory, Newcastle County, Delaware.

| QUESTIONS.                                                                           | ANSWERS.                             |
|--------------------------------------------------------------------------------------|--------------------------------------|
| 1. State and county in which the manufactory is situated?                            | 1. Delaware, Newcastle county.       |
| 2. Kind or description of the manufactory; and whether water, steam, or other power? | 2. Gunpowder; steam and horse power. |

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3. When established; and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Private concern; begun in 1819.                                                                                                                                                               |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                                                          | 4. About twenty-five thousand dollars.                                                                                                                                                           |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. About thirty-three thousand dollars.                                                                                                                                                          |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. From 12 to 15 per cent., on the first cost, when exempt from explosions and risks, which cannot be insured.                                                                                   |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                               | 7. The profits have varied but little since 1820; the fluctuation in the price of saltpetre may be considered as the only cause; the price of the manufactured article not keeping pace with it. |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. I have not sufficient data to answer this question with any degree of precision.                                                                                                              |
| 9. Amount of articles annually, manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                               | 9. About 250,000 lbs. annually.                                                                                                                                                                  |
| 10. Quantity and value of different kinds of raw materials used, distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. The saltpetre and sulphur are the only foreign articles employed.                                                                                                                            |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. The only imported powder that I know of, is the English sporting powder, which is retailed at a higher price than mine, though not any better.                                               |
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                    | 12. From 21 to 23 men are employed; women and children are not employed in this business, except for stripping the willows of its bark; lowest wages \$17 per month.                             |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                     | 13. From sun to sun all the year round.                                                                                                                                                          |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                      | 15. About ten horses and two pairs of oxen.                                                                                                                                                      |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                                                                                                                                                                                            | 16. The powder is sent to different parts of the Union, either to agents or purchasers; a portion is exported to the West Indies; a small portion only is sold at the factory.                   |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                             | 18. Answered above.                                                                                                                                                                              |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                             | 19. Already answered.                                                                                                                                                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                                                           | 20. Principally on a credit of six to twelve months.                                                                                                                                             |
| 21. Whether the cost of the manufactured article (to the manufacturer,) has increased or decreased; and how much in each year, from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                         | 21. The cost has gradually declined owing to a substitution of machinery for manual labor. The price of labor has declined in a greater proportion from competition.                             |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                 | 22. In 1819 powder was sold at about 38 cents per pound; I allude to the best quality; it has been reduced to its present value by a gradual fall.                                               |

## QUESTIONS.

23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?

24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?

25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually?

26. What portion of the cost of your manufactures consists of the price of the raw material, what portion of the wages of labor, and what portion of the profits of capital?

27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?

28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?

29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices?

30. If it would cause you to abandon your business, in what way would you employ your capital?

31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?

32. Are not the manufactures of salt and iron remote from the points of importation, out of foreign competition within a certain circle around them, and what is the extent of that circle?

33. Amount of capital, and what proportion the borrowed capital bears to that which is real?

34. What amount of reduction in the duties would enable the actual or real capital employed to yield an interest of 6 per cent.; and how gradual should the reduction be?

## ANSWERS.

23. The present duty has proved sufficient, but the taking off of the duty on saltpetre would materially favor the exportation of gunpowder. I would recommend a bounty on the exportation of powder, about equal to the amount of duty on the saltpetre employed; extensive exportations might have been made had this bounty existed: this I know from my own experience. For the home market the present duty is sufficient, owing to the superiority of our powder.

24. I know of no reason why the present mode of collection should be changed.

25. Look to answers 3, 6, and 7.

26. The proportion of labor to the material employed is about one-eighth part of the whole cost.

27. The amount of agricultural and other domestic productions averages, I presume, from 20 to 25 per cent.

28. I should suppose from seven to eight hundred thousand pounds annually in this State.

29. The profits upon this manufacture, considering the risk of life and property, are so moderate that a further depression would be entirely discouraging.

30. In such an emergency, circumstances alone would direct the employment of the capital.

These queries do not come within my sphere of knowledge.

| QUESTIONS.                                                                                                                       | ANSWERS.                                                  |

| 36. What would be the operation of this change upon the frauds at present supposed to be practised?                              | These queries do not come within the sphere of knowledge. |
| 38. Extent of individual and household manufacture in the United States, and how much it has increased since the tariff of 1824? |                                                           |
| 39. Average profit of money or capital in the United States?                                                                     |                                                           |
| 40. Average rate of wages?                                                                                                       |                                                           |

In conformity with the request of Andrew Gray, as contained in his circular, of Nov. Month 14, 1832, addressed to the different manufacturers in this State, the following statement of one year's business done in a tannery, in this place, by the subscriber, is now respectfully submitted.

**ISAAC JACKSON**

WILMINGTON, DEL., *Fourth Month* 30, 1832.

NOTE.—The hides in this tannery are principally slaughter or green, and produce this market at five cents a pound.

*Account of Stock purchased in the year ending Twelfth Month 31, 1831.*

|                                                          |   |   |   |   |   |               |
|----------------------------------------------------------|---|---|---|---|---|---------------|
| 600 sole leather hides,* cost                            | - | - | - | - | - | \$894         |
| 200 upper do.                                            | - | - | - | - | - | 20            |
| 600 calf skins                                           | - | - | - | - | - | 480           |
| Amount of hides and skins in the raw state               | - | - | - | - | - | 1374          |
| 90 cords Spanish oak bark, at \$11                       | - | - | - | - | - | 990           |
| 10 do black oak, at \$6                                  | - | - | - | - | - | 60            |
| Labor of two men and two boys, one year                  | - | - | - | - | - | 120           |
| Expense of keeping one horse for grinding bark           | - | - | - | - | - | 75            |
| Rent of tanyard                                          | - | - | - | - | - | 75            |
| Incidental expenses for portorage, freight, repairs, &c. | - | - | - | - | - | 75            |
|                                                          |   |   |   |   |   | <hr/> 1380    |
| One year's interest on \$5,000 capital                   | - | - | - | - | - | 250           |
|                                                          |   |   |   |   |   | <hr/> \$1,630 |

The proceeds of the above stock when manufactured, may be estimated, at the ~~present~~ market prices, as follows:

|                                                      |   |   |   |   |   |   |   |        |
|------------------------------------------------------|---|---|---|---|---|---|---|--------|
| 16,000 lbs. sole leather, at 25 cents                | - | - | - | - | - | - | - | 4.00   |
| 200 upper leather hides, at \$4 50                   | - | - | - | - | - | - | - | .90    |
| 600 calf skins, at \$20 per dozen                    | - | - | - | - | - | - | - | 1.00   |
| Sales of offal, viz. horns, tails, hair, glue pieces | - | - | - | - | - | - | - | 1.75   |
|                                                      |   |   |   |   |   |   |   | 6.65   |
| Amount of raw materials and expenses brought down    | . | . | . | . | . | . | . | 5.85   |
| Net proceeds                                         | - | - | - | - | - | - | - | \$ .80 |

\* Having kept no regular account of stock, the quantity of each article is partly ~~uncertain~~ but is, nevertheless, I apprehend, nearly correct.

The price of sole leather, as above stated for the past year, is higher by from 1½ to 2¢ per lb. than we have realized in several preceding years, which would reduce the net proceeds \$320, leaving only \$280 clear gain. No charge is made in the above account for superintendence of the business.

*General Remarks.*

The amount of tanning business done in this place has been much diminished within fifteen or twenty years past; at the same time that it has been increasing in the adjacent country. This change, it is believed, is principally owing to the high price of Spanish oak bark in the former, which has generally been at eleven dollars a cord, for that brought in wagons, (which is very limited in quantity,) and from thirteen to fifteen dollars for that shipped from the lower parts of this peninsula. At the distances of twenty and thirty miles from this place, in the country bordering on the Susquehanna river, good Spanish oak bark is procured at five, six, and seven dollars a cord; hence it will readily be seen that tanners located in that district, have an advantage of six or seven dollars a cord above those in this place, making in a stock of 200 cords, an annual saving of \$1,200 at least. It may be observed that they are subject to considerable expense in the transportation of hides to their establishments, and of the leather to market, which, for a stock of 1,000 heavy Spanish hides, may be estimated at \$200, which leaves a balance of \$1,000 annually in favor of the country establishments, besides the comparative cheapness of the current expenses of a family.

In ascribing the decline of the business in this place to the high price of bark, I may be thought in error, as it was equally high in former years, when more than double the amount of the present business was done; but at that time the prices of Spanish hides were lower, and the prices of leather 20 per cent. higher. In 1817-18, best Spanish hides were from 14 to 16 cents per lb., and sole leather from 30 to 32 cents. At this time hides are from 16 to 18 cents, Spanish sole leather from 22 to 25 cents.

I have no information of sole leather being imported from other countries into this in such quantity as to interfere with our manufacture. A few years since, a considerable number of light calf-skins, in a finished state, were imported from France, which, it was apprehended, might have a depressing effect on that article here; but of late I have heard nothing reported concerning them, that I conclude the trade was not found to answer.

Very respectfully,  
ISAAC JACKSON.

WILMINGTON, DEL, *Fourth Month* 30, 1832.

WILMINGTON, *Fourth Month* 30, 1832.

ESTEEMED FRIEND: According to the best information I can obtain at this time, there are eight tanneries in occupation in this county; the annual sales from which may probably average five thousand dollars each, making an aggregate of forty thousand dollars.

It appears that thirteen tanneries in this county have been vacated within the last fifteen years.

Respectfully, thy friend,  
ISAAC JACKSON.

JOSHUA GILPIN.

WILMINGTON, *Fourth Month* 30, 1832.

RESPECTED FRIEND: Pursuant to thy request, I called on James Carson and Isaac H. Starr, tanners, who informed me they had some time since furnished an account of their business to William A. Mendenhall. Having procured a copy of the queries addressed by Andrew Gray to the manufacturers of this State, and observing the instructions contained in a note appended thereto, have given a general or summary statement of my business, together with some general observations on the causes of the decline of the tanning business in this place, which may be applicable to others similarly situated.

Respectfully,  
ISAAC JACKSON.

JOSHUA GILPIN.

ANDOVER, *Third Month* 11, 1832.

RESPECTED FRIEND: Enclosed I send thee a statement made out by Alexander Peterson, one of the firm of John and Alexander Peterson. It embraces the manufactories of leather and quercitron bark in the county of Kent, Delaware, and I make no doubt, is mainly cor-

## DOCUMENT 16.—No. 2—Continued.

rect. Alexander, from the nature of his pursuits, is intimately acquainted with all the tanneries and bark grinding establishments in the county, and besides, I consider him a man of excellent judgment, and one that may be implicitly relied upon for whatever he may give. I shall be glad if what is now sent may be found such as thee wants.

There are no mills in the county that manufacture flour or meal for export; they are all mere country establishments, engaged in doing a domestic business for their respective neighborhoods. There exists near Milford a small iron concern, at which a few castings are produced for the surrounding country; but I understand none whatever are sent abroad, and that the whole business is a very minor matter indeed. I know the owner, and, from his circumstances, should hardly think that the establishment would be worth notice.

Two days since, I went to Delaware to get the needful information on the woollen business. I called upon Alexander Murphy, who is perhaps the most extensively concerned, but unluckily found him from home: he has returned by this time, and I intend seeing him to-morrow, when I hope to give thee the wanted information. He is well acquainted with all that is doing in the woollen trade, and I doubt, will at once give a pretty correct statement. As soon as I get it, there shall be no delay in sending it on. When thy first letter and circular reached me, I was confined pretty much to the house with the influenza, which I must offer as an excuse for not giving earlier attention to thy requests: however, as I am now nearly myself again, I trust a day or two hence will furnish all I can give; and I have only to say, that whenever any little services I can render may be useful to thee, thee can command them at pleasure.

I should not have forwarded the present statement till I had completed the whole, had it not been to convince thee that I have not been inattentive to thy wishes, but anxious to give the earliest and best information I could obtain.

With sentiments of much respect, thy friend,

JOHN TURNER

JOSHUA GILPIN, Esq.

PHILADELPHIA, *Fourth Month* 11, 1832.

RESPECTED FRIEND: Enclosed is a list of the mills of Kent county, Delaware, with their probable value; it was furnished by Thomas Mifflin, of Camden, and I presume is nearly accurate.

As the whole of the mills are engaged in country operations, I should think that an allowance of two hands to each would be about the fair thing.

The cost of the bark establishments, and number of hands engaged therein, I think thee will find in Alexander Peterson's letter, sent on a former occasion.

Very respectfully, thy friend,

JOHN TURNER

JOSHUA GILPIN, Esq.

*Statement of the Tanneries in operation in Kent County, State of Delaware, 1831.*

Benjamin Potter, Milford. Value of real estate, \$1,500; capital employed exclusive of real estate, (supposed,) \$6,000; amount of leather produced annually, (supposed,) \$5,000; number of hands employed, four.

John M. Darby, Milford. Value of real estate, \$1,500; capital employed exclusive of real estate, (supposed,) \$4,000; amount of leather produced annually, (supposed,) \$3,000; number of hands employed, three.

Thomas Clark, Frederica. Value of real estate, \$1,000; capital employed exclusive of real estate, (supposed,) \$6,000; amount of leather produced annually, (supposed,) \$5,000; number of hands employed, four.

James Green, Willow Grove. Value of real estate, \$500; capital employed exclusive of real estate, (supposed,) \$1,000; amount of leather produced annually, (supposed,) \$1,000; number of hands employed, two.

Green & Scott, Georgetown. Value of real estate, \$500; capital employed exclusive of real estate, (supposed,) \$1,000; amount of leather produced annually, (supposed,) \$1,000; number of hands employed, two.

John & Alexander Peterson, Smyrna. Value of real estate, \$5,000; capital employed exclusive of real estate, \$25,000; amount of leather produced annually, \$20,000; number of hands employed, nine.

## DOCUMENT 16.—No. 2—Continued.

*A Statement of the Manufactories of Quercitron Bark, by water power, in operation in Kent County, State of Delaware, 1831.*

Joseph G. Oliver, Milford. Quantity of black oak bark used, 400 cords; number of hands employed, seven; capital employed, \$3,000; value of mill and machinery, \$2,500.

Charles Kennedy, near Milford. Quantity of black oak bark used, 250 cords; number of hands employed, five; capital employed, \$20,000; value of mill and machinery, \$1,000.

Charles Stedham, near Frederica. Quantity of black oak bark used, 400 cords; number of hands employed, seven; capital employed, \$3,000; value of mill and machinery, \$2,500.

Joseph Smithers, near Frederica. Quantity of black oak bark used, 300 cords; number of hands employed, six; capital employed, \$2,500; value of mill and machinery, \$2,000.

Penewell & Sipple, Dover. Quantity of black oak bark used, 500 cords; number of hands employed, eight; capital employed, \$3,500; value of mill and machinery, \$3,000.

B. A. Crawford, Smyrna. Quantity of black oak bark used, 500 cords; number of hands employed, eight; capital employed, \$3,500; value of mill and machinery, \$3,500.

George Stedham, near Smyrna. Quantity of black oak bark used, 300 cords; number of hands employed, six; capital employed, \$2,500; value of mill and machinery, \$2,000.

Alexander V. Murphy, near Smyrna. Quantity of black oak bark used, 200 cords; number of hands employed, four; capital employed, \$1,500; value of mill and machinery, \$1,000.

SMYRNA, March 10, 1832.

\*RESPECTED FRIEND: I send you a statement, the best I can make from my general knowledge of the business done in the county, and the very limited time to prepare it. Had I more time to make the necessary inquiry, I could, perhaps, furnish one more satisfactory to myself; but this one is no great way from the truth.

Very respectfully, yours,  
ALEXANDER PETERSON.

MR. JOHN TURNER.

*Robert Houston, son of John's, Tannery, Sussex County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                        | ANSWERS.                                                 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                         | 1. Sussex county, Delaware.                              |
| 2. Kind or description of the manufactory, and whether water, steam, or other power?                                                                                                                                                                                                              | 2. Leather tannery; horse power.                         |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                           | 3. In 1810; individual concern.                          |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                                                       | 4. Two thousand dollars.                                 |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                   | 5. Six thousand dollars.                                 |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which borrowed, after providing for the interest upon it; and the rate of profit upon that portion which is not borrowed? | 6. Annual profit \$1,000; no part borrowed.              |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                    | 8. From six to ten per cent.                             |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                             | 9. Twelve hundred sides of sole leather tanned annually. |

| QUESTIONS.                                                                                                                       | ANSWERS.                                                             |
|----------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?  | 10. Hides brought from Spanish Amer.                                 |
| 12. Number of men, women, and children employed, and average wages of each class?                                                | 12. Three men and one boy; \$15 for men and \$6 for boys, per month. |
| 13. How many hours a day employed, and what portion of the year?                                                                 | 13. Ten hours each day, all the year.                                |
| 14. Rate of wages of similar classes otherwise employed in the same State and county, in other States, and in foreign countries? | 14. Nine dollars per month.                                          |
| 15. Number of horses, or other animals employed?                                                                                 | 15. One horse.                                                       |
| 16. Whether the manufactures find a market at the manufactory? If not, how far are they sent to a market?                        | 16. Sent to Philadelphia, 120 miles.                                 |

*Peter F. Causey's Oil and Bark Mill, Sussex County, Delaware.*

| QUESTIONS.                                                                                                                                                                                                                                                                                           | ANSWERS.                                                                                                                                               |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                                                                                                                                                                                            | 1. Sussex county, Delaware.                                                                                                                            |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                                                                                                                                                                                 | 2. Linseed oil mill, and quercitron bark factory; both by water power.                                                                                 |
| 3. When established, and whether a joint stock concern?                                                                                                                                                                                                                                              | 3. Established in 1828; individual stock.                                                                                                              |
| 4. Capital invested in ground and buildings, and water power and machinery?                                                                                                                                                                                                                          | 4. Five thousand dollars.                                                                                                                              |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                                                                                                                                                                                      | 5. Seven thousand dollars.                                                                                                                             |
| 6. Annual rate of profit on the capital invested since the establishment of the manufactory; distinguishing between the rate of profit upon that portion of the capital which is borrowed, after providing for the interest upon it, and the rate of profit upon that portion which is not borrowed? | 6. Suppose 10 per cent.; none borrowed.                                                                                                                |
| 7. Cause of the increase (or decrease, as the case may be,) of profit?                                                                                                                                                                                                                               | 7. The decrease of profit on quercitron bark, caused by the quantity manufactured, on account of duty not sufficient.                                  |
| 8. Rates of profit on capital otherwise employed in the same State and county?                                                                                                                                                                                                                       | 8. Thirty-three per cent.                                                                                                                              |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind?                                                                                                                                                                | 9. Two thousand gallons oil; two hundred tons quercitron bark, both of the first quality; oil, at an average of 85 cents; bark, \$15 per ton, average. |
| 10. Quantity and value of different kinds of raw materials used; distinguishing between foreign products and domestic products?                                                                                                                                                                      | 10. 500 cords black oak bark, at five dollars, \$2,500; 1,500 bushels flax-seed, \$1.25, \$2,250; domestic.                                            |
| 11. Cost in the United States of similar articles of manufacture imported from abroad, and from what countries?                                                                                                                                                                                      | 11. Bark, none; linseed oil, from Europe and Russia.                                                                                                   |

| QUESTIONS.                                                                                                                                                                                                                                                                                                                                 | ANSWERS.                                                                                                                             |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| 12. Number of men, women, and children employed, and average wages of each class?                                                                                                                                                                                                                                                          | 12. In oil mill, two men; in bark mill, ten men; raising and delivering iron ore, sixty men and boys; average wages, \$14 per month. |
| 13. How many hours a day employed, and what portion of the year?                                                                                                                                                                                                                                                                           | 13. Employed ten hours in the day; ten months in the year.                                                                           |
| 14. Rate of wages of similar classes otherwise employed in the same State and county; in other States; and in foreign countries?                                                                                                                                                                                                           | 14. Can't say.                                                                                                                       |
| 15. Number of horses or other animals employed?                                                                                                                                                                                                                                                                                            | 15. Delivering the ore, 50 horses, 60 yoke oxen.                                                                                     |
| 16. Whether the manufactures find a market at the manufactory? If not, how far they are sent to a market?                                                                                                                                                                                                                                  | 16. Oil, to Philadelphia; bark, no sale; ore shipped to New Jersey.                                                                  |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?                                                                                                                                                                                                                 | 17. None except oil; to what extent can't say.                                                                                       |
| 18. Where are the manufactures consumed?                                                                                                                                                                                                                                                                                                   | 18. Mostly in the United States.                                                                                                     |
| 19. Whether any of the manufactures are exported to foreign countries? and if so, where?                                                                                                                                                                                                                                                   | 19. Bark to Russia and to Europe.                                                                                                    |
| 20. Whether the manufacture is sold by the manufacturer for cash? if on credit, at what credit? if bartered, for what?                                                                                                                                                                                                                     | 20. Sold for cash.                                                                                                                   |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate?                                                                                 | 21. Bark and oil decreased ten per cent. in the labor.                                                                               |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                                                                                                       | 22. Bark at \$35½ per ton, oil at \$1 per gallon.                                                                                    |
| 23. What rate of duty is necessary to enable the manufacturer to enter into competition in the home market with similar articles imported?                                                                                                                                                                                                 | 23. On oil 50 per cent.                                                                                                              |
| 24. Is any change necessary in levying or collecting the duty on such articles to prevent fraud?                                                                                                                                                                                                                                           | 24. Can't answer.                                                                                                                    |
| 25. What has been the rate of your profits, annually, for the last three years? and if it be a joint stock company, what dividends have been received, and what portion of the income of the company has been converted into fixed capital, or retained as a fund for contingent or other objects, and therefore not divided out annually? | 25. Twenty-five per cent.                                                                                                            |
| 27. What amount of the agricultural productions of the country is consumed in your establishment, and what amount of other domestic productions?                                                                                                                                                                                           | 27. Agricultural productions, suppose consume \$5,000; domestic \$3,000.                                                             |
| 28. What quantity or amount of manufactures, such as you make, are produced in the United States, and what amount in your own State?                                                                                                                                                                                                       | 28. Can't say.                                                                                                                       |

## DOCUMENT 16.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                              | ANSWERS.                                       |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|
| 29. If the duty upon the foreign manufacture of the kind of goods which you make were reduced to 12½ per cent., with a corresponding reduction on all the imports, would it cause you to abandon your business, or would you continue to manufacture at reduced prices? | 29. Would abandon the crushing of seed to oil. |
| 30. If it would cause you to abandon your business, in what way would you employ your capital?                                                                                                                                                                          | 30. Agriculture.                               |
| 31. Is there any pursuit in which you could engage, from which you could derive greater profits even after a reduction of the import duties to 12½ per cent.?                                                                                                           | 31. Suppose there was.                         |
| 33. Amount of capital; and what proportion the borrowed capital bears to that which is real?                                                                                                                                                                            | 33. None borrowed.                             |
| 40. Average rate of wages?                                                                                                                                                                                                                                              | 40. Twelve dollars per month.                  |

*William Tunnell's Tunnery, Sussex County, Delaware.*

| QUESTIONS.                                                                                                                            | ANSWERS.                                                               |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| 1. State and county in which the manufactory is situated?                                                                             | 1. State of Delaware, Sussex county.                                   |
| 2. Kind or description of the manufactory; and whether water, steam, or other power?                                                  | 2. Tanyard and horse power.                                            |
| 3. When established; and whether a joint stock concern?                                                                               | 3. Established in 1824; individual.                                    |
| 4. Capital invested in ground and buildings, and water power, and in machinery?                                                       | 4. One thousand dollars.                                               |
| 5. Average amount in materials, and in cash for the purchase of materials and payment of wages?                                       | 5. About one thousand dollars, for bark.                               |
| 9. Amount of articles annually manufactured since the establishment of the manufactory? Description, quality, and value of each kind? | 9. Eight hundred Spanish hides; sole leather, principally.             |
| 12. Number of men, women, and children employed; and average wages of each class?                                                     | 12. Two men and one boy; wages for the men, per month, \$26; boy, \$6. |
| 13. How many hours a day employed, and what portion of the year?                                                                      | 13. From sun to sun, and the year round.                               |
| 15. Number of horses or other animals employed?                                                                                       | 15. Two horses.                                                        |
| 16. Whether the manufactures find a market at the manufactory? if not, how far are they sent to a market?                             | 16. Sent to Philadelphia, 120 miles.                                   |
| 17. Whether foreign articles of the like kinds enter into competition with them at such place of sale, and to what extent?            | 17. Can't say.                                                         |
| 18. Where are the manufactures consumed?                                                                                              | 18. All over the United States.                                        |

## DOCUMENT 16.—No. 2—Continued.

| QUESTIONS.                                                                                                                                                                                                                                                 | ANSWERS.                                                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|
| 19. Whether any of the manufactures are exported to foreign countries? and, if so, where?                                                                                                                                                                  | 19. Can't say.                                                            |
| 20. Whether the manufacture is sold by the manufacturer for cash? and if on credit, at what credit? if bartered, for what?                                                                                                                                 | 20. Sold on a credit of four months; barter only for hides at cash price. |
| 21. Whether the cost of the manufactured article (to the manufacturer) has increased or decreased; and how much in each year from the establishment of the manufactory; and whether the increase has been in the materials or the labor, and at what rate? | 21. All increased.                                                        |
| 22. The prices at which the manufactures have been sold by the manufacturer since the establishment?                                                                                                                                                       | 22. Sole leather from 22 to 28 cents per pound.                           |

April 27, 1832.

MY DEAR SIR: I received yours of the 3d, respecting the salt and iron manufactures of Sussex, and should have sooner answered it, but have been waiting to see Col. Waples; though I have not yet met with him. I have seen Wm. Dodd, one of the oldest salt-makers in Rehoboth; he tells me he has made eight or ten hundred bushels himself some years past, but last year there was not more than one thousand bushels made altogether, and none by evaporation, it has all been boiled; and to the south of Indian river he supposes there is about the same number of bushels boiled at present, though a much larger quantity was formerly made at both the situations.

As it respects the leather manufacture, we have two that send leather and get hides via Lewes. One or two considerable tanyards are at Dagborough and Millsborough; also at Georgetown, Laurel, Milton, Northwest Fork, and Milford. The grinding of bark for exportation has been, some years past, carried on to a considerable extent; in consequence of the low price at present, it is almost abandoned. There is, however, one branch of business in Sussex that is, I think, increasing, viz. the building of coasters and shallops for the shingle and stone trade. You will see from my statement, that, except iron, we have nothing to be called manufactures in Sussex, that we had not fifty years ago.

With my best respects to your wife and daughters,

I am your assured friend,

DANIEL RODNEY.

JOSHUA GILPIN, Esq.

## DOCUMENT 16.—No. 3.

*Notes on the history and principles of a Tariff, and of public labor.*

In entering upon the investigation of a tariff, the first object seems to be a clear definition of its meaning.

In a restricted sense, a tariff is no more than a list of duties, but in a more extended one it is defined to be a cartel of commercial regulations, synonymous to a code of laws confined to mercantile purposes.

In either sense it is coeval with commerce itself, and to be traced in its earliest history: indeed, it is obvious that commerce must have required regulations from the outset, and duties have been levied upon it to defray their expenses: further duties, or a part of its profit, would be taken by the State for its general protection, and when commerce became the principal

object, and its profits great, they would be made the resource of the State, and form the most certain and fairest portion of its revenue.

It is obvious that all the duties and regulations of commerce must have had a beneficial or injurious effect upon it, and it is not to be supposed they would be made otherwise than beneficial; hence all laws which respected it would be formed to give it protection, and to extend to all the objects connected with it; most particularly to those that supported it, which were immediately into view the system of protection, and the inquiry as to the objects to which it extended.

Commerce, agriculture, and manufactures, are convenient terms of classification in considering the general labor of a country, and they conveniently represent the forms which labor assumes; but they are not arbitrary, and, like the classification of natural history, such as intermingled as not to be separated. In the human body, though divided into distinct members we cannot admit a system of legs or arms without a reference to the whole; and different applications of labor have throughout a common form in which they must all be viewed, as the joint general labor of the State.

Commerce, in a restricted sense, is no other than the transport or carriage of productions in a more extended one, it comprises the buying, selling, and exchange of them; but even the existence of the productions themselves is essential, for, without them, there can be no commerce: hence all regulations made for the protection of commerce must extend to that which supports it. Now, the productions by which commerce is supplied being those of the different departments of labor, viz. agriculture and manufactures, this brings immediately into view a system of protection to them, and shows that it must have originated with that of commerce.

It is probable that little or no commerce existed before the rude productions of the soil were brought into some more useful form. There are, indeed, some native productions which in their rude state are attractive objects of barter; accordingly, we find gold and silver, diamonds, pearls, spices, perfumes, and native salt, among the articles of the earliest commerce, though slaves, ivory, the fine linen of Egypt, and many others, denote that, even at the earliest period, manufactures existed which furnished articles of superior convenience, and required material for their use. Indeed, it is almost impossible to trace the earliest state of manufactures for the first cutting down a tree implies an existence of them.

The first commercial voyages of which we read were extremely similar to those which the Europeans to have made on our own coasts, and such as are now made to the western coast of America, that is, for the exchange of manufactured articles for native productions against their arts at home. Such were the voyages of the Egyptians and Phœnicians to Greece. A Phœnician trader once resorted to the coast of Argos, and displaying his wares on the shore, he brought the natives to traffic, when, seizing the Princess Io and her attendants, he sold them as slaves in Egypt. Such is the picture of the earliest voyages which the manufacturing nations carried on with Greece, till Greece itself became commercial, and made the settlement of Italy, Gaul, and Spain; where Marseilles, Cadiz, and Lisbon, were established as trading-houses or colonies to barter manufactures for the furs, drugs, and gold, and other articles of the nations.

As this commerce depended on the manufactures at home, and the nations which pursued the best arts for making them gained the most commerce, so their improvement became the object of the utmost attention, and of all the laws necessary to guard or to perfect them.

In some States, as in those of the rocky coasts of Phœnicia, manufactures formed the principal source of commerce; in others, as in Egypt, they combined with and gave value to agricultural productions: the manufactures of Egypt are spoken of from the remotest antiquity in the book of Ezra above seventy articles of manufactures are enumerated as forming the commerce of Tyre and Sidon.

The economical regulations of these States, and of their productions, are to be traced in the earliest records of their commerce itself; and it may be asserted, not only that every great manufacture which has existed in any country has depended upon wise regulations to produce or mature it, but that no great national art has been formed without them: hence laws of protection and improvement are to be found in the codes of Egypt; and the arts of Sidon and Tyre were guarded with the utmost precaution. There seems, indeed, to have been the same rivalry between them and Greece, of the one to retain, and the other to carry away the secret, dye, that now exists for the arts between Europe and ourselves. In the same manner the trees which constituted the wealth of Attica, the commerce of Carthage, the manufactures of Etruria, and the wines of Italy, were all guarded by similar laws; and the Romans, in tending their colonies, dictated with no small precision what each should pursue. In fact, wherever we read of the commerce of the ancients, we find it to be founded on their arts, and these arts protected by all the regulations which are embraced in a tariff.

In the middle ages, Justinian introduced the culture of silk in 555, to Constantinople; and it was retained in the Greek provinces by strict regulations for near six hundred years, until the conquest of Roger, king of Sicily, transplanted both the art and workmen to Italy and France, where it became, and has since constituted, the second great staple of European manufacture. In the same ages, the rich commerce of Venice, Florence, Pisa, Genoa, and the Netherlands—in short, the entire revival of modern industry in Europe, arose from the establishment of manufactures, and the commerce founded upon them, equally guarded by wise regulations.

There is no one occurrence in history that more fully illustrates the manner in which, by the force of encouragement and protection, the whole mass of agricultural, manufacturing, and commercial labor, may be formed into a system of national greatness, than the rise of the wool and wool trade of England. From the remotest period of its history, England abounded in tin, lead, hides, and wool, which were carried away by other nations.

In the middle ages its wool was the great article in which the taxes were paid to its kings, and sold by them to foreigners, who carried it away in their own ships to supply the manufactures of Lombardy, Spain, and Flanders, which were in turn brought back to supply the people of England. There was then, indeed, no commerce or wealth in the kingdom, beyond a bare sale of this valuable article, until Edward III., by the decisive encouragement of foreign artists, and by wholesome regulations, established that manufacture, upon which its commerce began to rise, and the manufacture itself to become the greatest in Europe. Since then the same regulations applied to other native productions, and, above all, within the last fifty years to its iron and coal, have formed them into an immense resource, and eminently increased at once its manufactures and commerce.

A system of regulation for its labor, both internal and external, was begun in France after the reign of Henry IV., (in 1600,) when it had but few manufactures, and no commerce. The fastidious minuteness of this system has been censured, and many of its details now appear absurd, yet from them has resulted the improvement of the silk manufacture, the rise of those of china, tapestry, cloth, iron, soap and wine, by which the native productions of the soil were brought into activity, and created the rich commerce which France possessed before the revolution.

In the same manner we may trace the commerce of Holland, founded at first on its fisheries, and afterwards on the manufactures of itself and its neighbors, until it became one of the greatest commercial States of Europe; and we may take the round of these States as a proof how each, by applying itself to its own features, and cultivating the labor of its own productions by just regulations, has entered the great mart of commerce, and partaken of its benefits.

On the discovery of America, the Europeans who effected it established in their settlements the common feature of making them subservient to the interests at home, and formed all the laws they thought proper for the purpose. The English colonies, before the revolution, were supplied with tariff regulations of every description by England herself, whose laws protected their ships and citizens, and regulated their intercourse with other nations. The system of their labor was restricted to furnish raw materials for the manufactures of England, with which their wants were to be supplied; but they were prohibited from forming those manufactures themselves. The principles, indeed, then taught, were that it was not proper to indulge the colonies in regulating their own labor, but that they should apply themselves to clear their forests, and to pursue their agriculture, leaving manufactures to England itself. It was in vain that the soil of America was found to teem with rich mineral productions, and her woods with objects of manufacture: these, so far as they could furnish raw materials to England, were encouraged, but beyond that the colonists were forbidden to go.

The English system was, however, so loosely understood, and so weakly pursued, that though it produced many severe and absurd restrictions, yet, from the struggles of the colonists, or their adroitness, and the general disposition of England to turn them to account, they were left very much to their own operations, befriended in many instances by useful laws, and protected by those of the British empire: hence there grew up among themselves a very beneficial course of labor, and rapid prosperity.

The history of the British colonies deserves to be studied for many important considerations, but practically for two:—first, as it furnishes the best instance in existence of the manner in which the labor of a people, certainly in the main very free, but as certainly aided by many wholesome laws, became applied to the circumstances around them, and brought into effect the operations of agricultural, manufacturing, and commercial labor, so as to form one great aggregate of the whole, founded on the natural productions and wants of the country; and, secondly, as the best practical instance of public or political economy, to prove how much more the principles of this economy are to be attained by the just study of public labor in each

was reversed, as it required great manufacturing labor and skill to produce it. It is to be noted that cotton is mentioned as an article of export from Carolina so early as 1750, yet this must be considered as a production not realized to any extent before the revolution.

To Carolina was added Georgia—not, however until the middle of the last century; but when added, it was essentially by the same features of labor producing the same objects of commerce.

These constitute the essential application of labor upon which the colonies were founded: in describing them I have purposely omitted many details, in order to judge of them the better in their simple form. In the progress of settlement, however, they became ramified into various shapes by the increase of population, the introduction of new arts, and the discovery of natural productions, upon which these could be exercised: another great feature, therefore, was soon superadded to constitute a sixth important application of labor, that is, manufactures.

Hitherto we have seen manufacturing labor primarily and essentially necessary to give value to the most simple agricultural productions, and to fit them for commerce; in which it will also be seen that, without manufacturing skill, there was scarcely a single production of the waters, the forest, or the soil, which could be exported. But to these, which we may term agricultural manufactures, a second class was immediately added, composed of those essential to build houses and ships, to form the implements of agriculture, and at least common clothing; the uses of which are obvious, and they immediately threw open the door to a further important extension. The shoemaker would encourage the tanner to manufacture the hides of the country; the smith who mended a horse shoe, would be tempted to make them, and to take for the purpose the iron which was discovered on the spot; the conversion of wood into boards naturally led to that of furniture; the furs of the country to the manufacture of hats; and the frugal farmer and housewife would employ the long evenings of winter in converting their wool and flax into cloth. These together bring into view the great class of staple and domestic manufactures which, from the outset, employed a considerable portion of the labor of the colonists, especially of those to whom remoteness of situation, or the want of objects for commerce, rendered them essential. Such was much the case with the thrifty settlers of New England, who became early attentive to their manufactures, not only to clothe themselves, but to produce many articles of traffic with the other colonies, and Massachusetts applied itself very early to those of iron, and others of considerable importance.

It was, however, in Pennsylvania that the greater objects of manufactures were first realized. This colony began, as I have observed, at a later period than most of the rest; was formed by three classes of people, whose varied characters admirably suited the distinct portions of labor. The first of these were the English settlers, and a large proportion of them quakers; the second Dutch or Germans; and the third Irish. The last brought with them few of the arts, but were admirably fitted for the labor of the forest and the field; the English introduced many manufactures, and the Germans still more, for, without entering deeply into the inquiry, it is a fact that the manufactures of England were then less improved than those of the continent.

To her English and German settlers, therefore, Pennsylvania was principally indebted for the introduction of her arts which became conspicuous in the beginning of the last century, and to them are to be traced not only a great improvement of domestic manufactures, but many of a superior class, among which we may reckon paper making, type-founding, and printing, tanning and dressing leather and skins, stockings of excellent fabric, many of the coarse kinds of cutlery and iron ware, glass, carriages, and a variety of others, which became fixed in Pennsylvania, and made it in no small degree an emporium to which the other colonies resorted for many articles of importance.

Upon this basis of productions, the joint effect of agriculture and manufactures, but particularly of the agricultural manufactures, was founded the commerce of the colonies, which soon became extensive, and directed to the following objects:

First, to England itself, from whence the colonies derived their supplies, and through which their productions were transmitted to other countries, at least for many years.

Second, to the West Indies, which proved by far a more beneficial trade than that to England itself, and was actually the first nurse both of the West India and continental colonies.

Third, a contraband trade, which grew out of the last, with the French and Spanish West Indies, in which England herself largely partook. This trade was perhaps in the main the most beneficial one of all, as it largely encouraged the productions of the colonies at home, and supplied them with gold and silver in return.

Fourth, to a trade which was permitted by England with Spain and Portugal, the returns of which were allowed to be made in wines, though for a far greater part they were remitted to England, or brought back in gold and silver.

On the contrary, as early as 1699 a woollen manufacture, probably no more than a domestic one, was denounced, but the growth of raw wool encouraged; in 1731 the making of hats was forbidden; and in an act of 1750 for encouraging pig iron, tilt hammers, slitting, cutting, or plating mills, and the manufacture of steel, are prohibited.

In the returns of 1730 and 1732 the great prosperity of the colonies is set forth. The tobacco of Virginia and Maryland employed 2,400 tons of shipping. Pennsylvania exceeded in white population all the southern colonies together, built 2,000 tons of ships annually, and had a large list of exports in agricultural produce and articles manufactured from it; and the New England colonies, especially Massachusetts, employed 40,000 tons of shipping and 600 vessels in their coasting trade and fisheries. Many curious particulars, however, are now given of the state of labor.

In Massachusetts Bay there had been an act for the encouragement of paper, and a paper-mill erected, which was reported to interfere with the encouragement of the British merchant who imported foreign paper; that great quantities of hats were made, and some of them exported, that all sorts of iron work for shipping was made, and there were six iron furnaces and nineteen forges in New England; that ships were built and sold to the French; that wool and flax cloths were made for their own use in New England, Pennsylvania, and Somerset county, in Maryland. There seems, however, to have been no particular return from Pennsylvania, but it is remarked that there are more trades and manufactures prejudicial to those of England set up in the colonies north of Virginia, for which reason it is proposed to Parliament to increase the encouragement of the colonists to turn their industry to such manufactures of raw material and naval stores as might be of service to England.

The commerce of the colonies may now be considered as of two kinds; first, that of the fair export of their own productions to a large extent in their own ships to the West Indies, Madeira, Spain, Portugal, and the Mediterranean, from which they derived considerable profits and large returns in gold and silver, or bills of exchange: and, secondly, the trade with England, the returns of which comprised what may be termed the *furnishing trade*—that is, the supply of the colonies with all sorts of manufactures, which trade it was that England was so solicitous to monopolize, and made it so much the object of her restrictions. In the middle and northern States this trade was extensively supplanted by their free population, devoted to turn their productions to their own account, and improving them by their agricultural, staple, and domestic manufactures. But to the southward of Pennsylvania, England succeeded fully in her object, and supplied her manufactures, extending to the minutest articles of domestic use; in fact, except in some articles which England could not supply, the intercourse of the southern colonies was more direct with her than with the northern colonies themselves.

The trade with England, and particularly the *furnishing trade*, was chiefly conducted on British capital, that is, the manufactures were shipped by her merchants on credit, and she received the produce of the colonies sent to England; but the furnishing trade required for its return not only all this, but the bills, and gold, and silver, received by the colonies from all their other trade, in fact, the whole value of the exports of the colonies, beyond which there was still a balance due the British merchants; and as it is probable that all the profits acquired by the colonists were vested in improvements, the capital or balance of it constituted actually a standing mortgage to the British merchants, apparently paid every year by the activity of trade, but actually remaining and increasing, probably to the amount of £2,000,000 sterling in 1773, as that appears to have been the value of a year's export from England at the time. It should seem, however, that the excess of exports of Pennsylvania, New York, and New England, then amounted to about £1,000,000, and the excess of imports in Virginia, Maryland, the Carolinas, and Georgia, to £600,000 sterling, as appears by the following table:

|                       | Exports. | Imports. | Excess of Ex-ports. | Of Imports. |
|-----------------------|----------|----------|---------------------|-------------|

It would now be an useless inquiry how far the situation of the colonies would have been better or worse under an entire free trade, but it would not be a dubious one, as there cannot be a question that the protection and support of a powerful empire against enemies who could always have subdued or disturbed them, and who often threatened them, with the benefit of its arts and laws of that empire, constituted exactly that nurse of their strength which was essential to their growth, and effectually accomplished it; they were indeed the children of a paternal parent who supported them, but required and stimulated their aid until the period when separation became advantageous to both.

It would be a very valuable document if we could possess it, which should contain the statistical value of the colonies at the time of the revolution; but, though nothing of the kind exists, there are some data upon which a probable estimate of it may be formed, sufficient, at least, if its principles be adhered to, to continue a relative calculation afterwards. In one published by Mr. Dodsley in 1757, the white population of the colonies is estimated at nearly a million; but either by the authority or for the uses of the first Congress in 1774, its white population was estimated at 3,000,000. At that time the value of the estates of people of the best property, (excepting the great proprietors,) was about \$50,000, and as there was a great equality of condition, perhaps few were worth less than \$100; of these, if we take the white population at 2,000,000, the families at 400,000, and the average valuation of the estates at \$100, would give \$200,000,000 for the aggregate value of the colonies, including real and personal estate. Be this calculation, however, as it may, we cannot but consider the many improvements brought into cultivation, cities and houses erected, and ships and personal property coming, as the proof of a vast aggregate of wealth, formed in the course of little more than a century, by the united efforts of agriculture, manufacturing, and commercial labor, inseparably united: one common whole, exercised with great freedom, but certainly under many regulations.

However advantageous England was to the colonies, their value to her was inestimable, and certainly the basis of her commercial greatness. "Before England had colonies," says a distinguished British writer of the last century, "our general commerce was undoubtedly very inconsiderable." Again—"the American plantations are estimated for the vast number of their people, and the accommodations raised by them for our use, manufactures and exportation, and more especially for the perpetually increasing demand for all kinds of our manufactures, the people and ships, the supply and the bullion they bring in, and it is said the commerce we carry on with our colonies, is so vast as probably to exceed in profit that with all the rest of the world." Sir Josiah Child, in his treatise on the trade of England, observes "that every white man in the colonies gives employ to four at home." In fact, the colonies afforded to England that sure and certain market for her manufactures which enabled her to try every experiment to improve them until they became fitted for the rest of the world. If, therefore, we examine the rise of Manchester, Birmingham, Sheffield, and her other manufacturing towns, we shall find that the first great commencement of their prosperity took place with the opening of the colonies at the beginning of the last century, and that the great part of Liverpool was actually been created by their trade.

It is well known that the first rupture between England and her colonies began with the attempts of her minister, Mr. Grenville, too rigidly to enforce the existing regulations, (which had always been most wisely attempted to their situation,) and new regulations to tax them, the attempts at which had at all times been resisted as an invasion of their rights; but perhaps the best reason may be given for it in the confidence of the colonies to regulate their own labor and govern themselves. One of the first measures of Congress of 1774 was a very bold one, that to get rid of the furnishing trade, or in fact the whole trade of England, by the non-importation, non-consumption, and non-exportation agreement. This was founded on the value of the trade to England, and the resources she derived from it; and it certainly was a measure of severe distress to her, as it deprived her of the debt due from the colonies, which cannot be estimated at less than £1,500,000, of all the revenue derived from the trade, and of the best market for her manufactures before she had acquired others to supply its place, the annual loss of which can perhaps be estimated at less than another £1,500,000 in itself.

But the measure was not without severe distress to the colonies, who were now driven to their own resources for a period of nine years, in which they had to encounter not only the privations of their accustomed labor, but the calamities of war. Their first loss was in one of their commerce and the fisheries, with the lumber trade of the north; then followed the flour and other provisions of the middle States, and of the rice, tobacco, and naval stores of the south; except the supply of the people, and the provisions of the army, a great part of the crops of 1775, 1776, and 1777, perished, and cultivation was extremely reduced.

The stock of foreign manufactures in the country at first was probably equal to one year's

supply, or might be spun out to two; but there was immediately an extraordinary demand for the army, and the supply of many articles of the first necessity was altogether deficient, particularly of military stores, salt and sugars. Of these two last articles the want was for a long time irremediable, the prices became exorbitant, and the consumption diminished, but the want of salt was severely distressing. Of clothing, the stock at first was largely applied to the army and the troops of 1775, particularly, the volunteers of the cities were well supplied, but the supply soon became so exhausted that the sufferings of 1776 were extreme.

In this situation, two circumstances saved the country, viz. its severe economy and its manufacturing labor; both of these were most interestingly impressed by Congress and all public bodies, and eminently supported by the people. Withdrawn from those allurements which the constant change of fashion in foreign manufacture presents to increase their expenses beyond calculation, the time now arrived in which the pride of dresses, furniture, and equipage, became abated, and the best citizens of the country were not ashamed to be seen in clothes of extended use, a patched garment, an overcoat of blanket or of their household manufacture, and it is almost needless to say that the poorer class of people, and the negroes of the south, were supplied in this way by their own hands.

It was now, however, that the value of the existing manufactures, with their improvements, and the introduction of new ones, was felt and encouraged by every public and private exertion. The wants of the army led immediately to those of powder, cannon, and military stores: these therefore became immediately active, and particularly iron in all its shapes, as, also, leather and hats. Of cotton, little was yet grown in the colonies, but it began to be cultivated for domestic uses. The quantity of wool was small, but it was increased by attention; and the growth of hemp and flax, with the manufactures of them, largely encouraged. To these primary articles were added paper, glass, and many others; in short, most of the uses and comforts of life began to receive a decent and beneficial supply before any could be obtained from abroad.

As the war advanced, and particularly after the French alliance of 1778, some markets were opened in France and the West Indies for exports, particularly flour and tobacco, and some supplies were derived by fast sailing vessels and privateers. The trade was attended, however, with so much risk and expense, that the prices were very high; but those obtained for our own produce became most useful in raising the prices at home, and reviving cultivation; and those of foreign supplies stimulated the manufacturer. One beneficial effect of the foreign trade, particularly that of the West Indies, was to supply the country with specie, and to this was added the expenditure of the British army, which insensibly circulated through the country. At the close of the war, therefore, English guineas, French crowns, and Spanish dollars, were in considerable abundance, the fair result of its industry; so that, altogether, the last years of the war furnished an admirable practical lesson of the manner in which a free people may overcome all their disadvantages by a frugal and industrious application of their own labor to their own resources, and creating that best of all enjoyments—their self-dependence.

This self-dependence was indeed one of the most inestimable fruits of the revolution, as it gave the real independence of labor and resource to that of political right, which would have been nugatory without it, and this it effected by confirming the old manufacturing and agricultural labor of the country with the new objects that necessity added to them, to supply the loss of commercial labor for the present, and to lay the best foundation for its pursuit when it revived.

During this period there existed few features of a tariff: Congress indeed established a flag, and gave a national character to our ships where they were admitted, but it had no power to lay duties or regulate commerce; that rested with the several States, and what was done was by them; but little was necessary; it was altogether a period of storm and convulsion, in which war and exigence supplied the place of regulation. The labor of the country was sufficiently protected by the early regulations which had been made, and the high price at which every supply was attained, and duties were not wanted to enhance what necessity so much required.

Some attention to the capital of the country during this period is necessary in considering its labor. That which was due to England existed chiefly in debts of the country to those who owed it abroad, and with those of the people among themselves were either not paid at all, or paid in depreciated paper money, the greater part of it remained in a state of abeyance; the gold and silver of the country was carefully hoarded, or brought out only for the most pressing uses; and the pay of the army and public supplies were made in the depreciated paper until that would no longer serve the purpose, when the private credit of Mr. Morris and some foreign loans supplied its place. Extreme demand and brisk sale seem to have supplied the place of capital until the revival of commerce brought home supplies of gold and silver. During the latter three years of the war the combination of these with foreign loans, and the expendi-

ture of the French and British armies, gave that decent specie capital which I have already mentioned, and to this may be added the operations of the Bank of North America.

Upon the peace of 1783 the United States had to realize the benefits of independence amidst a host of difficulties. Demands for the old British debts immediately revived, and, with those of the country itself, produced a complication of distress, arising from losses during the war, paper payments, and bad laws; and the mass of public debt, at home and abroad, was without resources or a government to form them. Thus much as to the debts of the country: but the old Congress, formed alone for the exigencies of the war, was without energy or sufficient national powers of any kind, and was viewed with jealousy by many of the States, and efficiently supported by none.

In this state the labor of the country was utterly depressed both at home and abroad. Abroad, our ships and seamen had no efficient protection, and were captured by the Barbary powers: they were indeed received by the nations with whom we had treaties, all of whom rapaciously sought our trade for one object, that is, a customer for their manufactures or productions, but gave no encouragement to our own, and shut their colonies against us. Nothing, indeed, was more discouraging than our foreign trade, while a deluge of foreign manufactures poured in from every quarter, but especially from England. The privations of the war, and the fascination of foreign fashions, gave the first import of these in 1783 and 1784 a brisk sale, and payment at the expense of that gold and silver which even the distresses of the war had permitted us to accumulate. But this brought on a fresh inundation from every quarter, for which the country was utterly unable to pay: so that, of the importations of 1785 and 1786 a large part was sunk by foreigners from the extreme depression of prices, and the rest entailed a new debt on the country in addition to the old.

Of our own labor, the whale fishery was taken abroad and realized by France, and the cod fishery scarcely re-appeared for want of demand. The produce of the middle States, their flour and other provisions, and the tobacco, naval stores, rice and indigo of the south, were scarcely ever at so low prices and with so little demand as in 1786. As an important instance, flour was at \$4 per barrel, and this may serve for the rest. The only favorable features of our labor were some clandestine trade with the islands, which grew out of the war, and gave some support to the eastern distilleries, a feeble beginning of the Canton trade, the introduction of the culture of cotton in Carolina, the settlement of the Genesee country, the increase of potash and some other articles of agricultural manufacture, and the maintenance, even under the most depressing circumstances, of the domestic and essential manufactures of Pennsylvania; arising chiefly from two causes—first, the actual inability of the country to buy foreign articles under the depression of its produce, and, secondly, a great increase of the coasting trade and barter of productions, in which the middle States supplied the two extremities with flour, and Pennsylvania with iron and other manufactures, in which she actually became to a considerable extent the same resource for the furnishing trade to the southern States that England had been before.

This period of depression was again one in which no effective tariff existed, for the duties were no more than a scanty resource for momentary purposes, and all the regulations of commerce or of labor together were of little value. It was indeed a period of chance and confusion rather than of any just laws or sound principles, in which the country was hastening to anarchy, until the state of its debts, the feebleness of its government, and the distracted situation of its labor, produced rebellion in some States, and disquiet in all, and at length forced the universal conviction that without a powerful general government the fruits of the revolution would be lost, and the States become the rivals and enemies of each other.

The period in question lasted seven years, that is, from 1783 to 1790, during which the Federal Government was formed and began to impart its happiness to the country, which may be traced step by step almost with magic influence. The establishment of just laws and a powerful judiciary redeemed the debt of the country from the imbecility of State laws, and gave immediate value to property, and funding the national debt confirmed the character of justice to the Government, gave strength to the country at home and abroad, and created what was wanting to all its operations—a powerful capital; but to make this faith and capital efficient, funds were wanting to pay the debt, or interest of it, which could not be furnished by taxation, and had no resource but by reviving the labor of the country and creating a revenue from it, which was accordingly begun by all that protection and regulation which constitutes the features of a tariff. The registering our ships, their papers and protections of their crews, the tonnage duties, and discrimination on them between our own and foreign ships were all regulated in favor of commercial labor; but, to support that labor, the protection of those objects on which it depended was equally necessary, and was effected by imposing duties on imports, and accommodating them to the purpose.

It was in the three sessions of the first Congress of 1789, 1790, and 1791, that all the great measures for organizing the Government were brought forward in succession, and placed, like the well adjusted parts of a building, to form a magnificent whole. In this the establishment and regulations of Congress itself constituted one feature; that of the Judiciary, the Departments of State, Treasury and War, another; naturalization and the census a third; the national debt a fourth; the Bank of the United States, a Mint, and Patent Office, a fifth—all applicable to the Government generally; but the regulations of commerce, with the duties and custom-house, constituted the general tariff.

The duties of the tariff, strictly speaking, were formed by the first efficient act of Congress, dated July 4, 1789, in which the principles for establishing them were thus declared by the preamble: "Whereas it is necessary for the support of Government, for the discharge of the debts of the United States, and the encouragement and protection of manufactures, that duties be laid on goods, wares and merchandize imported;"—and the same is repeated in the act of August 10, 1790, for increasing them. These acts constitute the basis of the tariff duties of the United States, and the principles ever after pursued. Accordingly, they were adjusted from the outset at once to form the revenue and protect the labor of the country in which they were, of course, in some degree experimental as to their items at first, and, with the tonnage and other acts of the same nature, received various modifications to complete their details and to increase the revenue as they did by the act of March 2, 1791.

As if, however, the constitution of the United States was destined not only to realize the blessings of political liberty, but to be the harbinger of an unbounded prosperity, it began and proceeded so much hand in hand with the revolution of France, and those troubles which finally convulsed all Europe, as to derive from them advantages which they would probably never otherwise have obtained. At the end of the year 1788, the produce of the United States seems to have been at its utmost ebb, and flour, which may be taken as one of the best types of it, was as low as four dollars per barrel, yet, from a demand for France, occasioned by the disorganization of its labor, the price of this article rose in 1787 to upwards of five dollars, and the French islands cut off from supplies from home, opened their ports, and gave a market for the provisions of the United States, and soon after for two other important branches of their trade—first, a considerable supply of furnishing manufactures, and, secondly, the return or produce, particularly sugars and coffee, which, first carried to the United States beyond their consumption, were exported to Europe, and began their trade.

In the meantime, the trade to Canton and India become very extensive and profitable, and though conducted with silver, that silver was obtained principally from the islands in return for our produce; and nankeens, India muslins, and teas, were brought home and sent again to the West Indies or Europe, by which they became new objects for the carrying trade.

About this time the settlement of the Genessee country began largely to open those resources which have raised the State of New York to its present eminence. The cultivation of cotton became an object of importance in Carolina and Georgia, and the machinery to manufacture it to constitute a new era in manufactures. These soon caught the attention of the people of these States, and the vigilance of Mr. Hamilton, then Secretary of the Treasury, to turn the manufacture to the best account, and to encourage the growth of cotton by the improvement of its home consumption. Accordingly the import of cotton, which had thus far been obtained from abroad, was subjected to a duty, and some English artists conversant in the new machinery coming into these States were encouraged by the ministers with the influence, though not the participation of Government, to begin their operations, for which the works at Paterson in New Jersey, were formed; previous to which a woollen manufacture had been begun at Hartford, in Connecticut. At this period, it is worth remarking, that the export of cotton from Carolina amounted to 63,500 lbs. per annum.

In December, 1791, Mr. Hamilton, at the requisition of Congress, brought forward his celebrated report on the manufactures of the United States, which was the result of a thorough investigation of them pursued that year by conferences with persons, whether mercantile or manufacturing, who were conversant with them, and employing others in obtaining accurate information of their details. Upon this occasion, a mass of statistical facts and estimates were produced, which are or ought to be among the public records; but much of them is within the recollection of those who were conversant with them at the time, and some facts are represented which it was not within the scope of Mr. Hamilton's report to mention, particularly that the mass of manufactures in Pennsylvania, especially if we include a few adjoining counties of Delaware and New Jersey, exceeded all those of the other States together, and were certainly very important, as also were those of the New England States, through which manufactures were extremely diffused, though in no degree with the great features which they have since assumed.

tion to the affairs of these States since she had lost them, and it did not escape the vigilance of Mr. Pitt what vast resources were to be derived from sharing in the neutral commerce which our States were extending to every quarter of the world, and making England the emporium of it: a sort of tacit division of the neutral trade therefore ensued, which certainly produced great wealth to both countries even under the bad faith with which England maintained it. One effect of the treaty was that the supply of British manufactures was continued, and that large quantities of them were brought to the United States, and re-shipped to other countries.

By the act of June 5, 1794, domestic taxes were laid of 8 cents per lb. on snuff, and two cents on sugar refined in the United States, and additional import duties of 4 cents on manufactured tobacco, 12 on snuff, and 4 on refined sugar, to counteract them: the act, however, was confined to these objects, but the general act of June 7, taken in connection with the preceding acts of 1790 and 1792, form a tariff of duties, which, with the tonnage act, and those for the regulation of commerce, constitute altogether that general tariff which it is now a proper moment to analyze in order to form a just idea of the system of our revenue, and the protection of our labor.

Referring to this, it will be seen that our general commerce was protected by the tonnage of 50 cents on foreign ships against 6 on our own, and the discriminating duty of ten per cent. on imports in foreign ships, by the act for registering our ships, protection of seamen, erecting light-houses and harbors, and establishing the navy; foreign commerce by these, or establishing consulates and intercourse abroad; the carrying trade by the drawback of duties, and the coasting trade by the high tonnage duty on foreign vessels, which amounted to a prohibition of their engaging in it.

The fisheries were protected by their licenses, the tonnage duty on foreign vessels, by the duties on foreign fish oil and spermaceti candles, and a specific bounty given at first on fish exported, afterwards commuted to an annual tonnage bounty of from one to two and a half dollars, with various regulations for the conduct of fishing vessels and the general protection of commerce.

Agriculture was protected by the general duty on non-enumerated articles, and discriminating duties on foreign ships, where these were sufficient, as they were on wheat, rice, tobacco, wool and flour, by specific duties on others, as hemp and cotton, and by the duties on agricultural manufactures.

These agricultural manufactures were protected also by the non-enumerated and discriminating duties which were sufficient; on flour, corn meal, potash, naval stores and lumber, and by specific duties on indigo, malt, beer, cheese, candles, soap, starch, and bounties on salt provisions.

Those which may be termed the old staple and domestic manufactures of the country were protected by specific duties, as ships by tonnage, the home distilleries, and iron, with the larger utensils derived from it, as cannon and anchors, steel, paper, cordage, refined sugar, farming utensils, &c.

The furnishing manufactures, and a variety of others which had sprung from the above, were protected by specific duties, as nails, arms, and a great variety of articles of iron, steel, copper, tin, lead, books, stationery, &c.

The clothing manufactures not having been extensively established beyond domestic articles, were not, as I have already observed, pressed by protecting duties beyond the general ones, except on some articles which were established, as stockings, linens, print and colored cottons, and silks.

For the general protection and encouragement of manufactures, raw materials not furnished in the country, or in sufficient quantities, were made free, such as bullion, copper, tin, sulphur, saltpetre, plaster, hides, skins and furs, rags and dyeing materials, and such as were partially produced in it with sufficient protection, such as cotton, hemp, lead, iron and coals.

The great mass of the revenue was made to depend on those miscellaneous articles of extended use for comfort or luxury, which in all ages and nations have been made the fair objects of taxation, particularly distilled liquors, wines, teas, sugar and molasses, salt, coffee and cocoa, pepper and other spices, foreign fruits, china, and India goods, and the innumerable articles of use, luxury, and fashion, of the furnishing manufactures of Great Britain and the rest of Europe.

If we take the duties in a sectional view, we shall find that the fisheries and distilleries of the eastern States, the wheat flour and other provisions of the middle States, the tobacco of Maryland and Virginia, the naval stores and lumber of North Carolina, and the rice, indigo and cotton of South Carolina and Georgia, with the manufactures and productions of all, command a fair and equal attention, and that the whole system of the tariff was adjusted to the production of

revenue, and the protection and encouragement of the labor of the country, upon compromise of all local views to the general interest and prosperity of the Government, admitting the evident correction and alterations which should be found necessary to adapt for the purpose.

To the few objections which were made against the acts for forming this tariff, it was justly observed that, if revenue only was the object, as the acts must be beneficial to the labor upon which that revenue depended, it must be an object of the first intention to protect and encourage its sources; that as commerce was from the outset an acknowledged object of protection, it could not be otherwise intended than to nourish also the sources of which that depended, and still less intended to draw odious discriminations in labor from the gifts of heaven existing in the richness of the soil above, or its minerals below, or the labors of the plough, the spade, the anvil, and loom; and if it were the object of the congressional powers to provide for the general welfare, it was justly asked how that could be accomplished but by protecting the universal labor on which all depended for happiness, and if the protection was withdrawn, what would remain to which the term welfare could apply.

As this tariff was unquestionably a matter of compromise in which the States accommodated their clashing interests to the general good, it is proper to inquire who and what class were the parties to it, in which we perceive that the western States had then no efficient line of settlements being formed by the Alleghany mountains—but in other respects the interests of the Atlantic States were fairly represented as the fisheries, agriculture and manufactures of the north, and the planting of the south, were all then in powerful operation. Carolina and Georgia, in particular, had at that time the rich staples of rice, indigo, &c. and if these have since so far changed that the two first or either of them have declined, the last become greatly extended, so also have all the features of labor in the north, and the particular rise of cotton itself has been met by an immense extension of the manufacture of that article. It can scarcely be said, therefore, that any important change has occurred in the relative situation of the parties, a circumstance which it may be necessary more particularly to notice hereafter.

As the tariff thus made continued many years with little variation in its items, and as it was in its essential principles, a reference to it may be frequently necessary, for which it is convenient to view it in the tabular form annexed, constituted according to the same already noted.

From the period in question, and under the operation of this tariff, a great scene of improvement continued for the ensuing seven years, during which it is unquestionable that a vast accumulation of wealth was realized by the labor of the country, as will appear from the value of the exports in 1795 to \$47,000,000, and in 1797 to \$57,000,000: it is to be noted, however, that the agricultural and manufacturing interests were improved more by the general protection and the aid furnished to commerce than by any particular bearing in their favor. The failure of the crops in England occasioned the opening of its ports at particular seasons, though they were shut again as soon as its necessities subsided—yet, from this and other circumstances, agricultural products were generally high, but manufactures received no particular encouragement from the existing duties while the country was open to free import from England. The whole force of capital was so much employed in the commerce of the cities that it was scarcely attainable in that permanent form which agriculture and manufactures require. The staple articles of the last, however, entered into commerce, and were shipped to countries which they were unknown before, such as paper, bear, mahogany, more or less manufactured to Calcutta; and in the main, if manufactures did not greatly or decidedly improve, they at least maintained their standing, and they were certainly favored by the unusual high price of British goods during the war.

With respect to the manufactures of the two staple articles of cotton and wool, it may be observed that both began to assume a character beyond that of domestic manufactures, and so far as to increase with improved machinery and producing cloths for sale in the market. Both of them were established in Rhode Island, and cotton mills had found their way as far south as Delaware, where a respectable one was erected on the Brandywine in 1794. The manufactures, as to wool, were founded on the agricultural produce of the country; but as to cotton, there were some circumstances worth reciting: the first cotton mills were founded on foreign cotton from the West Indies, that of South Carolina, if at all in existence, being unknown in the north; so that in the tariff of 1789 the article was admitted as a raw material duty free, and in that of 1790 the duty of three cents was introduced at the instance of the southern gentlemen to protect prospectively an article they expected to realize. It seems that 64 bags were sent to Liverpool, yet so little were appearances in favor of the extension, that Mr. Hamilton, in his report of that year, considers the duty as an impediment.

to the manufacturer, and in 1796 it was complained of in a memorial from the Delaware manufacturers, but retained by the southern interest, when certainly from the high prices of foreign cotton, including the duty and the high prices also, or want of the article, together with the import of British goods, the Delaware manufactures tumbled to dust.

It was to the carrying trade that the force of the country and its capital was now directed, and this literally became extended to all the ports of the earth whose productions were exchanged between them, or brought home and carried again to Europe by an intermingled and almost boundless commerce, which was however exposed to the continual depredations of the belligerent powers, and at length involved us in a war with France in 1798.

During this period, the alterations of the tariff consisted of a duty on printing types, the founding of which was established in the country, of some explanations in other manufactures, and additional duties on molasses, brown sugar, tea, silks and printed linens, by the act of March 3d, 1797; of an additional duty on salt by that of July 8, of the same year; and by the act of May 13, 1800, additional duties on molasses, sugar and wines, with 2½ per cent. on the existing ad valorem duties, in all which the principles of the former tariff are recognized by a correspondent extension of the duties of 10 per cent. on imports in foreign ships, of drawbacks on refined sugar, distilled spirits, fish and salted provisions, and an addition of 33½ per cent. on tonnage bounty on fishing vessels.

Besides these, a domestic duty on carriages was imposed by the act of May 13, 1796, and on stamps by that of July 6, 1798; but on the occurrence of the war with France, it induced the resort to a direct land tax for \$2,000,000 by the act of July 14, 1798, with the various acts of that period for the defence of commerce.

The war, as is well known, lasted but a short time, and cannot be said to have had any material operation upon the exterior or interior labor of the country except its expense, as the French were not then in a state to commit further injuries to either than they had effected under the mask of peace for many years before.

On the recurrence of the peace in Europe in 1801, the situation of the United States became in some degree similar to what it had been on the close of the revolutionary war; or, rather what it will always be on the close of a war in Europe to which it may not be a party—that is, deprived of those adventitious circumstances which the situation of the belligerent powers is compelled to admit. The States had now, however, the advantage over the revolutionary peace in an excellent government, a large capital, and a great increase of its labor. But the nations of Europe, returning to their accustomed habits, and compelled to refit their shattered barks by nursing their resources, shut their ports and resumed their colonies; the carrying trade of the United States ceased, and they were compelled to resort to their own natural commerce founded on their own labor. It was then discernable how large a portion of their recent commercial labor was due to the fortune of war, and until their labor became accommodated to the habits of peace, the scene was a distressing one, of ships decaying in port, real property depreciated, the agricultural products reduced, and the large capital of the country unemployed.

It is unnecessary, however, to dwell upon the scene, as the renewal of the war in Europe made it of short continuance, and opened the carrying trade with all the advantages the United States had enjoyed before. It was not opened, however, to unmingled enjoyment, for, though it remained in some degree unmolested for the first three years, that is to 1804, yet, by degrees, all the circumstances which had occurred to harass it, returned with double force. We had, indeed, made a treaty with France, but it was soon found to be no peace; and England viewed the commerce we enjoyed only as a golden fleece, which no one but herself should be permitted to shear or possess. There now occurred indeed a period in which voyages to the Isle of France, Batavia, India, Canton, Manilla, and in fact every port of the eastern as well as western world, brought home their rich productions to be sent again to Europe, but liable in all their progress to be seized and pillaged under every circumstance of an insulting and disguised war.

This period lasted for five years, until it brought on those acts of public vindication and defence which were comprehended in the embargo and non-intercourse acts—in fact, in the measures of 1807, and subsequently, on which a few reflections may give a correct idea of their operation upon our system of labor.

It is well known that the republican party of the country, long sufficiently designated, had at all times been the distinguished, I will not say the exclusive supporters of that system of labor which had more immediately the object of improving our domestic labor, and promoting the self-dependance of the country. In this respect Mr. Madison had, in the first Congress, been the great leader of the tariff of July 4th, 1789, openly and unequivocally establishing the protection of manufactures as an important feature of the revenue laws. The sentiments of Mr.

Jefferson on this head are well known as adverse to the system of foreign intercourse or connexion altogether; and though his ideas changed in latter life as to commerce, they never changed as to the management of the domestic labor and self-dependance of the country, which was the great object of his life. In fact, no administration had admitted an idea of acting otherwise; on the contrary, our manufactures and agriculture were, as we have seen, the great objects of the Washington and Adams's administrations, and the rise of them had unquestionably a powerful influence in promoting our commerce under all the difficulties, hostilities, and expense, which had embarrassed it. It had, however, certainly been seen that our commerce, and particularly the carrying trade, formed the tangible point to involve us with other nations, and that, lucrative as it was, it had been the immediate cause of the difficulties and expense of the country; so that it had become an object of calculation how far its benefits should be prolonged at this expense, and what was the balance in its favor, which, under the conduct of the belligerents, lessened every day, with the prospect of being reversed, and in fact losing all that they had gained by it.

Other circumstances, however, came into operation after 1804—that is, the just protection of our citizens on the seas, and the insults of our ships, coasts and harbors, which left no alternative to a government justly mindful of the rights or character of the country. There is no question but the conduct of both the belligerents had become such as to leave the Government justified in attacking either or both, according to its own interests; but as war, in all its shapes, was to be avoided, if possible, for these interests themselves, the measures adopted, including the embargo and non intercourse acts, seemed to be a recurrence to the spirit and principles of our fathers in 1775, not unlikely to produce in the end the same beneficial result, and though, with some intermediate sacrifice, yet far less than that of war.

It is well known that the consequence of it was an arrest of our commercial labor, and that it was felt by the other departments of that labor in a manner that the injury to one will ever affect the whole; that it should ensure the application of capital to domestic objects, may be supposed, and was certainly the fact; but there was one circumstance which limited this, that is, the continual expectation of adjustment, during which the carrying trade was viewed like the sun in a clouded atmosphere, ready again to burst forth.

The want of precise statistical documents prevents our speaking with precision as to the number of manufacturing establishments formed during the embargo period. It seems certain that the old manufactures maintained themselves and increased, and of the new, (particularly cotton) it is said in a report of the committee of Congress of February 13, 1816, that prior to 1806 and 1807, establishments for manufacturing cotton had not been attempted but in a few instances and on a limited scale; yet it is quoted in the same document that the manufacture of cotton had increased from 500 bales in 1800 to 1000 in 1805, and from this time it increased most rapidly, as it was 10,000 in 1810.

In the meantime, an immense increase in the importance of the Union occurred by the organization of the western States—that is, Indiana as a Territory in 1800, and Ohio as a State in 1802, with a population of 70,000, by the purchase of Louisiana in 1803; which at once increased with a magic influence the territory of the United States, and brought new interests into view. Of the produce of these States, and the consequence likely to arise from them, we may observe that of Ohio, and probably of Indiana, to be very similar to the middle States of Pennsylvania and New-York, that is, of flour and other provisions, with hemp, flax, and some tobacco; Kentucky not dissimilar, but with a larger proportion of tobacco, hemp and flax, and Tennessee with a larger proportion of cotton. There was, therefore, something in the produce of these to assimilate them both to the middle and southern States. But Louisiana opened new objects of incalculable importance, the first of which was its rich mine of southern produce, particularly the great agricultural manufacture of sugar; and, secondly, the outlet it gave to the western States, and, in fact, the whole Union; the first of these was an article nearly of necessity for which the United States had been heretofore dependant on foreigners, but now nourished on their own soil, and the second shut out her territory from intrusion which forever would have marred her peace, and secured to them a vast and peaceful domain.

As if nothing should be wanting to complete this acquisition, the invention of steamboats by our immortal countryman Fulton occurred at a period so fortunate that we are compelled to acknowledge the finger of Providence in this, no less than in the improvement of the compass originally to guide to our shores. To these most timely discoveries our country owes its existence in the circle of civilized nations and its greatness; but it is impossible in the history of its labor not to consider with attention the immense effects of the steamboat; as a locomotive or labor-saving machine it is not only pre-eminent in itself, but, as it admirably explains the application of every other to our particular situation, we may justly ask and reflect in what manner and in what length of time our immense western waters, with the wide compass of our lakes, would have been ascended, and the vast area of our country opened, familiarized, and

united, by any of the means formerly in existence? And without stopping to fix the principles of an exact calculation, if we suppose as many goods now to be carried up the Mississippi by one man, as formerly by ten, we perceive that, in this respect at least, we have increased the force of our population from 13,000,000 to 130,000,000, and have probably anticipated a century in the improvement of our country in point of time.

No circumstance more clearly dispels the idea of our want of population for labor, and the absurdity of binding it to the clearing of forests and pursuits of agriculture, (still the theme of every British factor.) Is not our country settled, cleared, and cultivated, almost with the swiftness of a whirlwind; and productions of every description furnished as fast as means can be found to use them? No sooner is any art developed in Europe than, with the keenness and genius which our freedom inspires, it is taken up, improved, and applied to our situation upon a scale of magnitude and success that mocks all calculation. The great cause of this unquestionably arises from the total reverse of our situation to that of Europe: there, where an overplus of population requires bread, and every means of employment to obtain it, the result of machines is to rob the people of that employ, and devote them to misery. With us, machines supply the want of population, and furnish all that manufactures require, without taking from agriculture or our forests those who are to cultivate or settle them; while, in turn, the rapidity of our communications, and the immense increase of production, ensures plenty, and furnishes every sort of supply. In fact, we may perceive that our manufacturing population has become as essential to the progress of settlement westward, by furnishing it with necessaries, as by consuming its produce.

Such was the situation opened by our western country, and the means of supplying it, which together form a new era in the history of our labor, from whence our country, its government, laws, and improvements, all moved on a broader basis, and with features immensely extended.

Among the objects of the western country, though of inferior magnitude, we may notice the acquisition of coal, saltpetre and lead, in inexhaustible quantities, and probably many other minerals. Salt, which from the first settlement of the Genessee country furnished the interior of the country an immense extension of the fur trade, and the commencement of a trade with the Spanish provinces.

About the period in question some acts are to be noticed of an economical nature, such as will probably be required at every session of Congress, to modify the tariff to existing circumstances. By the act of March 27th, 1804, intended for the benefit of the manufacturers, a variety of raw materials, such as rags, bristles, regulus of antimony, clay, &c. are placed among the free goods, the duties raised on fish, cordage and many iron articles, powder, &c. and a light money of 50 cents per ton on foreign ships. By an act of March 3d, 1807, for continuing the Mediterranean fund, the duty on salt was repealed.

In the year 1810 we have for the first time some regular statistical documents of the manufactures of the United States, or rather an attempt to form them by the act of May 1st, which directed the marshals to collect them; but this duty, which, if ever performed with accuracy, would go far to put an end to misconception on the subject, was so miserably executed as to furnish no idea of the general state of public labor that can be termed exact, though it abounds in many valuable partial statements. It is said to have been tolerably executed in Massachusetts, Connecticut, New York, Pennsylvania and Virginia, but scantily in many cases even in them, and, as the errors are on the side of omissions, it of course falls short of the actual manufactures; yet from the enumeration, such as it is, we find the manufactures then very important, as the following items will show:

|                 |   |         |                                 |
|-----------------|---|---------|---------------------------------|
| Wool and cotton | - | 1,776   | carding machines                |
| "               |   | 1,682   | fulling mills                   |
| "               |   | 122,647 | spindles                        |
| "               |   | 325,392 | looms                           |
| Iron            | - | 153     | furnaces, producing 54,000 tons |
| "               |   | 330     | forges, " 24,500 bar iron       |
| "               |   | 316     | trip hammers                    |
| "               |   | 34      | rolling and slitting mills      |
| "               |   | 440     | naileries                       |
| Paper           | - | 179     | paper mills                     |
| Leather         | - | 4,316   | tanneries                       |
| Oil             | - | 393     | oil mills                       |
| Gunpowder       | - | 208     | gunpowder mills                 |

## DOCUMENT 16.—No. 3—Continued.

|                |                      |
|----------------|----------------------|
| Distilleries   | 141,191 distilleries |
| Breweries      | 132 breweries        |
| Sugar refining | 33 sugar refineries  |
| Glass          | 22 glass works       |
| Potteries      | 194 potteries        |
| Snuff          | 82 snuff mills       |

The value of various manufactures returned, stands thus in round numbers :

|                                                                                 |              |                    |
|---------------------------------------------------------------------------------|--------------|--------------------|
| Clothing manufactures of the five articles of cotton, wool, flax, hemp and silk | \$45,500,000 |                    |
| Hats                                                                            | 4,300,000    | 50,800,000         |
| Cordage                                                                         |              | 4,200,000          |
| Iron                                                                            |              | 14,300,000         |
| Other metals                                                                    |              | 2,700,000          |
| Leather                                                                         |              | 18,000,000         |
| Paper                                                                           |              | 2,000,000          |
| Glass                                                                           |              | 1,000,000          |
| Soap, candles; and whale oil                                                    |              | 1,700,000          |
| Distilled liquors, and other manufactures of grain,                             |              | 17,500,000         |
| Wood manufactures                                                               |              | 5,500,000          |
| Marble and stone ware                                                           |              | 500,000            |
| Earthen ware                                                                    |              | 200,000            |
| Refined sugar                                                                   |              | 1,500,000          |
| Various miscellaneous articles                                                  |              | 8,500,000          |
|                                                                                 |              | <b>128,300,000</b> |

This, as will be seen, included not the agricultural manufactures, such as flour, salted provisions, potash, &c. and is deficient in the amount of others, so that it gives quite a diminished view of the manufactures of the United States generally, yet it shows that, in the main, they were highly important, and it is of the more consequence to have the view of them such as it is at this period, as we are on the point of entering on one of far more importance.

There continued throughout the years of 1810 and 1811 a considerable improvement in manufactures arising from the disturbed state of public affairs and the appearance of a war, the diminution of commerce and want of employment for capital, and also from many other preparatory circumstances, particularly the increase of wool by our agriculture, the continued arrival of merino sheep, and large importations of merino wool during the war in Spain. All these gave a spirited beginning to the woollen manufacture; indeed, the supply of raw materials now furnished by agriculture, especially of cotton and wool, formed a just preparation for what soon followed, that is the establishment of our manufactures upon an extended basis, stimulated by the war with England.

This war, without entering deeply into its political features, was in point of fact no other than the consummation of the existing quarrels with England, engendered by her hostility to our carrying trade, of which it may be said that its very prosperity brought on its destruction, and that it actually involved every other department of labor in expenses which they were obliged to supply. It is certain, however, that if ever a war was necessary to the character of a country, this was so: from the long forbearance of the United States they had come to be considered in Europe as a race of mercantile speculators whose only object was gain, for which they would submit to every insult without the power or courage to resent it; this was particularly obnoxious to both the belligerent powers, who were in a high state of military irritation against each other, and viewed with contempt those who were not impressed with it. If, therefore, in this situation, the war had closed upon the scene of provocation without a struggle to repel it, such a character would probably have been fixed on the United States as it would have been difficult to remove, and such as would have formed the immediate principle of action in any future war.

With respect to our domestic labor and our manufactures in particular, it will be seen that, while all the fortunate circumstances of the war thus far had been enjoyed by our commercial labor, this was the first instance in which the turns of fortune had thrown any particular advantages upon our manufactures. Now, however, this department of labor, in conjunction with agriculture, rose to the actual support of the country, under the absolute decline of commerce, the fisheries, and all that required exterior support or co-operation.

The manufactures begun on the declaration of war in 1812 may be considered chiefly as a

rapid extension of those which had existed before—that is, as to the objects of them, and they were bent to the immediate support of the country from the following direct causes:

First—Its necessary wants, which now became extensive and pressing.

Second—Its deprivation of foreign supplies.

Third—The large unemployed capital and labor of the country.

Fourth—The duties, which were immediately doubled.

It is, however, unnecessary to mention the latter, as the wants of the country, and other means of supplying it, operated beyond all duties, or, in fact, all other protection.

What was the exact number of manufactures established during the war, and their product, it is impossible to mention in detail for want of documents, and it would be very uncertain to describe them from conjecture: it is certain, however, that most active and spirited exertions immediately ensued. One manufactory on the Brandywine, begun in June, 1812, produced excellent superfine cloth for sale in the following December; in fact, a prodigious extension of them, an investment of capital took place through the years 1812, 1813, 1814 and 1815, for a period altogether of three years, during which the idea of a war with England, the only country from which competition was to be feared, was powerfully operative; and of this war the prospect of a long continuance was confirmed by the conferences of Ghent almost to the moment of peace. The stimulus for manufacturing establishments, therefore, was powerful and continued, and to those erected at first, upon the exigencies of the moment, larger and more improved ones were added, with the completest imitations of European machinery.

It is extremely well known that the manufactures furnished a large quantity of most useful articles for the country, and that, although perfection could scarcely be expected at first, superfine cloths were made equal to any imported. It has been objected that the prices were very high, and that the manufacturers showed a disposition to press upon the wants of the country: this, however, is incorrect in point of fact, and as far as high prices existed, they arose from other causes. The prices were actually first raised by those who had foreign goods on the breaking out of the war, or obtained them afterwards. It is a well known fact, that on the intelligence of the war with England, the British Government permitted the return of our ships with large supplies, but this did not prevent their capture in our own ports by our own armed vessels, and when the articles came into the market, they were sold at enormous prices without imputation on the merchants who raised them.

The manufacturer, however, had not only this rise of price before him, but the circumstances occasioned an immediate rise of the raw material; merino wool soon increased from 90 cents to \$3 per lb., and cotton to 30 cents, so that agriculture obtained the first great benefit of the advance; besides, the cost of the establishments were throughout extremely high, and the peace came on before the market had been reduced by competition, which would have been the certain effect of the numerous establishments.

The clothing manufactures have been much dwelt upon in speaking of the establishments generally, but the same circumstances apply to all other articles of necessity, except indeed a few which were injured by the war, particularly paper, which declined far want of the usual consumption of business, letters having so far lessened that the post office did not pay its expenses.

It is unnecessary now to dwell upon the detail of manufactures during the war, for they are much within general recollection; and a few features of them will revive all that is necessary. It is notorious that a vast portion of the capital and application of the country became invested in them, that it most eminently supplied its wants, that it kept alive the productive labor and wealth of the country when every other means had failed, and that it constituted a most important branch of private and public investment.

It seems unnecessary, also, to dwell upon the tariff regulations during the war, as most of them became inactive with commerce itself, and others were altogether of a temporary nature. It is, however, correct to observe, that although induced most particularly in support of our commercial labor, the resources from that altogether failing, the war had to depend on other means—that is, upon direct taxes on land to the amount, first, of \$3,000,000, and, secondly, of \$6,000,000, and upon carriages, licenses for selling goods, sales at auction, and on the manufactures of refined sugar, distilleries and paper, and, lastly, upon the war loans.

When the short period in which our more extensive manufactures thus rose and had to flourish is considered, it is useful to reflect what aid and comfort they gave to the country at the time, and what a prospect they opened for its support; nor is it possible for any candid mind to withhold a just allowance for irregularity that might appear at the conjuncture, which was little in point of fact, and was rapidly subsiding into a state of order that promised the most permanent benefit to the country. One great lesson was certainly taught—that is,

how important it is to nourish these domestic resources upon which war itself must depend when it occurs.

Upon the peace of 1815, Europe and the United States returned to a situation which the existing generation had scarcely ever known. Europe, after a war of twenty-five years, in which all her ancient institutions were destroyed or changed, had to remodel her situation to a state of peace, in effecting which a general convulsion in her system of labor, economy, and finances, occurred, before her peace system was established.

In this situation no country sooner retrieved its prosperity than France itself; the tremendous interdicts of Napoleon against the commerce of England are well known, and they were founded on a knowledge that it impaired his resources, but he nursed the domestic arts of his country, and brought them to the supply of his armies and people, and to form one of the finest models of a self-dependant State, cultivating its agriculture, and forming its productions by manufacture into every sort of resource, without exterior aid. France has never been deemed a manufacturing country, but it was now found to possess some of the richest in Europe: its silk, as an institution of manufacture, turning to effect the produce of the soil, was, perhaps, taken altogether, unrivalled; its cloths, cutlery, glass, porcelain, were at least among the best in Europe, and when a return of peace opened a free exhibition of its cotton manufactures to England, the artists of Manchester were astonished to find them of an excellence which they had not attained, and the establishments of Rouen superior in magnitude to their own.

The same circumstances attended the states of Germany which had always depended upon their agriculture, and excellent manufactures of cloth, linen, iron, glass, and in fact every article of domestic use, without the aid of commerce, or supporting that commerce otherwise than with the surplus of their productions.

Perhaps none of the States of Europe had a greater struggle to place itself in a state of fixed prosperity on the return of peace than England itself. Though stored with the wealth of the world, acquired during the war, its situation had become so complex that the movements of every other State to regain its lost establishments disturbed it, and, above all, its manufactures multiplied, as they have become in some way or other affected by the accidents and even the prosperity of all mankind, so as to compel the nation actually to be in a state of war with every other country, not, it is true, of arms, but that of supplanting their arts by every stratagem it can use.

In the struggles of Europe to regain its prosperity, it is necessary to notice two important circumstances: first, the almost total exclusion of American produce, so at least as to admit it only under the pressure of rigid necessity; and, secondly, an equally universal desire to make the United States the receptacle of its arts. Perhaps no nation, considering the extent of its trade with them, offers less reciprocity than England, arising indeed from the necessity of cultivating every resource for itself or its numerous colonies, whom it nourishes by every means in its power to supplant the United States in the raw materials it is obliged to take from them; and it is thus that every means are used to rival our great staple of cotton, the only one of importance England now takes from us.

Since manufactures have become, as they are, so important an object of commerce and national industry, it is proper to notice one feature of them which operates most powerfully upon those States who do not make at least the most useful ones themselves, that is their quality, in which there is a most important distinction in Europe between those made for domestic use and those for sale: the first of these is generally excellent, such as the cloths, prints, and most other manufactures of France and the continent, which, whether coarse or fine, are of substantial quality, but too high to be sent abroad where articles made for sale are interposed. No nation understands this distinction or has turned it to more account than England, where every article for domestic use is made in different towns, of different materials, and of excellent quality, but too high to be sent abroad, while, in the mercantile manufactures of Birmingham, Sheffield, Manchester, and Leeds, every artifice is used to form articles of seducing cheapness. Hence it is that we have cast iron cutlery, false dyes, and cloths of the most flimsy texture, which, with the fascinating and half yearly change of fashion, are infused, by every possible stratagem at once to sap the wealth and destroy the rising germ of arts in every country that does not watch and defeat this hostility to its institutions, of which, above all others, the United States are the object.

Among the means resorted to by England to revive her prosperity, the measures of the late Mr. Huskisson for some time gave an idea of opening a free trade, and attracted the attention of those who were disposed to favor it. On examining these measures, however, they neither went, nor were intended to go, beyond those useful changes in its tariff which at every session of Parliament the British minister finds it necessary to make for the double purpose of finance

and regulation of its labor: such as they were, they were considered by the ablest statesmen as among the innovations of the day, and of very dubious character; but in their utmost extent they were but as a drop in a bucket to the vast system of British restrictions. If, however, under the idea of opening a free trade, other States could be so deluded as to throw down the barrier of their useful restrictions, no opportunity could be so desirable to Great Britain, who, by her immense capital, and the overpowering state of her arts, is of all nations the one to inculcate free trade to the rest of the world, and establish a universal pre-eminence by its means.

Such are a few of the measures of Europe to regain its former situation since the last peace, to which it is merely necessary to add, that those who had colonies remaining have turned again to nourish them and their own trade by excluding other States, and shutting their ports at home, except when a strict calculation of their interests opens them to other nations. All, however, have turned with one accord to nourish their domestic resources by their agriculture, increasing its products by manufactures, abstaining from a wasteful introduction of foreign articles, and supporting their commerce upon the basis of their surplus productions; in fact, by a system of labor of one common feature and effect, by which it is most certainly that the States of Europe have repaired the waste of war, and restored themselves to a flourishing situation.

The United States had to encounter the same difficulties as the States of Europe in returning to a peace establishment. Their carrying trade had ceased with the adventitious circumstances that gave it birth: it sunk, therefore, without the hope of a revival, yet it left behind impressions on the race of merchants who had been enriched by it, which have had a powerful effect on the consideration of our commerce ever since, that it is this trade which actually constitutes that commerce properly speaking, and that it ought to be the great object of our labor. Such certainly is the impression of our cities, even in preference to our coasting trade, or in fact all other trade but one—that is the direct trade to England for her manufactures; and though these impressions cannot be avowed, they are too discernible not to be felt. Our legitimate general commerce indeed opened again with a great extension of surface and ports, but with the universal rivalry of the whole world, particularly England with her innumerable objects to support it, against the few we have had to furnish.

Our commerce, therefore, remained inefficient for want of objects to renew it, and so did our fisheries, in fact all our exterior labor. At home, agriculture was universally depressed for want of markets, and with it real estates of every description declined, and the whole system of our money and capital became deranged. In this situation a very deplorable inattention occurred towards our domestic labor, amounting to almost a spirit of hostility against our manufacturing establishments, that they had not, under the extortions of importers and their own enormous expenses, kept down the prices of goods during the war, even before there was a possibility of maturing their own operations. Immediately on the peace the war duties were repealed, and the tariff of April, 1816, established; but in the meantime an immense import of British manufactures coming in, with all the fascinations of cheapness, overpowered all the institutions of our domestic labor, and they fell with the rest.

The importations of 1815 and 1816 are stated at \$240,000,000, and the exports of the United States at \$135,000,000, leaving a balance of \$105,000,000, which, whatever may be said on the subject, had to be paid, and produced an immediate drain of specie, the distress of which was, as it ever will be, directly felt by every class of the community in the stoppage of the bank accommodations, the scarcity of money, and universal embarrassment.

This was deplorably felt in every State of the Union, and in none was it more loudly complained of than in the southern States, for its just and actual cause independent of all tariff regulations, which were not then adduced as its cause, nor was there indeed any cause to complain of them. It is well known that the high prices which England paid for South Carolina cotton, especially the Sea Island, and the uncertainty of supply in case of a rupture such as that of the war, induced her to encourage the cotton of Brazil, and to use her utmost exertions to raise it in India. The effect of this came into operation in 1818 and 1819, when the Brazil cotton was found no bad substitute for Sea Island, and though the India cotton was inferior to that of the United States, yet it effected the great purposes of England to reduce the price of American cotton, and to offer a resource in case of difficulty with the United States on which she could rely, and probably overcome the disadvantage of quality by her arts. The reduction of the price of cotton, however, by these means, was the first circumstance which reduced its value to the southern planters, and united as it became with the immense cultivation of the article, it appears at once the real cause of southern distress, and the best lesson in favor of a home market.

The general distress of the country cannot be better described than in the report of Mr. Crawford, Secretary of the Treasury, in February, 1890, in this brief sentence—"Few examples have occurred of a distress so general and so severe as that which has occurred in the United States." And it would seem that this was the opinion of the southern gentlemen generally, as in 1823 when this distress had attained an extreme point, it is so represented by Mr. Drayton and others in a memorial to Congress, in which it is said that the cultivation of cotton had been so prodigiously extended in South Carolina and other States, as well as in other countries, that, notwithstanding the unprecedented increase of the trade with England, every market in Europe was glutted with it.

These appear to be the actual causes of distress in the southern States, and as we proceed northward the same cause may be applied to every State and every article of produce in succession. Commerce had no obstacle but what arose from its own situation, and wanted no protection that it could not command; but the universal resumption of it by other nations, and the actual want of markets abroad, palsied or destroyed equally our shipping and navigation, and the naval stores, lumber, tobacco, provisions and fisheries, from south to north, all felt indeed the deadly hand of distress as to commercial and agricultural labor, which fell also with tremendous weight upon the institutions of domestic labor in which so vast an amount of the wealth of the country had been so recently invested. Nearly all the manufacturing establishments of the country were broken up, their owners ruined, and the property sold at enormous sacrifices: it may be said indeed that nearly the whole of these establishments changed owners, and were taken up at successive abandonments and reductions of capital, all which however proved but successive steps to ruin.

Against this domestic source of distress there seemed a remedy more feasible than any other, for if we could not command the conduct of other nations in reviving our trade abroad, we could at least follow their example in repelling their influence upon our institutions at home, and hence the people justly resorted to the Government for protection on those points in which remedy seemed in its power. Accordingly, the appeal to the Government produced the tariffs of 1894 and 1898, which were successive experiments to arrest the injurious operations of other States, particularly the inundation of British manufactures, and to preserve at once our manufacturing establishments, the agriculture which depended on them, and the exhausting drain of capital and wealth.

Our revival from distress, however, though it has most certainly been aided by the acts of Congress, has mainly depended upon the industry and enterprise of the people, and the opportunity for exercising it. Perhaps it may be said to have depended more upon population than any other cause; the operations of the tariff seems to have been more active, and succeeded at a lower rate in the northern States, which have the largest and most active population, and to have gone progressively south; that is, the revival of a prosperous state of labor seems to have been more easy, more effectual, and at lower rates of tariff in the northern, middle, and western States, than in the southern, where, however, if more slow, the effect seems equally certain in the end, since the rich productions of the south must command enterprise from every other quarter; and it is but just to remark that it did feel its influence to a great extent in the high prices of its produce during the war, when other markets were abated.

To the cause of population we must add the operation of local circumstances and opportunity. In the southern States their rich soil gives in one direct object what is to be sought for in the northern States in many, and of course by more enterprise and variety of applications and labor. These circumstances indeed have dictated to the several States the means of relieving their distress, and the points to which the benefit of regulations could be applied; in fact, as immense deal has depended on mineral productions, mill seats, and the agricultural productions of a hardy soil.

Taking Pennsylvania as a type of the northern district, these circumstances have always commanded the application of her labor, and now more than ever, since, of all her agricultural productions, she has scarcely one that can be sent to a foreign market, but at a price at once depressing to her commerce and agriculture. Necessity, therefore, has compelled her to change her commercial character, and apply her vast capital to her internal resources as a great manufacturing State, which is now undoubtedly her true character, becoming more confirmed every day from her immense stores of coal, iron, and other raw materials.

But Pennsylvania is but one of the great mass of the northern, eastern, middle, and western States, whose population and productions are of the same character, and dictate the same employments; nor can it be denied that the progress of population southward is rapidly extending the same enterprise, and infusing the same domestic industry to all the objects of the south, either directly on the spot, or by bringing them to the points where enterprise can be

come successfully exercised, so that the south is becoming more and more comprised in the circle of domestic employment.

In the meantime there has certainly been no want of encouragement or protection to commercial enterprise, of which the port of New York is an eminent instance to show how, on the decline of the adventitious circumstances of the war, commerce had been resuscitated by an immense coasting trade, and such foreign trade as our intercourse abroad admits.

I have mentioned the tariff of April, 1816, the first general one after the war giving protecting duties to woollen and cotton cloths of 25 per cent., hempen 20, salt 20 cents per bushel, and iron 45 cents per cwt., and by the acts of April 20th, 1818, iron was raised to 75 cents. All these were in the same spirit of protection; but they failed from their insufficiency, and occasioned the tariff of May 22d, 1824, which was general as to the protections then claimed, and effectual as to some; not so however as to many, which led to the tariff of 1828.

A considerable revival of the manufactures seems to have followed the tariff of 1824, especially in the eastern States; but that of 1828 appears to have been thoroughly effectual, and for the last few years there has certainly been an universal revival of labor in all its forms, on the best of all basis, that is a moderate price of land, labor and produce, rewarding the natural industry of the country without any foreign adventitious aid. In this way the fisheries, especially the whale fishery, has become prodigiously active, and with it a rich scope of enterprising commerce formed without injury to other institutions of the country. The town of New Bedford, the great seat of this trade, though founded in the revolutionary war, is the next in extent of tonnage to New York, and is also distinguished for its manufacturing establishments. New York possesses a commerce founded at once on the coasting and foreign trade, which certainly has no impediment to its increase. The produce of the middle States, though low and destitute of foreign markets, is at prices which moderately pay the farmer, but agriculture receives its best support actually from the manufacturing establishments. The quantity of sheep is estimated at 20,000,000, valued at \$40,000,000, and every manufacturing district is distinguished by its agricultural improvements. Of the southern produce, that of Virginia and North Carolina is at least upon the same footing as that of the middle States, and the sugars of Louisiana have attained the surest of all markets in the consumption of the country: this is also rapidly rising to the support of cotton by the increase of the manufactures, which seem to open an unbounded increase of the article in every shape for home consumption, with no small prospect of diffusing them to great extent abroad.

To this state of the country we may add the energy and vigilance of an excellent administration, which has already explored and remedied most of the entangled interests of the country, and is devoted to restore and establish them all with a vigorous and masterly exertion.

In this flourishing situation it would almost seem that we might leave the institutions of our labor under the parental care of the Government for time to mature their prosperity, but since the prospect for extinction of the national debt, and the wishes or complaints of a large portion of the people point to their consideration, it is but just that they should receive that attention to which the measures of Government are at all times entitled, and the respect which is certainly due to the representations of an important part of the people.

With respect to the constitutional doubt on the subject of the tariff, it may be observed that it has now become so much the practice to start this difficulty upon almost every public measure, and to make it the ground of opposition to the Government when no other exists, that it should seem the most necessary preliminary step to settle some test for adjusting this great question itself, in which it should appear that we cannot act more safely than by following that course which has perfected the fabric of our laws and almost every other institution, that is, by respecting the solemn decisions of the Government, sanctioned by time, especially when those decisions have been made by the founders of the constitution, and at the moment when the causes and principles which brought it into effect were fresh in the minds of the people.

The constitution itself, after guarding the simple and essential points on which the freedom of the people reposes, appears to have left the most liberal powers of construction as to the mode of carrying it into effect, with the government it created, which its framers well knew would at all times be the just and powerful representative of the people, scarcely inferior to themselves. Decisions by that Government, therefore, uniform from time to time, must be considered as of great force; and their application at present to the Bank of the United States constitutes perhaps the best argument in its favor, but upon no subject do its decisions appear more uniform than upon the tariff; and although one important object for establishing the duties on imports will cease with the national debt, still two out of the three declared at the time of forming them, as of equal effect, remain, viz. the support of Government, and the encouragement and protection of manufactures.

There is no one point of the constitution in which it seems more necessary to obtain a clear construction than that most liberal one of providing for the general welfare, by which it should be intended that Congress should exercise a wide discretion in doing all those acts which contribute to the happiness of the people: and this seems peculiarly applicable to the encouragement and protection of that labor and universal employment upon which every one depends, not only by guarding it from all exterior injuries, but encouraging it at home by those acts which the people cannot effect for themselves; for which purpose the removal of existing taxes, or the levy of new ones, seems the great object, not only of the constitution and Union, but in fact of Government itself.

I have endeavored, in the foregoing notes, to show that the institutions of a tariff law: point of fact, have existed in every nation coeval with its commerce; that it has equally embraced all the objects of labor, and that no great object of internal labor has ever been matured without those regulations which are justly comprised in its more extended name, as I have not seen in any publication on the subject any contradiction of this which a course in point of fact, or is not drawn from the restrictions of feudal times, with which many States are still most grievously oppressed, or from the want of wisdom in the construction of the acts of regulation themselves.

What is meant by free trade it is difficult to collect in the publications of the day, viz. instead of a broad and liberal definition of its principles, are chiefly confined to explanations and complaints against particular manufactures. If an universal free trade be proposed, as some have imagined, it requires so much the accordance of all mankind that it would be scarcely wise in any one State to begin it; but if restrictions of any kind are to remain, it comes to the same point as a tariff of commercial regulations, depending on the measures with which they are formed.

The constitutional objections adjusted, there would remain to the Government the most arduous but not less important exercise of its powers in the review of its tariff, which, from its nature, it constantly and essentially requires to adjust the revenue, finances, and labor of the country, upon principles of universal and equal accommodation. This adjustment is now decidedly requisite in many of its details, which are incongruous and inconsistent with each other, a circumstance that will always more or less occur; and the preparation of the measures necessary for the purpose rests with peculiar propriety upon the minister to whom the administration of the finances is committed, but it is not only essential that he should have all the aid necessary to a thorough investigation of the subject, but that in every step of the consideration of it there should exist the most perfect statistical documents of the whole course of the labor, wealth and resources of the country, in all their details. This, like a perfectly well adjusted account, would of itself dictate many of the measures to be pursued, clear up doubts and difficulties which occur, and leave even the points for discussion clear, where differences of principle or opinion exist: above all, it would have a happy tendency to give that information of the establishments of the country to its distant sections, the want of which is perhaps one of the greatest sources of difference. On this head it should seem that the measures recently instituted by the Secretary of the Treasury would produce the result, if time were given for the diligent investigation they require. In England, a thorough investigation of this kind is the basis of every financial operation, and is essential to the minister who is or ought to be the best informed person in the kingdom upon all its operations, nor would it be less important here, in every stage of legislation, to Congress itself.

After correct information on the subject, it is of the utmost importance that we should come to its discussion with the spirit of compromise which the whole history of our constitution requires, and that, while the importance of the institutions of the north are justly estimated almost as the fabric of society there, equal attention should be bestowed on those of the south after allowances on both sides for what feeling, and perhaps an honest but warm imagination has painted as to present distress, it is an object to consider how much of this distress itself arises from the universal depression which followed the late peace, how much it has been subdued by industry step by step, till it will soon yield to it altogether, that the institutions of one part of our country are laying the most permanent foundations of relief to the rest, and how vitally essential it is that the great fabric of our common labor and Government should be supported.

Of the precise measures to be adopted at present, it is proper to observe that individuals not connected with the Government are rather called upon to furnish facts and information than opinions, which perhaps will be hazarded most by those who are the least capable of feeling their importance; and, unquestionably, it must be obvious that the arrangement of these measures in the first instance, can be effected by no one so well as by him before whom the whole

## DOCUMENT 16.—No. 3.—Continued.

mass of facts must come into review, nor better decided upon than by the Government to whom both the arrangements and facts will be submitted. On this subject, it is however correct to observe, that the late report of the Secretary of the Treasury already contains a most lucid preliminary to the subject in point of principle, and one sentiment among many may be selected as a just ground of confidence to all who are disposed to think liberally on the subject, viz.: "These duties, (alluding to those in some of the most important branches of manufacture) could not be materially changed at present, without the effect already deprecated. No objection is perceived, however, to such a gradual reduction of them in future, as may withdraw the aid thus afforded, as the growth and stability of our manufactures will enable them to dispense with it, to such a degree at least as will, with the aid of an increase of population and the means of consumption, still leave a revenue adequate to the expenditures, or until what may be withdrawn from them may be levied on other articles which may be found to admit of it."

When to these and other sentiments expressed in the report, the result of the information now in progress is added, there is every just reason to hope that this one, out of many entangled circumstances which have yielded to the discernment of the Secretary and the firmness of the Government, will receive the same confidence from the country that has been bestowed upon its arrangements abroad and at home.

Since, however, opinion is in some degree demanded, and may be useful where suggested with moderation, it may not be improper to mention that much of the utility of a scale for the reduction of the duties on protected articles depends upon time, particularly the time at which they are begun. Institutions of labor unquestionably acquire permanence—obtain it from successful operation, and become enabled to endure shocks which would utterly overthrow them in their outset: such permanence many of our manufactures have attained, and others are attaining, and the consideration of these are among the most important objects of constant review and attention; but the protection seems necessary to both to counteract the deleterious effects of foreign articles of the worst fabric, and if the duties at present go even beyond the point of protection, they seem useful in correcting the effects of fluctuating importations which most materially affect them. In the course of last year there was a large importation, which, however, did not seem to affect our manufacturing institutions (though it would do so if continued,) more than it has affected other institutions of the country, particularly the money market, and through that the country generally, by its inevitable consequence of a demand for specie.

It is probably worth while to mention another mode of settling the different opinions on the tariff, that is by retaining the duties especially on the protected articles, and giving the surplus of revenue to the southern States either in bounties on the export of cotton, or in such other way as may be devised. This would retain their operation against foreigners for the common benefit of the country, and the measure itself is sanctioned by what has been done in adapting the duties on salt to the fisheries and salt provisions, and in several other instances.

JOSHUA GILPIN.

KENTWEE, NEAR WILMINGTON, (DEL.,) May 1, 1832.

## ANALYSIS OF THE TARIFF, 1794.

| Commerce.                           |     | Fisheries.                                |      |

| 250 tons pig and scrap, at \$30        | - | - | - | - | - | \$7,500         |
| 250 tons castings, at \$60             | - | - | - | - | - | 15,000          |
|                                        |   |   |   |   |   | <u>\$22,500</u> |

500 tons iron, leaving a profit of \$6,500 per annum, yielding an income of say 20 per cent. on a capital of \$30,000.

The owners say they have been engaged here and elsewhere in the manufacture of iron for the last twelve years, and have witnessed a decline in the price of castings from \$120 to \$60 per ton, entirely the consequence of domestic competition. At this reduced price, they say, "that any material reduction in the present protecting duty would cause ruin to their business, as there is no situation entirely exempt from foreign competition."

*Remarks.*—This furnace appears to yield a greater profit on the quantity of iron made than others which have been heard from. By comparison with the other estimates given in, the labor and expenses, \$4,500, deduct one-half of them incurred by the Union, Pine Grove, &c. &c., there is no just reason for supposing that there would be this great difference in these items between furnaces situated within fifty miles of each other, using the same method of manufacturing, and employing hands at similar rates of wages. The one costs the proprietors more than double the price it does the Sciota, Franklin, &c. &c., from which it might be inferred that the proprietors are mistaken in the amount of their profits, say at least one-half. Their lands, however, improve in value as they are cleared, and on that account may make as great a profit as their estimate would show.

Ohio Brush Creek Forge, in Scioto county, was established by John Means & Co. in 1829; water power: the capital invested is about \$12,000; lands attached to the forge amount to \$2,300, including the water privilege; about \$7,600 are invested in buildings, machinery, &c.; the balance of capital, say \$2,100, is active; 27 hands are employed during the year, supporting at least 80 souls; 18 oxen and 2 horses are used, consuming say 2,000 bushels corn. The water power in this section of country is by no means permanent, and the forge would not be capable of running more than six or eight months; 200 working days for the year would be a fair average, and the subjoined estimate is made for that length of time:

|                                            |   |   |   |   |   |                 |
|--------------------------------------------|---|---|---|---|---|-----------------|
| 140,000 bushels charcoal, at 3 cents       | - | - | - | - | - | \$4,200         |
| 300 tons pigs, at \$31 50                  | - | - | - | - | - | 4,450           |
| Labor on 200 tons bar iron                 | - | - | - | - | - | 4,600           |
| Salaries of manager and clerk              | - | - | - | - | - | 700             |
| Wear and tear of machinery, buildings, &c. | - | - | - | - | - | 600             |
| Transportation to market                   | - | - | - | - | - | 300             |
|                                            |   |   |   |   |   | <u>\$19,850</u> |
| 200 tons bar iron, at \$110                | - | - | - | - | - | <u>\$22,000</u> |

Leaving a profit of \$2,150, say 17 per cent., on capital employed. The market for the bar iron is at the towns on the Ohio river.

Lafayette Forge, in Scioto county, was established by the owners of the Scioto Furnace, in 1829, with a capital of \$10,000. This forge is situated on the Little Sciota river, within four miles of the furnace, and is used for the purpose of manufacturing the scrap and inferior iron of that establishment into blooms. The owners think they are doing well if they make or save \$1,000 per annum by this concern, though the subjoined estimate would show a greater profit. \$2,500 are invested in buildings, water power, land, &c., and \$7,500 in machinery, stock, &c. The forge runs for six months in the year, and 16 hands and 18 oxen are employed for that time. Some 50 persons obtain subsistence by labor of this establishment.

Estimate of the annual expenses and product of the Lafayette Forge:

|                                                     |   |   |   |   |   |         |
|-----------------------------------------------------|---|---|---|---|---|---------|
| 400 bushels charcoal to ton of pig, is 82,200, at 3 | - | - | - | - | - | \$3,466 |
| 312 tons pigs, at \$32                              | - | - | - | - | - | 9,984   |
| Labor and expenses                                  | - | - | - | - | - | 4,308   |
| Transportation                                      | - | - | - | - | - | 832     |

|                                                                      |   |   |   |   |   |                 |
|----------------------------------------------------------------------|---|---|---|---|---|-----------------|
|                                                                      |   |   |   |   |   | <u>\$17,588</u> |
| 8 tons blooms per week for 26 weeks, are 208 tons per annum, at \$93 | - | - | - | - | - | <u>\$19,344</u> |

Leaving an annual profit of \$1,762, or 17½ per cent., on a capital invested of \$10,000.

## DOCUMENT 17.—No. 2—Continued.

*Remarks.*—From the two preceding estimates, an inference might be drawn that the business of a forge yields a fair profit; but from such general information as has been obtained, the business cannot be considered profitable in this section of the Union. A forge unconnected with a furnace would scarcely yield a maintenance. The calculation of the Ohio Brush Creek Forge (on the preceding page) is predicated on an annual-product of 200 tons of bar iron. The forge has never made this quantity of metal, owing to the many incidental circumstances which occur in almost every establishment, but particularly in establishments of this nature, in the western country. The workmen who understand this kind of business are, as yet, by no means plenty; those who are here are dissipated, leave at a moment's notice, and are difficult to be replaced. The labor is very severe, and, when Saturday arrives, are almost exhausted, requiring at least two days in the week to recruit. Twelve tons of blooms per week for six weeks together, would be considered excellent work on the Juniata, where water power is permanent. The streams in this section, dependant on rains for supply, yield no permanent water power; and there is scarcely a forge in this section making 200 tons blooms, so that 200 tons of bar iron would be too great an annual product. There are two other forges in the neighborhood, one of which has not been heard from, and the other is known not to have made an hundred tons blooms, though in operation for nearly a year. A steam forge for the manufacture of blooms is about going into operation in Kentucky, on the Ohio river, in connexion with a rolling mill at Cincinnati. Rolling mills are now generally used for making bar iron, and forges for that purpose will be abandoned, or go into the manufacture of blooms for the rolling mills.

*Furnaces in the Ore Region of the French Grant.*

Pine Grove Furnace, in Lawrence county, was established in 1828, by three individuals, with a capital of \$18,000; steam power; 3,000 acres of land, worth \$2 per acre, are attached to the furnace, amounting to \$6,000; \$5,000 are invested in buildings, the residue, \$7,000, at the time of commencement, invested in ore, coal, goods, &c.; 100 hands are employed throughout the year; and there are on the place 30 families, averaging five persons each, who are entirely supported by this establishment, besides many others whose subsistence, in a great measure, depends on the labor of the furnace; 70 oxen are employed by the concern, consuming 12,000 bushels corn per annum. The ore used by Messrs. Ellison & Hamilton (the proprietors of the establishment) is the rock or calcareous ore, with a slight admixture of clay or argillaceous, and requiring about three tons of ore to one of iron. The rock ore is found in veins varying from four to five feet in thickness. The furnace is kept in blast nine months in the year, and, during that time, worked night and day, without cessation: the other three months of the year are occupied in repairs and accumulating stocks of ore, coal, &c.

|                                      |   |   |   |   |   |                 |
|--------------------------------------|---|---|---|---|---|-----------------|
| 3,000 tons ore, at \$1 50            | - | - | - | - | - | \$4,500         |
| 280,800 bushels charcoal, at 3 cents | - | - | - | - | - | 8,424           |
| Labor and expenses amounting to      | - | - | - | - | - | 17,251          |
|                                      |   |   |   |   |   | <u>\$30,175</u> |
| 475 tons pigs, at \$28               | - | - | - | - | - | \$13,300        |
| 450 tons castings, at \$60           | - | - | - | - | - | 27,000          |
| 75 tons scrap, at \$25               | - | - | - | - | - | 1,875           |
|                                      |   |   |   |   |   | <u>\$42,175</u> |

1,000 tons iron are made per annum, at a profit of \$12,000.

The above calculation is based on the business of the last year. Since the establishment of the furnace (four years) no dividends have been made; and the actual capital required and employed in the above estimate amounts to \$45,000. The above is substantially a correct calculation, and the actual profit may be estimated at 25 per cent. per annum, on a capital of from \$40,000 to \$50,000.

Union Furnace, in Lawrence county, Ohio, was established in 1826, (the first in this section of country,) with a capital of \$20,000. No dividends were made since the establishment of the concern, and the actual cost to the present owners is \$40,000. The works are propelled by steam power; about 3,300 acres of land are attached to the concern, (some of which were Congress and some in the French Grant proper) costing \$1 25 per acre, amounting to \$4,150; \$8,000 are invested in buildings, &c. the rest is floating capital, invested in ore, coal, iron, &c. Below is subjoined a calculation based on the business of the last year, yielding on original investment say 20 per cent.; the average profit, however, from the commencement, in 1826, to the present time, 1832, has been about 10 per cent. on the whole capital invested. The ores used at the furnace are the same as those of the preceding, (the Pine Grove) the argillaceous and the calcareous, which are dispersed in strata of from 6 to 10 inches. There are several strata of bituminous coal running all through this region, of which the upper stratum is the largest, say from 2 to 4 feet in thickness.

## DOCUMENT 17.—No. 2—Continued.

|                                                 |   |   |   |                 |
|-------------------------------------------------|---|---|---|-----------------|
| 5,000 tons of ore are used per annum, at \$1 25 | - | - | - | \$6,250         |
| 325,000 bushels charcoal, at 3 cents            | - | - | - | 9,750           |
| Expenses and labor in manufacture               | - | - | - | 15,153          |
|                                                 |   |   |   | <u>\$31,153</u> |
| 500 tons pig, at \$30                           | - | - | - | \$15,000        |
| 300 tons castings, at \$55                      | - | - | - | 16,500          |
| 200 tons scraps, at \$20                        | - | - | - | 4,000           |
|                                                 |   |   |   | <u>\$35,500</u> |

1,000 tons of metal, yielding a profit of \$4,347, say 10 per cent. on the entire capital.

The above calculation yields a less profit than furnaces generally do; but it would appear that the ore is poor in quality, requiring 5,000 tons to produce the same amount of metal as other furnaces, taking but 3,000; 200 tons of scraps is also a greater allowance than ought to be made, as the iron is smelted into pig or castings of much greater value; 49 yokes of oxen are employed, consuming some 15,000 bushels corn; 100 hands have permanent employment; and 25 wood choppers, some 4 or 6 months in the year; 100 families, averaging three persons, subsist entirely on the labor of this establishment.

Scioto Furnace, in Scioto county, Ohio, was established in 1829, by three persons, with a capital of \$30,000; 2,300 acres of land are attached to the concern, costing about \$3,500; \$10,000 are invested in buildings; \$4,500 in steam engine, machinery, &c., and \$11,000 in active capital; 86 hands find permanent employment throughout the year, on whose labor at least 350 persons depend for subsistence; 54 oxen and 3 horses are used, consuming some eight or ten thousand bushels of corn. The ores used are the kidney and clay, of which the kidney is the richest; three tons are required to make one ton of iron. This furnace runs about 9 months, and the estimate below is made for 270 days:

|                                               |   |   |   |                 |
|-----------------------------------------------|---|---|---|-----------------|
| 13 tons ore per diem=3,510 tons, at \$1 37½   | - | - | - | \$4,826         |
| 900 bushels coal per diem=243,000, at 3 cents | - | - | - | 7,290           |
| Labor and expenses of various kinds           | - | - | - | 16,460          |
|                                               |   |   |   | <u>\$28,576</u> |
| 100 tons castings, at \$60                    | - | - | - | \$6,000         |
| 980 tons pigs, at \$33                        | - | - | - | 32,340          |
|                                               |   |   |   | <u>\$38,340</u> |

1,080 tons metal made per annum, at a profit of \$9,764, say \$10,000, (as the labor of smelting in the item of expenses is overrated,) being a clear profit of 33½ per cent. on the original investment of \$30,000; without, however, taking into consideration that this, as well as all other seats for furnaces, decreases at least ten per cent. in value per annum, by the exhaustion of ore, timber, &c.; the country being barren, the lands, after being deprived of the timber, are valueless, and allowed to run waste. It would appear that the iron of this establishment is held in greater estimation than that of any other in this section, as it sells from \$4 to \$6 higher than that of the neighboring furnaces. This, also, is the only furnace which uses the kidney ore; it being more abundant here, and forming a large portion of the ores smelted, may account for the superior quality of the iron. It (the kidney ore) is always the upper stratum, being found in the tops of the hills, with but a slight covering of earth.

The Ohio Iron Company, in Scioto county, established two furnaces, one called the Franklin, in 1837; and one the Franklin Junior, in 1829. The company was incorporated in 1828, with a capital of \$100,000, 60,000 of which is the amount actually invested, and on which the business yields a profit of 15 per cent.; 2,000 tons of iron are made per annum, at from \$30 to \$60 per ton; 6,000 tons of ore, at \$1 25 per ton, and 550,000 bushels coal, at 3½ cents, with 500 tons limestone, at \$1 50 per ton, and 20,000 bushels of coal, (bituminous) at 6 cents per bushel, are annually consumed; from 200 to 300 hands are constantly employed; the wages of the laborers from \$8 to \$10 per month, and the mechanics from \$1 to \$1 50 per day; 70 or 80 yokes of oxen are employed, principally during the summer. A portion of the iron is sold at the furnace, but the principal part is sent to the towns on the Ohio river; some has been sold in New York, and a small lot, by order, has been shipped to England, presumed as an experiment, the result of which is not known. The foreign article does not enter into competition at the markets on the Ohio river, owing to the necessary expense that would be incurred in freighting it up the river; but it does at New York, which competition the company are enabled to sustain by the present rate of duty. Occasional sales are made for cash, but generally on a credit of from three to six months. The cost of manufacturing has somewhat increased since the commencement of the establishment, owing to a greater demand for labor, caused by the increase of similar establishments in the vicinity. The advance is not great, however, and as the price of iron has not varied materially, the profits continue much the same. The com-

pany do not think that capital invested in iron works yields a greater profit than capital otherwise judiciously invested, and managed with equal skill. The establishment is supplied with provisions from the surrounding country, and with, generally, low priced clothing, manufactured in the eastern section of the United States. The goods are purchased principally in New York, in payment of which bills are drawn on factors to whom iron has been shipped for that purpose, it being a convenient method of remitting and yielding a fair profit on the shipment. If the duties were reduced to 12½ per cent., the company would abandon the business; their capital they suppose would cease to exist. The lands being unfit for culture, and the works being unfit for any other purpose than the manufacture of iron, would be valueless were they compelled to abandon them.

*Remarks.*—In the foregoing pages, estimates have been given of the annual profits and products of five furnaces now in operation in that section of country commencing near the Scioto river, embracing Scioto and Lawrence counties, and bordering on the Ohio. In addition to which, four other new furnaces are, or are about being commenced, in different stages of progress; making in all nine furnaces which will be in operation in the spring of 1833, and producing about 1,000 tons of iron each, manufactured at the furnace into pigs and castings.

The value of castings for some years past has been \$60 per ton; the price of pigs has varied from \$25 to \$32; at present they are in brisk demand at \$30. Supposing that these furnaces made pig metal alone, valued at \$30 per ton, their united product would be 9000 tons, worth \$270,000 per annum, employing from 900 to 1,000 hands, supporting, in a country otherwise barren, a population of 3,000 persons, and consuming about 100,000 bushels corn in food for oxen and horses. The capital invested or employed might be safely estimated at \$300,000, yielding an average interest (judging from the estimates) of 20 per cent. per annum. The ores (of several kinds) appear abundant and almost inexhaustible, and bituminous coal abounds, being used at every furnace for the steam engines, which is the only power used for the production of blast. The furnaces are in blast night and day for nine months in the year, the other three months being required for repairs, renewal of stock, &c. The wages of the laborers are somewhat higher than are given for other purposes, such as agriculture, canals, &c. As regards pig iron, it would appear to be beyond foreign competition, but as soon as manufactured would be subject to, and controlled by, its influence, were it not protected by a duty. The impression of the iron masters generally is, that a reduction of duties would cause ruin to themselves and to their business. In reply to the question proposed by the Secretary—"In what would you employ your capital were you to abandon your business in consequence of a reduction of duties?"—a highly intelligent individual remarked: "That, if any thing were saved from his property, he would proceed south, purchase slaves, and commence the planting of cotton, that yielding a greater revenue for the capital invested than any other business, that of sugar not excepted."

The Colerain Cotton Mill Company was incorporated in 1823, with a capital of \$20,000. The mill is propelled both by water and steam power, and manufactures cotton yarn, wick yarn, and batting; 2,000 lbs. cotton are consumed per week, costing at the factory 10½ cents per lb.; 60,000 lbs. cotton yarn, at 22 cents, and 2,500 lbs. batting, at 15 cents per lb., have been made the present year; 5 men, at from \$4 to \$10 per week, and 30 women and children, at \$1 to \$1 75, are employed for 12 hours a day the year round: \$80 is the amount paid in wages per week. The profits of the company have been about 11 per cent. since the commencement, without calculating the depreciation of buildings, machinery, &c. Profits have latterly decreased, in consequence of heavy importations from the east, and competition in the western States. No money has been borrowed by the company, except occasional discounts at the Bank of the United States. Four horses are employed in transporting the yarn and cotton to and from Cincinnati, from whence the mill is distant 18 miles. The yarn is all sold in Cincinnati for cash, and an average credit of four months, but is consumed in Illinois, Missouri, and States on the river. The prices of yarn have varied in nine years from 45 to 20 cents. A dividend of 20 per cent. was paid; the rest of the profits accruing has been retained as capital. 100 persons are supported in and about the establishment. The neighboring families have made about \$4,000 worth of linsey, &c., which was dressed and finished at a fulling mill on the same property. The usual rate at which money is let among the farmers of this section is from 10 to 12 per cent.

The Woodbourne Cotton Factory was established by individuals in 1820, and proved a losing business until the present year, when it passed into the hands of the present occupant. About \$5,000 are invested in stock, machinery, buildings, &c. In consequence of improved machinery, the cost of manufacturing has decreased, while the profits have increased on account of the present rise in the price of yarns. 25,000 lbs. of yarn, No. 7, are made per annum, worth about \$5,750, which is all sold at the factory, and consumed in the county of Montgo-

## DOCUMENT 17.—No. 2—Continued.

mery, in which the mill is situated. One man at \$6 per week, and ten girls at \$1.25, are employed 12 hours a day throughout the year; the yarns are sold for cash and a credit of ninety days. The mill is driven by water power.

The Miami Cotton Mill Company was incorporated in 1830, with a capital of \$20,000, one-fourth of which is borrowed. The mill is situated in Dayton, Montgomery county, on the Slate Basin, from which it draws its water power; 4 men at \$1 per day, and 16 women and children at 22 cents, are employed 12 hours a day the year round; 60,000 lbs. raw cotton are annually manufactured into yarns, worth \$14,000, half of which is sold at the factory, and the remainder sent by the canal to Cincinnati, a distance of 65 miles. The yarns are sold for cash or a credit of four months, and are generally consumed in the manufacture of household goods. The yarn is coarse in quality, averaging No. 8, at an ordinary price of 22 cents. Half of the cost of yarn is raw material, one-fourth in labor, and one-fourth in profits. No dividends have been made, and the profits are invested in new machinery. The mill is not yet completed; in a short time double the quantity of machinery will be in operation, requiring double the amount of cotton, hands, &c., and of course producing double the amount of yarns. Attached to the cotton mill is a machine shop capable of making \$20,000 worth of machinery per annum. Within eight months, \$8,000 worth has been made, part of which is for Spanish America; one-fourth the cost of machinery is in material, such as wood, iron, &c., one-half in wages, and one-fourth in profit. About \$7,000\* worth of agricultural productions are consumed among the families dependant on the factory for support.

## PAPER MANUFACTORIES.

There are eight paper mills in the Miami country: three on the waters of the Big Miami, three on the Little Miami, two in Cincinnati, worked by steam power, cost 60,000, employing a capital in stock of \$30,000; manufacturing annually \$120,000 worth of writing, printing, and wrapping paper, which is principally used in Cincinnati and vicinity in book and news printing. The price of paper has been uniform since 1820; rags have varied little in the same time; wages to hands have advanced say 25 per cent.; the profits have been nearly the same, owing to improved machinery and knowledge in the business, say 20 per cent. on the capital employed. The number of hands employed, say 160, one half females; wages to females \$1.25 per week, to men \$6.50. No foreign paper in our market for sale.

## DOCUMENT 17.—No. 3.

## CITY STATEMENT.

*Answers to the Secretary's interrogatories in their order, by the Cincinnati Type Foundry.*

1. Ohio and Hamilton county.
2. Printing types and press, steam engine screws, steam power types, made by hand.
3. 1820, joint stock.
4. Capital 40,000.
5. 30 tons lead, 10 tons antimony, half ton tin.
6. 20 per cent. on borrowed capital and 27 on real.
7. Domestic competition cause decrease of profit.
8. Thirty-five.
11. No type imported.
12. 40 men and 15 girls; average wages of men \$1.50 per day, and girls and boys \$2 per week.
13. 10 hours a day year round.
14. Same.
15. None.
16. All disposed of in Mississippi valley.
17. Do not.
18. Answer as 16.
19. None from this establishment. Formerly to South America.
20. Both cash and credit of 6 months; old type received in barter.
21. Same.

\*This is evidently an error, but the answer being so given to our agent, I have retained it.  
M. N.

DOCUMENT 17.—No. 3—Continued.

22. Prices are found in Printers' Specimens; same through the United States.
24. None is necessary, as none are imported.
25. Rate of profit in No. 6; no dividend, whole amount of income converted into fixed capital.
27. 60 hands and families are fed entirely, and clothed principally, from the productions of the country.
28. The only foundry in the State.
29. Could not continue to manufacture at reduced prices, and would abandon the business.
30. A hard question.
31. Yes.
33. 40,000; borrowed 10,000.
37. The entire.

Morgan & Sanxay, bookbinders and printers, employ a capital of 15,000; they have fifty hands, twenty of which are women: the wages of the men are 8 dollars weekly, of the women 3 dollars; there are also three boys, who earn each two dollars per week. All the materials employed, excepting leather, are domestic, and a share of the leather also is such.

Henry B. Funk, tanner and currier, employs a capital of \$20,000, and the labor of 10 men, at the average wages of twenty-two dollars per month; his raw materials principally domestic; value of articles manufactured per annum \$18,000.

J. A. James, stereotype foundry, employs twelve hands, principally men, whose wages average eight dollars per week, the boys earn two dollars weekly. The value per year of his manufactured articles is 5,000 dollars. His market is at home.

J. M. Rowan makes blank and playing cards and press papers. There are twenty hands, a large proportion of which are girls and boys; the wages of the men are \$9, of the boys and girls \$1 50 per week: materials domestic; the only establishment in the whole west or south of the United States. He also makes fancy colored printing ink. Value of his manufactured articles \$24,000 per year.

We are, Carneal & Co., planing machine for boards, stone, &c., are just commencing, and calculate to employ four machines and 12 men; these last at an expense of 6 dollars per week. They expect to turn out \$22,000 worth of manufactured articles during the present year. Their machines quarter joint plough and grove boards, and dress out scantling and stone for building, and dispense in these things entirely with manual labor.

John Baker & Co., sash makers, employ four men and two boys; make \$5,000 worth of sash, principally for city use.

John Richards, steam cooper establishment, employs fifty men and four boys; shaves and joints his staves by machinery, and can also make the heads and shave the hoops by the same process; requires as good workmen in this establishment as in shops where manual labor alone is employed; expense of the power \$20 per month, and requires four hands and an engineer to attend it: his weekly expenses exceed 700 dollars. This is the largest establishment of the kind in the United States. He makes annually, with the capacity of increasing the amount,

|                                        |                                     |
|----------------------------------------|-------------------------------------|
| 1,600 half barrels, at - - - 62½ cents | 15,000 lard kegs, at - - - 40 cents |
| 34,000 pork do - - - 80                | 4,000 hogsheads, at - - - 1 25      |
| 2,000 beer do - - - 100                | 1,000 tight hhds. at - - - 2 75     |

and at least 2,000 dollars miscellaneous work.

William Stephenson, tin-plate and sheet iron worker; capital \$7,000; employs three men and four boys; men's wages \$7 per week, boys \$4 per week; materials principally foreign.

Chs. Libeau & Co., make fringe and coach lace; employ 3 men at \$1 25 per day, 2 boys at 50 cents, and 2 girls at 37½ cents per day: all materials, except silk, domestic manufacture, in value \$12,000; they do all their own dying.

A. Reuss, piano forte and pedal harp manufacturer. Pianos of every kind, harps from one to seven pedals; cabinet pianos as high as \$700, usual price \$350 to \$500. Pianos are made of better quality in the United States than in Europe. From the large share in value, which arises from the amount of labor bestowed in making them, a reduction in the duty would be fatal to this branch of manufacture, which is already struggling for existence. He made four pianos the last year, value \$2,000; does all his own work; employs mahogany veneers, and bird's-eye and curled maple plank.

J. & J. Mahard, exporters of produce. They have shipped during the last business year 1,700 kegs lard, 150 kegs butter, 4,434 covered hams, 37,000 lbs. pork in bulk, 535 hhds. hams and bacon, 1,900 bbls. pork, 13,000 bbls. flour.

Stephen Burrows, tobacconist, employs 5 men and 5 boys, the men at \$7 50 and the boys \$1 50 per week; materials all domestic. Turns out manufactured articles of tobacco to the value of \$7,000 per annum.

J. J. Haskins & Co., hat factory, employ 6 men and 6 boys, the men at \$1 25 per day, the boys at 37½ cents wages; materials principally domestic, the value of which is about \$2,000 in a year's business. Their business is about 12½ per cent. on that of the city; their market the city of the Mississippi; value of hats, &c. manufactured \$8,000 per annum.

A. C. Brown, machine card factory, just established, and operates by steam power; employs 10 men, at average wages of \$1 25 per day, and 3 girls at \$3 per week; consumes \$3,600 worth of iron wire annually; foreign materials, wire, and domestic leather; makes not only cards usually to the value of \$8,600, but machines for cards to the amount of \$3,600, and will make a much greater amount when fully in operation. Its market is the valley of the Mississippi, and sales are made for cash and on credit of 90 days; works 11 hours per day all the year round. Bassett & Kendall, saddle-tree factory; make 100 saddle-trees per day, which sell as follows: sit head \$8 per dozen, fall back \$9 do., side \$12 do. These prices are 25 per cent. less than were obtained two years ago, although the raw materials have advanced within that period. This establishment is the largest in the United States; there are none south or west of New Orleans, N. J., besides this, but one at Wheeling, on a small scale; the factories in Trumbull and Edgeport are next in importance to this; they need no protection; steam power is employed; they use half a ton of iron per week—none but the best Juniata will answer; they make their own canvasses and wooden frames. There are in this factory 22 men, who earn from 8 to 16 dollars per week, 6 women, at 50 cents per day wages. It is supposed to be one of the most profitable factories in the State: its owners do not permit drinking nor swearing within its walls. E. B. Casey, tobacco factory, Covington, consumes 300 hhds. leaf tobacco annually; employs hands at \$5 per week, and 10 boys at \$1 50; turns out 1,500 kegs tobacco annually, valued at \$15,000; his trade is one-eighth of the tobacco trade in Boone and Campbell counties.

J. Bonté, rope walk; manufactures cordage by horse power; was established in 1833; capital, in machinery and buildings, is \$1,000; consumes 80 tons hemp annually, worth \$800; the profits of the business are decreasing, owing to rise in the raw material and domestic competition. He employs 8 men and 10 boys; the men earn about \$1 per day, and the boys \$1 50 per week; they work 12 hours in the day on average the year round; the market for his manufactures is at home. Cordage is not imported, although the material in part, Manila hemp, is, and, on the Atlantic coast, the Russia also. Manufactures 160,000 lbs. cordage, ranging 10 cts. per lb., \$16,000 in value. The Manila and Russia hemp injure the planter, but do not affect the manufacturers' interest unless indirectly.

Aspar Hopple & Son, tobacconists, manufactured by steam power within the last five years, but for twenty years previously, by horse. The business affords a profit of 20 per cent. on the amount made; makes 300 kegs tobacco and 60,000 lbs. snuff annually, value \$15,000, employs 10 men, who earn about \$7 per week; market in the valley of the Mississippi.

William Holyoke, coachmaker, employs 12 hands at an average of \$1 25 per day; manufactures stages, gigs, coaches, &c. to the value of \$9,000 per year.

Thomas McGregor, stone and marble yard; turns out work in value \$10,000 per annum; employs 12 hands, who earn \$1 50 per day.

J. McDonald, blacksmith, consumes 40 tons iron and 1 ton steel in the course of the year, worth \$4,000; employs 13 men and 7 boys; value of work produced \$11,000 per year; uses chiefly the English iron, which answers for railings and wagon tires, but is not as valuable as cast iron for general purposes.

Hiram Marks, cutler; works by steam power, employs 5 hands; value of work \$5,000 per annum; owing to the low price of labor abroad, and the large share of value which it forms in a manufactured article, a reduction of duty would operate very injuriously.

W. S. Chappell, tailor; employs 6 men and 8 women, at 8 and 3 dollars per week, respectively; makes clothes to the value of \$8,000 in the course of the year; materials principally foreign, and the work made generally for customers in this city.

Seeler & Co., scale-beam factory; makes 250 scale-beams per year; aggregate value \$3,000; employs 4 men.

J. Ryder, manufacturer of machine cards; uses, of foreign articles, wire to the amount of \$500, and of domestic, \$1,000 value of leather; employs 4 hands, and makes to the value, annually, of \$7,500.

Hills & Williams, plough and axe-makers; consume in their shops annually 50 tons iron, of the best quality, and none but Juniata will suit; also 6 tons steel; value of iron and steel \$300; turn out 10,800 axes per annum, 400 ploughs, and wagons, carts, and drays, to the

## DOCUMENT 17.—No. 3—Continued.

value of \$3,000; the axes sell for \$18,900, and the ploughs at \$3,900. The demand for axes is so great that we cannot supply to any great extent the wholesale demand. Of steel we use principally Naylor & Sanderson's cast steel.

CINCINNATI, OHIO, March 9, 1832.

Sir: In answer to the questions proposed in your circular addressed to the manufacturers of the United States, we make the following statement, adopting the order of your questions, so far as they have a bearing on the subject of the manufacture of white lead. In order to be brief, we give answers only in this place, and number the answers corresponding to the questions.

1. Ohio, Hamilton county. 2. White lead, by steam power. 3. 1831, joint stock. 4. Invested in ground and buildings, and in machinery, \$6,000. 5. \$30,000 annually for materials and wages. 6. Profits about 5 per cent. on capital since the commencement, after deducting interest at 6 per cent. 7. Owing to the advance of the price of pig lead, and the competition between manufacturers here and at Pittsburgh, the profits are very small. 8. Do not know, as that depends much upon management and other circumstances. 9. 5,000 kegs in 6 months, value \$2 85 per keg of 25 lbs. 10. Pig lead has sold, since June, 1831, at 5 to 6 cents per lb. 11. Little if any imported, none from foreign countries to the western States. 12. 4 men, at average wages of \$1 25 per day for each hand. 13. About 12 hours all the year. 14. Wages same in this county for similar labor; in other states and foreign countries we know not. 15. One horse. 16. In part at home and in part sent to the interior, and up and down the Ohio river, from one to three hundred miles. 17. No foreign in the market. 19. None exported. 20. Sold chiefly on a credit of four months. 21. Increased to the manufacturer the last year, owing to the advanced price of the pig lead, oil, and wages, at an average of 50 per cent. 22. Sold by the keg, ground in oil, at \$2 50 and \$2 85, at present is worth \$2 85. 23. The present duty excludes any competition in this article from foreign countries in this market, and the manufacture of the article is sufficient for consumption. 24. None in this article. 25. Joint stock company, but not having been in operation one year, no dividend has been made; the profits are about 10 per cent. annually on the stock invested. 26. About 50 per cent. for materials, and about 40 per cent. for labor wages. 27. What 4 men and 1 horse will eat and waste. 28. Do not know. 29. We would be under the necessity of abandoning our business, if only 12½ per cent. were charged on the importation of white lead, and a corresponding reduction of all imports. 30. At present could not say in what way we would employ our capital. 31. To pursue our business after a reduction to 12½ per cent. of all impost duties, would be a ruinous business, of course, as stated above; would be under the necessity of abandoning the business. 32. Foreign salt and iron are, in all the valley of the Mississippi, sold in competition with the domestic manufactured article, even at the present rate of duty; and if the duty was reduced to 12½ per cent. ad valorem on foreign iron, every furnace and forge in the western States would cease to operate. 33, 34, 35, 36, 37, 38. Household or individual manufacture has decreased in the western country since 1824, one-half, owing to the cheapness of domestic cotton goods, and labor being more profitably employed in other pursuits. 39, 40. Leave these questions, and others not answered, to those who have better statistics to answer.

Very respectfully,

McLENAN & Co.

Hon. LOUIS McLANE,

*Sec'y Treas'y of the U. States.*

ROPE-WALK.—ANSWERS TO QUERIES.

1. State of Kentucky, Campbell county, on the bank of the Ohio river, opposite Cincinnati, Ohio.
2. Rope-walk, manufacturer of cordage, man and horse power.
3. 1829. Rope-walk, individual property, stock furnished from Cincinnati.
4. \$3,000 in buildings and machinery.
5. \$15,000 per annum in materials and wages.
6. 25 per cent. on \$10,000, 20 per cent. on \$5,000.
7. Increase or decrease of, dependant on the price of hemp.
9. \$15,000 in cordage of all kinds.
10. 50 to 80 tons Kentucky and Ohio hemp, five tons Manila hemp.

11. None imported, save small quantities Manila cordage, manufactured in the cities.
12. Ten men and six boys.
13. Eight to nine hours per day, all the year.
14. One dollar per day.
15. Two horses.
16. Manufactured articles all sold by the merchants in Cincinnati.
17. Competition of no consideration.
18. Principally by steamboats, balance local country consumption.
19. None exported, except occasionally bale rope to New Orleans.
20. Cash and credit of 6 months.
21. Increased ten per cent., on the cost of Kentucky and Ohio hemp the last 12 months.
22. Nine to ten cents per pound.
23. Duties do not reach this article in this country.
25. 25 per cent for three years, 25 per cent. wages and labor.
26. 50 to 60 per cent. raw material.
28. Probably in the State of Ohio, about \$50,000.

## ADDITIONAL PAPERS.

### DOCUMENT 18.—MASSACHUSETTS.

#### MANUFACTURE OF TACKS, BRADS, AND SPRIGS, IN ABINGTON, MASS.

ABINGTON, May 30, 1832.

SIR: In compliance with your request, I send you a short statement of the circumstances which led to the adoption of a tariff on the importation of tacks, brads, and sprigs, and the effect it has had on the manufacture of those articles, and on commerce. This will show, as you observe in your request, "the whole bearing of a judicious tariff on an important manufacture, unconnected and distinct from other articles."

The making of tacks, by hand, commenced very early in this town, say sixty years since. The first attempt was, to cut up old hoops into points, by a very imperfect kind of shears, and take them up, one by one, and place them in a common vice, and screw up and unscrew for the purpose of heading each tack with a hammer. From this process they were called *cut tacks*. But the mode in making by hand was much improved by moveable dies, placed in an iron frame, in the shape of an ox bow; the two ends, in which were placed the dies, being brought together by a lever pressed by the foot. In the first process, a man might make 1,000 tacks per day, in the latter 8,000 per day. This was a great improvement; and the inventor, (Mr. Ezekiel Reed, then residing in this town, now of North Bridgewater, and who is a very aged man, over 80) was entitled to a patent. He made some attempts to conceal the operation, but it was so simple and so easily applied, that others soon got it, and it came into general use.

With machines, or "tack tools," as they were called, thus improved, from three to four hundred men and boys, were employed in making tacks in this town and vicinity from about the year 1800 to 1816. Previous to 1800, for about 30 years, the business was progressing from a very small beginning, to employ the number of hands as above.

In 1815 and '16, a machine was invented by Mr. Jesse Reed, then of Hanover, in the county of Plymouth, son of the above named Ezekiel Reed, to make tacks at one operation. Mr. Melvil Otis, of Bridgewater, claimed and received a considerable share in the invention. Soon afterwards the machines were much improved by the inventions of Messrs. Thomas Blanchard, of Springfield, and Samuel Rogers, of East Bridgewater. These inventors are still living, and are all natives of Massachusetts.

For the exclusive patent rights of these inventions, Elihu Hobart, esq. and the writer of this paid something over twenty thousand dollars; to which must be added for building of machines and fixtures to put them into operation by water, ten thousand dollars more; making thirty thousand dollars expended, in the first instance, to commence the business of making tacks. Large sums were added afterwards. The price of tacks was reduced over fifty per cent. immediately, and one man could make more tacks in a day on one of the patent machines than fifteen could by hand, even in the last improved mode by moveable dies: by hand 8 or 10,000 per day, on a machine from 100 to 150,000. One machine has turned out over 250,000 in a day.

But at this critical period of our affairs, for we had but just put our machines into full operation, and I had almost said of our country's affairs, as respected the manufacture of this article, we learned with astonishment that a large consignment of tacks had been received at Philadelphia from England, and some were sent to Boston. On inquiry, we found that a model of our patent tack machines had been taken from this country to England, and there, as we understood, patented, at least used, and the tacks sent here for sale. One or two individuals went to England from this country for that purpose. The effect of this was to stop the manufacture of the article here entirely, and ruin the proprietors of the patents; not so much on account of reducing the price, as for taking from them the home market.

Under these circumstances, we were led at once to look to our Government for relief and protection. In our petition to Congress we stated the above facts, with others; and I recollect of making a statement to the late Hon. Zebdial Sampson, then a member of Congress from this district, of the value of the importation of the British tacks received at Philadelphia, being an invoice of about six thousand dollars, paying a duty only as nails of, I think, four cents per lb., whilst they were sold by the thousand, and one pound of iron would make several thousands of the small sizes of tacks. It was calculated that one hogshhead of rum paid more on importa-

tion than the above invoice of tacks. It was asked in this statement, "Shall the British take our inventions and our market, without paying for them, to the ruin of our own citizens?" We referred to our models in the Patent Office, and stated "that the price of tacks was already reduced fifty per cent., and that machines could easily be multiplied, not only to supply the United States but all Europe."

The petition was referred to the Committee on Commerce, of which the Hon. Thomas Newton, of Virginia, was one, and who is now a member of Congress. Mr. Sampson appeared before them with our statement.

Mr. Newton, who, I think, was chairman, after hearing our statements, exclaimed, as Mr. Sampson informed the writer, "Here is a subject which Congress knew nothing about, until these young men of Massachusetts pointed it out; it requires immediate attention; they have made out their case; they don't ask enough." A bill was immediately reported, fixing the duty on importation of tacks at five cents per thousand, up to 16 ozs. to the thousand, after that at five cents per pound, and also included brads and sprigs. This act passed April the 20th, 1818, and went into operation on the 30th of the following June.

Now, what has been the result of this tariff? In the first place, I am very clear that the articles of tacks, brads, and sprigs, have been sold lower on an average for fifteen years past, than if the British had supplied us. Without the tariff of 1818, the business must have been given up in this country. A steady and extensive market was what was wanted; prices were so much reduced that it required large sales to support the establishments. Iron and labor was lower in England than in this country, and the English had nothing to pay for patents; and, having silenced competition here, they would have charged their own price: it would have been difficult to have revived the business; indeed it never could have succeeded without protection in its infancy.

The prices at which tacks, brads, and sprigs, have been sold for years, and are now sold, are extremely low, just above the price of the iron of which they are made. The profits on a single thousand are estimated by mills not cents. The prices are more than three-fourths less than when made by hand.

In reference to tacks, to which I more particularly confine my remarks, the invention of a machine to make them at one operation ranks among one of the greatest inventions of the country, and justly deserved protection. Tacks, brads, and sprigs, with sparables or shoe nails, are very extensively manufactured. A few years previous to the tariff of 1818, probably less than one hundred tons annually of these articles were made in the United States; now it is computed, and the calculation is below the reality, that two thousand tons of iron are annually consumed in the manufacture of those articles.

Tacks are variously and extensively used, as in the manufacture of hand cards, trunks, saddles, carriages, bellows, cigar and other boxes, brooms, brushes, sieves, and shoes, in fastening carpets, posting advertisements, clothing machine cards, &c.; in short every kind of trade and manufacture wants some, as well as every farmer, stockkeeper, and householder; every vessel that goes to sea takes more or less; about steamboats millions are used, and no doubt future cars and vehicles on railroads will consume millions. But for the tariff of 1818, we must have looked to a foreign nation for this so useful an article, now so cheaply furnished and so extensively used. Brads and sprigs are used for building and ornamental work; sparables or shoe nails, for shoes; and these articles are abundantly and cheaply supplied.

Tacks are applied to a great many uses unthought of until the invention of our machinery; the smallest sizes could not be made by hand, for we can make as low as one half ounce to the thousand. These very fine sizes, which are made of copper as well as of iron, are for water boxes and shoes; shoes require fifty millions of one and a half ounce tacks to the thousand annually, in this State alone, to fasten on the welt of the inner sole of a shoe, which is a recent application of tacks: so there are many other new applications of tacks to uses unknown until they were made by machinery.

By the amount of business done in our two establishments, some idea may be given of the amount of capital it would require to manufacture 2,000 tons of iron, annually, into tacks, brads, and sprigs. We manufacture about 300 tons of iron annually into these articles: we are not in company, but being pretty equally concerned in amount, the statement is made as of one concern. To manufacture this amount requires about \$35,000 to be invested in land, water privileges, buildings, fixtures, and machinery, with tools, wagons, and horses, to transport, exclusive of patent rights:

|                              |   |   |   |   |   |   |   |          |
|------------------------------|---|---|---|---|---|---|---|----------|
| Say for these                | - | - | - | - | - | - | - | \$35,000 |
| 300 tons of iron             | - | - | - | - | - | - | - | 30,000   |

| Iron, steel, files, band leather, oil, and twine                     | 750              |
| Agents to superintend                                                | 1,500            |
| Commissions on sales                                                 | 1,500            |
| Insurance                                                            | 500              |
| Coal, wood, and other items                                          | 1,500            |
|                                                                      | <u>\$100,300</u> |

Hands employed in the two concerns about one hundred.

By this statement, which is intended to be a general outline of our business, or, which is the same thing, of the capital necessary to be employed to manufacture 300 tons of iron into these articles, it would show a capital of \$666,000 invested and employed in the United States annually to manufacture 2,000 tons of iron into the same; but, as our manufacture of 300 tons, or the estimate above, may include more of the finer and more valuable kinds of this business, it would be safe to set down the whole business at \$600,000, and say \$200,000 to be invested in real estate, buildings, machinery, &c., and annually \$200,000 to go for iron and other raw materials, and \$200,000 for labor, including rolling, freight, &c.

This estimation shows an important item of manufacture in our country. Had this branch of business been lost, which is now so extensive and continually increasing, who or what interest would have been benefitted? Not commerce; for the importation of iron from the north of Europe, particularly Russia, employs more navigation than the manufactured articles would from England, and three-fourths of the iron used at present is from this source. After it is manufactured, the tacks, &c. are shipped to all parts of the United States, giving constant aid to internal commerce. This manufacture requires many other materials which is in aid both of commerce and agriculture, as steel, coal, files, iron, cast and wrought, oil, leather, boxes, nails, cotton yarn for twine, corn, flour, and other provisions, &c. &c.

In no country, perhaps, are the articles of tacks, brads, and sprigs, made cheaper than in the United States. The machines for making tacks, as now improved, work with great facility, and their invention does honor to the country. A single machine will turn out 365 tacks per minute, feed itself, turn the plate, cut and head them, all complete. With such machines, aided with American industry, the United States may yet supply the world with tacks; they will doubtless soon become an article of exportation; several shipments have already been made to advantage; others are now in contemplation. This result is owing to the tariff of 1818. It sustained this manufacture in its infancy; but for that protection it would have been lost to this country; and, instead of its present extended state, and the prospect of its sending large supplies out of the country, we ourselves might have been dependant on a foreign nation for tacks, brads, and shoe nails.

But these views are more interesting to the public at large than they are to the manufacturers. The community at the present time receive all the advantage in the cheapness of the articles; competition has always kept down prices below a fair profit. Many have suffered heavy losses, and there are no overgrown establishments. At this very moment many establishments are standing still, because prices are so low, and should the present tariff be taken off, or materially reduced, it would have the effect to raise the price, for many of those now engaged in the manufacture, in view of a foreign in addition to a domestic competition, would abandon the business.

In the two bills reported by the Secretary and by Mr. Adams, the tariff of 1818 is proposed to be continued on these articles. This is sufficient and satisfactory, and the above statement shows that it is judicious; and no doubt a history of many other manufactures would show an equal, if not a more interesting, view of their rise, progress, and present condition, and of the imperious necessity of their protection, not only as it respects the manufacturer, but the whole community.

Your's respectfully,

BENJ. HOBART.

WILLARD PHILLIPS, Esq.

Commissioner, &c.

## DOCUMENT 19.—RHODE ISLAND.

## MANUFACTURES OF COTTON GOODS IN PROVIDENCE.

PROVIDENCE, May 25, 1832.

SIR: Availing myself of the intimation contained in your circular of February 7, 1832, I beg leave, respectfully, to submit my views of the cotton tariff reported by you to the House of Representatives, pursuant to the resolutions of that House of January 19, 1832, as explained in your "comparative statement," communicated on the 3d May, 1832.

By the phraseology of the *proviso* for valuation, the minimum principle of the existing tariff is totally abandoned, and there is substituted for it a principle entirely new to our import system, in an average valuation, which values "all" cotton cloths imported at 30 or 35 cents the square yard, and charges them with duty accordingly. The policy of such a change of principle, after a successful application of the minimum system for sixteen years, may well be doubted, if the permanent establishment of the cotton manufacture is an object of any considerable importance to the Government. That manufacture is indebted to the system of minimums for all its success, from the peace of 1815 to the present time; and its future stability and power of expansion cannot be so well secured by any other mode of assessing the duties on rival manufactures imported.

An average valuation is equally unsafe, whether for revenue or protection; for it necessarily supposes a permanent and uniform relation of currency to commodities, of gold and silver and negotiable paper, which are the measures of value, to objects of exchange and consumption, which are value itself. I need not say that no such perfect uniformity has ever existed or can exist. Money prices were, in 1815, about double what they are at present; that is to say, one dollar would then buy no more than fifty cents will now buy. Supposing the currency of the world to have now reached its highest appreciation, and that, for seventeen years to come, goods are to rise and money to fall, until money and goods shall have the same relation to each other which they had seventeen years ago, the insecurity of an average fixed valuation of any commodity for duties, either as revenue or protection, must be apparent.

At the maximum price of goods, and in proportion as they advance to that maximum, will the ad valorem duty be diminished. Cotton cloths, which are now 30 cents per yard, and, under the bill proposed, would now pay 25 per cent. duty, would rise to 60 cents in current value, and would pay only 12½ per cent. duty, equivalent to 3 3-4 cents of our present currency, and yard square of plain cloth. The system of minimums is not liable to this objection, but secures a just assessment of duties, whether for protection or revenue, in all supposable relations of currency to merchandise. Whether the system of average valuation be adopted or that of minimum valuation retained, the difference in valuation between bleached and colored cloths, and cloths not bleached or colored, is not so great as their relative cost would seem to require, giving only a difference in duty of 1½ cents the square yard, or less than 94-100ths of a cent the running yard—an amount not equal to 25 per cent. on the additional labor and materials expended. With an ad valorem duty of 25 per cent., and a valuation of 30 cents on brown goods, a valuation of 40 cents on bleached and colored goods would place the latter more nearly on an equality with the former than would a valuation of 35 cents.

There is not, I presume, any particular reason, aside from habit, for the discrimination in favor of Nankins. They are not made of American cotton, and have no other recommendation to our favor. The 20 per cent. ad valorem on these goods might, therefore, be expunged without injustice, leaving them to pay duty like other cotton cloths. But the most important feature of this bill as regards cotton goods, one which, greatly beyond the average valuation on cloths, threatens the entire prostration of the spinning of cotton in this country, remains to be examined. The security of spinning involves not only the value of all the lands, fixtures, and machinery employed; not merely the comfortable living of the people engaged, but the domestic market for a large proportion, now one-fifth, of the whole cotton crop of the southern States. The bill proposes an ad valorem duty of 25 per cent. on cotton twist, thread, and yarn, without any valuation, whether average or minimum. By existing laws, these goods imported are valued, uncolored, at not less than sixty, and colored at not less than seventy-five cents a pound, and subjected to a duty of 25 per cent. ad valorem. These duties were imposed by the act of 1816, to which I beg leave to refer. The history and intention of that act as it regarded cottons, will be useful to us on the present occasion. The commercial restrictions which preceded the war with Great Britain, and the war itself, had stimulated the production, in British India, of the inferior cottons of that country, and occasioned immense exportations of those cottons to China and England. The restoration of intercourse between this country and Great Britain brought the yarns and twist manufactured in England from these cottons in direct competition in our markets with goods of similar descriptions, made here, of the very best Ameri-

## DOCUMENT 19.—Continued.

can stock. The difference in quality and wear could not be appreciated, and made no difference in prices, so that what was *apparently* cheaper was preferred. This explains the concurrence of South Carolina, and of members from other southern States, in the cotton tariff of 1816. Those States were threatened with the loss of the domestic market for their grand staple, then (perhaps a little over) estimated at 90,000 bales. It was then thought enough to secure the coarse cloth by a duty of  $6\frac{1}{2}$  cents the square yard; but that, to be effectual, the minimum principle should be extended to yarns, and they were accordingly subjected to the valuations and duties abovementioned. Had the latter been omitted, the former would have been entirely fruitless, for the yarns would have been imported and wove into cloth here. In consequence of this protection on such yarns, and of similar or equivalent tariff restrictions imposed in other countries, the English were obliged to discard the India cottons, and to make their goods from stock of better quality; and the annual import of those cottons into England is now perhaps less than 40,000 bales. But should our Government, abandoning the principles of 1816, adopt the proposed tariff, this business of making *cheap yarns* for the American market, would be revived in England. These yarns could be imported on the beams, and woven into cloth in this country. That cloth, vastly inferior in value to the cloth made of homespun yards from American stock, could be sold at a lower price for an equal surface. The inferiority of the fabric would escape detection, and purchasers, tempted by the apparent cheapness of the goods, would prefer them to the more substantial and durable cloths made of American yarns. The difference in the cost of stock between American and English yarn would pay the duties and charges, and the weaver would thus obtain, for an article of no more than half the intrinsic value, a price nearly equal to that of the best American stock and fabric. The amount of capital and labor which would be displaced in this country by a prostration of the cotton spinning, would be about four-fifths of the capital and labor now employed. It is calculated that the hands and machinery engaged in spinning bear that relation to all the hands and machines engaged in the manufacture from raw stock to finished cloth.

The proposed average valuation and duty of  $7\frac{1}{2}$  cents the square yard, would therefore be deceptive and illusory, under an ad valorem duty of 25 per cent. on yarns, without a minimum valuation; by which, in some cases, the yarn for a yard of cloth could be imported at a duty of only one cent. And the practical effect of the tariff on cottons, taken as a whole, would be a virtual reduction of the duty on cloths of an average value of 30 cents the square yard to  $3\frac{1}{2}$  per centum ad valorem.

These, sir, are some of the reasons, founded on a long experience in the cotton business, which induce me to apprehend the most ruinous consequences from the adoption of the proposed bill, especially as respects the duty on yarns. But I am persuaded that your own, and the patriotism of Congress, would revolt at consequences so disastrous, when clearly and plainly shown as the probable results of any measure proposed. I know that the prosperity of the cotton manufacture is considered important to the whole country, and an object to be secured if possible. I have endeavored to place the subject before you in its proper lights; and I now leave it with a full reliance on the integrity and national pride of those who sit in the high places of the land, and rule the destinies of a numerous and growing community.

Very respectfully, your obedient servant,

SAMUEL SLATER.

To the Hon. LOUIS McLANE,  
*Secretary U.S. Treasury.*

## DOCUMENT 20.—NEW JERSEY.

REVIEW OF THE TARIFF POLICY, BY ANDREW GRAY, OF NEWARK.

NEWARK, April 28, 1832.

SIR: Having been invited in your late circular to accompany my report of the facts and information that should be obtained in the State of Delaware, on various matters connected with the manufactures of the United States, with such suggestions, in a separate communication, as

I might think useful in the adjustment of the tariff on right principles, I have hastily drawn the following remarks, and respectfully submit them.

2. It is to be deeply regretted, sir, that there is so wide a difference between the representatives in the National Legislature, and between their constituents also, in regard to the principles on which the adjustment ought to be predicated, and the best mode of carrying those principles into effect. They are, in these respects, the antipodes of each other. But it should be remembered that, in this division of sentiment, it is seven States of the republic, and their representatives, who are arrayed against the remaining seventeen States, and the representation chosen by them. It should be recollected, also, that the united white population of these seven States amounts only to 2,520,089, who will, as provided in the federal constitution, at the proposed ratio of one representative for every 47,700, should it be established, be allowed twenty members in the House of Representatives on account of their colored population, more than they would be otherwise entitled to—an advantage which goes to increase very much their weight and influence in legislating on the national concerns. From this number 8 members, to whom, for the same reason, the seventeen States are entitled, being deducted, the number will be reduced to 12 representatives. The number of whites in the last named States, after deducting the colored population, is 7,903,628: less than one-fourth part of the white population of the United States, is, then, to be opposed in the approaching conflict respecting the modification of the tariff, to something more than three-fourths; that is to say, 2,520,089 to 7,903,628. And the 2,520,089 threaten to separate themselves from the 7,903,628, and to dissolve the Union, should not the latter succumb to the policy and views alleged by the former to be most in accordance with the provisions of the constitution, and most conducive to the general welfare.

3. It will not be impertinent to remark here, that, were the federal constitution to be framed at this day, there is the best reason to believe that the concession which gives to the slaveholding States the advantage just stated, would not be made. When it is considered that a major part of the inhabitants of some of the States is colored people in a state of bondage, and that in the rest they approach nearly to an equality with the whites, the concession cannot be regarded, in a republic like this, as unequal and unreasonable. Slaves being denied civil and political rights, and regarded as property, as well might a representation have been asked by the southerners for their flocks and their herds. Nevertheless, no disposition has been manifested by the non-slaveholding States to amend the constitution, by ridding it of the exceptionable feature; and I have adverted to it only to place in the stronger point of view the reprehensible anti-republican course which the minority, with this advantage on their side, threaten to pursue.

4. The duties laid on imports have not hitherto been too high to provide a revenue proportioned to the exigencies of the Government—an amount of money sufficient to pay off the annual appropriation for the extinguishment of the principal and interest of the public debt, and to meet all other demands on the national treasury. And it may be observed, that it is not the amount of revenue which the duties have brought into the Treasury that has been complained of at the south; but those imposed on cotton and woollen, on hempen and flaxen fabrics, on sugar and iron, have been particularly objected to. These have excited the discontent of the southerners; these produced their clamor against the tariff, and the abuse inflicted by them is unsparingly on the majority: with what reason is a fit subject for present inquiry.

5. The duties referred to, and all others imposed with a similar view, partake of a double character—fiscal and protective. They were designed for revenue and for the protection of American industry; and it is their protective character which has rendered them unpopular at the south. In this character they were intended to give encouragement to domestic manufactures by gradually diminishing the importation of the like productions of foreign countries, and finally excluding them from the market of the United States. They were intended also, through the encouragement afforded to domestic manufactures, to advance the interests of agriculture and the mechanic arts, as well as to promote the commercial intercourse of the States, by means of the coasting and inland trade. It was thought, too, that, in the benefits to be extended to agriculture, the planters of cotton at the south would not fail to share, from the additional demand that would be created for that staple. In this sentiment, unfortunately, they have not concurred, the cotton planters in Louisiana excepted. What was intended to be, and what has already, indeed, been productive of great advantage to the free people in the eastern, middle, and western States, by diversifying their employments, and calling into action their capacities, by stimulating their industry and whetting their ingenuity, and consequently contributing to the wealth and prosperity of these States, is, in the opinion of the planters in the seven discontented States, destruction to the products of the labor of their slaves, and death to all their golden prospects. At this conclusion they have arrived by the following process of reasoning:

6. In a tabular statement of the exports of the United States, cotton, rice, and tobacco, constitute the larger portion of them, being in value about \$36,000,000. With these the imports, consisting of cotton and woollen fabrics, iron, cutlery, hardware, and various other articles of merchandise, are purchased in Great Britain and other European countries, but principally in Great Britain. The imports from these countries being proportionably large when compared to those derived from other nations, and yielding a larger amount of revenue, the southerners, because they have been received in exchange for their staples by the shippers and merchants, (who have paid the planters for them in money or merchandise) claim to themselves the credit not only of the commerce produced by these exchanges, but the payment of the greater part of the duties collected from it, although, as consumers, they and their negroes do not make use of a fourth part of the imports, and of course cannot contribute in a greater ratio to the revenue than they consume the goods on which it is collected. The truth of what is here asserted is susceptible of the clearest demonstration.

7. The whole population of Virginia, the two Carolinas, Georgia, Alabama, Mississippi, and Tennessee, the States in which alone there is a decided hostility to the protective policy, amounts, by the last census, to 4,169,538 souls, of whom 1,649,449 are negroes and mulatto slaves, except 83,659, who are free. That of the other States is 8,541,681, of which number 638,053 are colored people, 228,414 of whom are free, and the residue, 409,639, in a state of slavery.

8. There are few cities, towns, and villages, and no manufacturing districts, in the seven dissatisfied States. These are to be found principally in the States situated to the north of the Potomac, and abounding with a numerous free population, who consume more imported goods than do the same number of people scattered over the country, milk being substituted in their diet, by the greater part of the latter, for coffee, tea, and sugar, and household manufactures made use of in their apparel, instead of imported articles. Besides, the food and raiment of the colored people at the south are of the coarsest quality and cheapest price. They consume no groceries worth mentioning, and but a very small quantity of imported dry goods. This part, then, of the population in the seven complaining States, which wants but 49,917 of being equal to two-thirds of all the whites, pays a very inconsiderable portion of the duties on imports, and cannot, consequently, be considered of much importance in a fiscal point of view. It will not be unfair, therefore, to conclude, that the consumption of imports by the people in these seven States does not exceed a fourth part of what it is in the seventeen States; nor can the addition made to the revenue in that section of the Union, by the payment of duties, be in a larger proportion. Have they any just cause, then, to complain of the operation of the tariff? Can it be true that it presses on them more heavily than on the people in the tariff States? Certainly not. Nor can I persuade myself that the candid reflecting men among them are under such an impression. I will not say that the southern planters have not been depressed. I believe they have; but not more so than the farmers in the grain-growing States. The staples in these States, with the lands that produced them, have suffered as great a depreciation as the lands and staples of the south. Since the turn of things which ensued shortly after the conclusion of peace in Europe, in 1815, it has been with great difficulty that the farmers have made out to live. Great numbers of them, who had lived too freely, or embarked in wild speculations, and thereby involved themselves in debt, were ruined. And to this day, a farmer who is so imprudent as to contract debts to any serious amount, runs the risk of an entire sacrifice of his property. But this state of things has not been created by a protective tariff; so far from it, the protection given to domestic manufactures has, in conjunction with internal improvements, been the principal cause of what little prosperity has fallen to the lot of the farmer. And if it has not been participated in an equal degree by the planters at the south, (to say nothing of the character and habits of the southern people) the reason may be found in the want of manufacturing establishments located among them, and their having made little or no progress in internal improvements. Establishments of this kind in other parts of the United States have, however, created a large demand for cotton, their principal staple, which, united with the foreign call for that commodity, gives them a more extensive and certain market than is enjoyed by the grain-growers of the middle and western States. But for the extension of the cotton market by the demand of the domestic manufacturers, now estimated at \$14,000 bales, exceeding one-fifth part of all that is produced in the United States, the price would have been brought down lower than it is, and the profits of the planters correspondently reduced. There is another advantage they have derived from these establishments too important to be overlooked. The cotton and woollen fabrics manufactured at them, and consumed largely at the south, have been of better quality than like goods imported from Great Britain or elsewhere, and sold also much cheaper than the foreign would have been without the domestic competition.

9. To these advantages the southerners appear to be insensible, or rather they do not admit them to be such at all. Their cry is for a free and unrestricted foreign trade, which cannot be had without the consent of foreign nations. Our ports may be opened to them, and the duties taken off their productions when imported, but they will not reciprocate the favor by granting the same privileges to our ships and commerce. And unless this be done, the advantages of the commercial intercourse to be carried on would be all on one side—a free trade to foreign nations, but a restricted one to the United States.

10. The evil would not end here. No let or limit being set to the importation of foreign productions, they would be imported in such quantities as to exceed the wants of the country, and to glut the market. The effect of this would be to check the industry of our own people, and, by diminishing its products, to restrain and lessen the domestic trade, which, from the expansion given it by the protective policy, is now so free and flourishing between the several States. What is so promotive of the general welfare does not, however, correspond with the views which the southern malcontents have taken of their own interests. The general welfare, it is but too apparent, is not the object of the policy for which they contend. Their system, in reference to the people of the other States, is selfish, ungenerous, and unwise. It is to look to foreign marts exclusively for the sale of the commodities they grow, and to depend on foreign labor alone for supplying the necessities, comforts, and superfluities, which they want the industry, ingenuity, and enterprise, to produce for themselves. The continued introduction of the products of foreign labor, without restraint, is essential to its success. The people in the tariff States must cease to manufacture for themselves, and go on to purchase and consume them, or southern staples cannot find a market in Great Britain. If British manufactures should not be taken in exchange for cotton, for rice, and tobacco, the British merchants and manufacturers *cannot, or will not, purchase them with gold.*

[With as much reason might it be alleged by the British manufacturers, that if the importation into Great Britain of the bread stuffs, &c., of Pennsylvania and our other grain-growing States be prohibited, they will be thereby deprived of the means of importing their manufactures. It is known, however, that, notwithstanding this disadvantage in their commercial intercourse with Great Britain, these States have imported, and continue to import largely, British manufactures; that there has been an annual balance against them in their commerce with Great Britain, and that this balance has been discharged from the profits of their trade with other nations. And it may be observed, that, in the commercial intercourse of nations, it can rarely, if ever, happen that the exchanges in the commodities of any two of them will exactly balance each other. It may be added, that the balance against one has invariably been extinguished by the proceeds of a more gainful commerce carried on by it with others.]

11. We have arrived now at the true source of the apprehensions and discontents of the southern planters. They are dissatisfied because they are afraid the British market will be lost for the few objects of culture on which the labor of their slaves is employed, unless the protective policy be abandoned. Nothing short of this will satisfy them. An abolition of the duties on such imported articles only as do not enter into a competition with domestic manufactures, will not answer their purpose. The duties laid for protection must be reduced below the point of efficiency, (which is equivalent to abolishing them,) the consequence of which they well know would be the destruction or declension of the various manufacturing establishments in the United States. They also know, or ought to know, that their ruin, or even declension, would have effects the most disastrous on the interests of agriculture—the farming interests I mean. It would operate to their prejudice in a two-fold way: 1st. It would deprive agriculture of a consumption of its products, proportioned to the number of manufacturers and their operatives thrown out of employment. 2d. It would convert the most of these into cultivators; and, from the joint operation of the two causes, over-production and a glutted market would inevitably follow. To the wilderness the manufacturers and able part of the males in their service would have to go. The most of them could find employment for their capital and industry nowhere else. The females and children, so numerously and advantageously employed in factories, especially cotton establishments, would many of them be left behind, to become, from wanting the means of support, the tenants of charitable institutions, or be consigned to prisons and penitentiaries by the vices contracted from idleness.

12. Coupled with a redundancy of agricultural produce that could not find a market, and that would consequently be useless, would be the declension of commerce, foreign and domestic. As manufactures give life and encouragement to agriculture by furnishing consumers of its products, so do they both, in the materials they supply, lay the foundation of commerce, and chiefly support its existence. No State can ever attain to a great degree of wealth and power without fostering conjointly these three sources of national prosperity. If properly encouraged they exert an influence promotive of each other, and cannot fail to raise an extensive commerce.

nity like this, with the aid of wise political institutions, to the highest pinnacle of human happiness and grandeur.

13. Cotton, the principal staple of most of the southern States, is imported into Great Britain for the employment and enrichment of her people. More of them and their capital are employed in manufacturing it than in any other branch of manufactures. The fabrics, fine and coarse, turned out from her cotton factories exceed, annually, in value, it is said, \$160,000,000. Of this amount, much the greater part finds a profitable market within her own dominions, which is secured to her manufacturers by prohibitory laws. The residue is exported to foreign countries, of which the United States take annually between seven and eight millions, a mere trifle when compared to the whole. The entire loss of the market in the United States, in consequence of full supplies of cotton goods furnished by our own factories, should it take place, cannot be expected, therefore, to seriously affect the cotton business in Great Britain. It will go on, and the demand be continued and increased for many years to come for the raw material, which can no where be procured in quantity and quality equal to what it may be in the United States, and will, for that reason, be sought there and preferred. The fears of the southern planters lest the British manufacturers should not purchase with gold a material from them that is indispensable to the lucrative operation of their most extensive and valuable factories, if it cannot be obtained in exchange for their fabrics, may therefore be regarded as entirely groundless. Yet, under the influence of these unfounded ill-boding apprehensions, they would overturn, by taking away its efficiency, the system of protection which dates its origin from the first session of the first Congress after the federal constitution went into operation, and since that time has been growing by degrees to its present maturity. With its destruction, the various branches of domestic industry it was intended to foster will be most injuriously affected, if not ruined. Such, nevertheless, is the unhallowed design of the southern anti-tariffites, in which they are supported by the free-trade men, natives and foreigners, in the other States. This is the object at which they are aiming, and unless it be accomplished, and the importation of British fabrics such as are manufactured in the United States be continued, the exchanges to which they attach so much importance will not be perpetuated.

14. When, therefore, the deadly blow meditated against American industry by its enemies, domestic and foreign, in the modification of the tariff, rendered necessary by the new state of things arising from the near approach of the extinction of the public debt, is considered, the friends of protection, seeing the importance of the crisis, must perceive also the necessity of vigorous and united exertion, to prevent a catastrophe that, if not averted, will prove disastrous in the extreme to the country. It is, indeed, a question of life and death, in respect to the great leading interests of the nation, that is at issue between the advocates and opponents of the American system. What was an event of joyful anticipation (the extinction of the public debt)—what, on its taking place, will leave the resources of the United States free and unincumbered, to be applied in the ways that shall be judged best to improve the face of the country, and promote the general welfare, has, through the insatiation of the minority, become the source of dissensions, which, if not allayed or controlled by an energetic, decided course on the part of the majority, may lead to the dismemberment of this great and admired republic. This is an event that can be desired by none, and is to be deprecated by all, because every one must be sensible that the evils it would be productive of are beyond the power of calculation. Shall the majority, then, be deterred by the clamors and menaces that have been so loudly uttered at the south, from steadily pursuing a scheme of policy, the deep felt national distress produced by the want of which was one of the chief causes that gave birth to the federal constitution; and to adopt which policy, after the constitution went into operation, there was an almost instantaneous and universal call by the various classes of citizens in the Union? Since the interests of agriculture, manufactures, the mechanic arts, commerce, and navigation, have all, for more than forty years, experienced its fostering, beneficent effects, will they, yielding to southern delusion, got up partly by wrong-headed, theoretical lawyers, (not men of practical knowledge,) and in part by foreign influence, be driven to abandon it? It is believed they will not, and certainly ought not. It should be borne in mind that the majority is not a feeble one. It is numerous and powerful; and the case in which it is required to act is not one that admits of compromise. Concession cannot be made, or, if made, it would be in effect to foreign nations, who would profit by it, and not to the minority, to whose prejudice, as well as that of the majority, it would most assuredly operate. The industry of the latter being paralyzed by the imprudent concession, slave labor, on which the former are exclusively dependant, could not avoid its injurious effects. The domestic demand for cotton, the great southern staple, would be diminished. More of it, from that cause, would be exported to European markets, in which, the supply outstripping the demand, the price would decline. And the com-

petition of the domestic manufacturers of cottons and other fabrics being lessened, foreign goods of like kinds would come more into demand, and bring more in the American market.

15. Could the advocates of protection meet their opponents on middle ground, without sacrificing the interests requiring to be sustained by legislative succor, which cannot be done, because the duties imposed must be high enough to be efficient, or they would be worse than useless—still this would not do. It would be no more than a small advance towards a compromise. Protective duties, as such, are denied by the southerners to be constitutional; and, if necessary, if not avowed purpose, is to destroy manufactures. Without this is effected, Great Britain, the principal mart for their cotton, rice, and tobacco, will not, according to their commercial creed, be furnished with the means of taking them. She will give her fabrics in exchange for them, but not her gold. These must be imported without restriction, and consumed. Our manufacturers must be broken down, their capital rendered useless, and the people in the factories discharged from their service to look for employment elsewhere, if they can find and pursue it; but, if not, to perish for the want of it. A hard case, surely, and one that, if permitted, would bring everlasting reproach on the majority.

16. There was a time when, in every State of the Union, the doctrine was fashionable that the necessities and comforts required in our state of society should, as far and as fast as the circumstances of the country would admit, be produced by our own people. It was a false idea that their industry should be encouraged, and the United States rendered independent of foreign labor for all essential supplies. The public sentiment at the south on this subject has within a few years, undergone a great change. Of this the introduction of the cotton plant and the extensive cultivation of it, have been the principal cause; *its culture* is to be encouraged and sustained *now*, although every other branch of American industry should be promoted. The wants of our people are to be chiefly supplied by exchanging it for the various European fabrics in demand, because (as the southerners maintain) they can be imported cheaper than they can be manufactured in the United States. Could this be done, which is not *admitted* unless a sacrifice be made by the importer, or the duties be eluded, it would be unwise in Government to permit the products of domestic industry, which used its interference, to be crushed by an unrestricted importation of similar wares. The difference in price would be a little or no consequence among ourselves, so long as the domestic articles should not *curb* the consumption of the country, the advantages arising to our citizens, in many respects, for their production being more than a compensation for that difference. When they *reach* that point, and the surplus to be disposed of must be exported to foreign markets, it becomes important, relatively, to other countries where like articles are grown or manufactured, that they should be afforded low enough to enter into a successful competition with them.

17. The southerners, in discussing the subject of protective duties, do also speak of *them* as having been imposed for the sole advantage of the manufacturers, which is not true, the agriculturists, mechanics, artisans, and laborers, partaking very largely of their benefits, and, indeed, every other class of citizens in some degree, either directly or indirectly. For this reason they are more properly to be regarded in a national point of view, than as favoring the interests of the manufacturers only.

18. Protective duties operate on foreign manufacturers by reducing their prices and profits, otherwise their fabrics could not be imported so as to enter into competition with domestic manufactures. This circumstance, combined with the competition, the effects both of the impost brings the price down in the market, and favors instead of oppressing consumers.

19. When protective duties have performed their office in part, or in whole, by diminishing the importation of foreign rival productions, or by excluding them altogether, why should they, as recommended by some who profess to be friends to domestic industry, be either *abolished* or reduced? They are not to be considered as taxes, (in which light they are constantly represented by the advocates of free trade) and can do no harm, but may do good by preventing *it*. So far from operating as taxes, domestic productions that have been efficiently protected are now selling, some at prices very little exceeding the impost, while the market price of *others* is below it; for instance, cotton cloths of the coarser kind may be had of good quality *for* *less*, that is 3-4 cts. below the duty per square yard. So nails, glass, gunpowder, chemicals, and other articles of domestic manufacture, protected by adequate duties, if not reduced in price below, or to an equality with, the duty, bring but a small excess beyond it. Why, then, it is asked again, should these duties be abolished or reduced? Should they finally exclude foreign, they will not destroy domestic competition. Not only so, being retained they will serve as safeguards to prevent the intrusion of foreign goods, when gluts in foreign countries are occasioned by over-production or other cause. These must be disposed of at a loss, or perish in the hands of foreign manufacturers; and, if not prevented by restrictive duties, would inundate the country like the swellings of the rivers and the inundations of the sea, when not resisted by banks and mounds.

## DOCUMENT 20—Continued.

20. The effect of this tariff on the culture of cotton is known. That it continues to be prosecuted, and annually extended, shows that it is too profitable to be relinquished. But should the protection given to manufactures be reduced below the point at which it is efficient, (beyond which it is believed not yet to have been carried) although it is well understood that the effects of the reduction would be pernicious, yet the extent of the injury that might ensue cannot be fully anticipated. Whatever depression may have been experienced by the planters of cotton, (to be ascribed principally to over-production) still they go on. But the most of the manufacturers, if not obliged immediately to wind up their business, would ultimately, it is apprehended, be reduced to the necessity of abandoning it.

21. A reduction, however small, of the protective duties would be viewed in Great Britain and other foreign countries as indicating a change of policy in our Government, and encourage their merchants and manufacturers to surcharge the American market immediately with their wares of rival character with domestic productions. These, after being imported and entered at the custom-houses, would, as every one knows, be sent straight to auction, and struck off to purchasers at whatever price they would bring in cash; the importers, by the by, having the advantage of long credits on the bonds given for the duties. The consequence of this would be, that domestic manufactures could not find a sale in their own market, which ought to be secured to them, except at ruinous prices. A general shock would take place among the manufacturers: the operatives, artisans, and laborers connected with the factories, would be deprived of employment; and the metallic currency, as it has always happened after excessive importations, be drained from the country to make up the deficit of exports in paying for the imports. The banks being disburdened of their specie, would of necessity be compelled to curtail their discounts, and call on their debtors for the payment of their notes. A general stagnation in business, and bankruptcy, its never failing concomitant, might then be expected to follow.

22. The doctrine of the constitutionalists at the south in regard to protection, is, that the Federal Government possesses no power directly to extend it to manufactures and other articles of domestic production. They may be encouraged incidentally through the operation of duties laid for revenue; but revenue alone must be the object of laying them. When, therefore, a revenue is not required by the exigencies of the country which would warrant the imposition of duties high enough to be adequate to protection, the Federal Government can give none. And as the States, in adopting the constitution, divested themselves of the power they antecedently possessed, of counteracting the policy of foreign Governments through regulations of commerce, by means of the imposition of duties or otherwise, there is no power in the State Governments to protect domestic industry. Being possessed, then, by neither the Federal Government nor the State Governments, domestic industry can be pursued only at the mercy and by the sufferance of foreign nations. It is utterly defenceless and hopeless. Can this be true? I think not. Without referring to those grants of power in the federal constitution from which the friends of the American system derive the right to protect domestic industry against the rivalry of foreign labor, I contend that this great republic, whose constituent members are the States, and which, by the act of constituting it, became merged in its existence, and denationalized, so far, at least, as respects foreign nations, possesses, in its own sovereign and independent character as constituted, full authority to protect the property of its citizens on land as well as by sea; and that the denial of it in the former, while it is admitted in the latter case, involves absurdities too gross to require a refutation. It is tantamount, if property be identified with the persons who own it, to not allowing it (the republic) the right of self-preservation. For if the Government cannot, by commercial regulations, under the form of duties or prohibitions, or, in other words, countervail the policy of other nations, when operating to the injury of American interests, or any portion of them, it is destitute of this right, a right which, by the law of nature, holds the first place in the catalogue of human rights, whether mankind be considered individually or associated in communities.

23. It is for the interest, let it be repeated, of the people of every country which claims the attribute of sovereignty, to be as little dependant as possible on other nations for the necessities, comforts, and even superfluities of life. It forms its own political institutions, enacts its own laws, and controls its own citizens, in their trade with one another. In these respects, it can have nothing to do with the concerns of other nations. It has no power to interfere in them, so as to dictate their forms of government, their municipal laws, or their commercial codes. The utmost that one independent community has a right to do in respect to other such communities, is to cultivate peace and commerce with them, and so to regulate its relations with all, by treaties and conventional arrangements, as will best promote those objects. The welfare of its people can be better provided for by directing its chief attention to their internal affairs, in cherishing the various branches of their domestic industry, and promoting, by affording facilities to, their commercial intercourse at home, which it has the power to regulate, than by

seeking it in a too eager pursuit of foreign commerce, over which it can exercise no further control than is accorded by foreign nations. By pursuing this course, it enhances in reality its facilities for carrying on a lucrative foreign trade, which consists in exchanges of the surplus productions of one nation for those of other nations, according as their mutual wants can be supplied each by each.

24. Much sympathy has been expressed for the poorer classes of citizens, because, in adjusting the tariff, higher duties were imposed on the coarser cotton and woollen cloths than on the finer. In this Congress manifested their wisdom, as, on several accounts, it suited the manufacturers best to commence first with the coarser. No disadvantage has resulted to the poor from this cause, the manufacturers concerned in cotton and woollen establishments, and others, having given them more employment and better wages than they would otherwise have obtained. This benefit would have more than counterbalanced the evil of higher prices had they really existed; but, if there be any truth in the foregoing statements and remarks, these fabrics have been afforded not only cheaper but of better quality than they would have been had there been no domestic competition: for it is well known, that high duties, when not evaded, have a greater effect in reducing the prices of protected articles than moderate ones. But the enemies of the protective policy uniformly represent high duties as high taxes, making no distinction between those laid for protection and those for revenue only: for instance, on imports the like of which are not grown or manufactured in the country, such as teas, coffee, &c. On these as well as on manufactures or agricultural productions in their inchoate state, high duties, if laid, are admitted to be high taxes.

25. Another objection made to high protective duties is the danger of smuggling occasioned thereby. This has been so often urged, and, in my estimation, has so little weight, that I shall pass over it, by simply observing, that smuggling has, in all countries and under all tariffs, been practised to a greater or less extent, according to the opportunities presented of evading their revenue laws, and to the greater or less degree of vigilance and fidelity exercised by custom-house officers in executing them. The revenue of the United States has been a great deal more defrauded by means of the false invoices of importers than by smuggling. This is so notorious that Congress ought to meet the case promptly with new legislative provisions for enforcing more strictly the revenue laws, so as to prevent frauds in future.

26. It has been said, that iron manufactured beyond the mountains, or far in the interior, is not within the reach of competition by imported iron, because the carriage of it, in its different forms to distant places from the points of importation, would, on account of its weight, be too expensive to be borne. This was true before the construction of canals and railroads, and the propulsion of boats and cars by steam. These improvements have made the transportation cheaper, and in proportion as they progress the expense will be still further diminished. It deserves consideration, therefore, whether, under this altered state of things, there be no danger of competition. The domestic supply of this article, in all its forms, has, in consequence of the additional protection given in 1828, been very much increased. It is now quadruple in quantity what is imported. The iron-masters have not had time to supply fully the demand of the country for it yet, though competent to do it in a little while, should the protection given be not withdrawn. And if the importation of foreign iron has increased, (much has been imported under surreptitious names to elude the duty) it is because our population has been increasing and with it the demand. Meanwhile the duty, with all the evasions of it by fraudulent importers, has been operating on the foreign iron masters. Their profits have been diminished, and, from the competition created between them and the domestic iron-masters, the supply having been greatly augmented, the price is reduced to consumers.

27. The same may be said of sugar, which has been adequately protected. More has been thrown into the general market of the commercial world in consequence of the cultivation of the sugar cane, and the manufacture of that commodity in Louisiana, which has caused a depreciation of it. But should the duty be reduced, the planters there will be no longer able to sustain a competition in our market with the West India planters, where the climate is more genial to the production of the sugar cane. They would be compelled to relinquish the business, now considered profitable, even at the present reduced price of sugar, and of great advantage to other parts of the Union, by reason of the freights it gives to a large coasting and river tonnage, and of the various supplies furnished by the farmers and manufacturers for carrying it on. The capital and labor thus employed would, as an only resource, be transferred to the culture of cotton, which would produce a further depreciation in that article by adding to its already excessive production. The property in slaves would, from the same cause, experience a similar fate.

28. Salt is a necessary for the supply of which the United States should look to their own citizens, who can manufacture it to the full extent demanded by the country if suitably encou-

raged. The reduction of the duty on it has not been followed by a declension in the price, and was, in my opinion, unwise, as it would be still more so to reduce it further; for it might prove destructive to the manufacture not only on the Atlantic coast, but beyond the mountains also, for the reasons assigned in respect to the transportation of iron.

29. Hemp and flax, and the manufactures thereof, being indispensable articles in furnishing vessels of all descriptions, national and mercantile, with their tackle and apparel, their protection ought to be efficient. As established at present, the duties on the raw materials may be too high for the fabrics manufactured from them. In that case, I would say, raise them on the latter, so as to countervail the protection given to the former, which should be retained; and so in regard to all manufactures the materials of which are domestic, and require for their support legislative interference. As a further instance, take the different kinds of cutlery manufactured from iron and steel; don't lessen the protection afforded to these materials of ruder manufacture, but increase it on the finer.

30. The high impost on indigo and coarse wool, the first produced to a very small extent, and the second not grown at all, in the United States, is injudicious, and should be lowered. The ingredients and raw materials of manufactures, if not found or produced in the country, ought not, on their importation, to be taxed at all, but, for the promotion and encouragement of the fabrics for which they are required, should be permitted to be imported duty free.

31. Stone coal is to be found in inexhaustible quantities in many parts of the United States, particularly in Pennsylvania. The regions in which it, as well as iron ore, abounds, are so sterile as to be otherwise of no value. A great number of quarries have been recently opened, the proprietors of which are working them advantageously; and the facilities of transportation to the principal seaports, by canals and railroads already constructed and constructing, are such that an abundant and cheap supply of this valuable commodity in every part of the Union where it is wanted, and for exportation, may soon be confidently expected. I should deem a reduction of the duty on it, therefore, highly impolitic.

32. I might go on to take a particular notice of leather and its manufactures of hats, caps, and bonnets made of grass, of the manufactures of brass, copper, and lead, and of every other production embraced in the circle of American industry, but I shall decline the tedium of a further detail. They all look to the Government for support; they all claim its protection, and they ought all to receive it—not a doubtful, feeble, or intermitted protection, but one that is certain and steady, full and efficient.

33. Hitherto the various branches of American industry have been fostered by the Government as its succor was needed. The protection given was small at first, afterwards more was given, as more, from time to time, was required, until the protective tariff was raised, in 1828, to what it now is. The staples of the south have been as well or better protected than the productions of the north. All have shared the kind parental care of the Government, and all have prospered under its wise enactments. Its wisdom has been exerted abroad, also, in placing the commerce of the country, by treaties and commercial arrangements with foreign nations, on the most advantageous footing that was practicable. Having performed its duty in manner and degree as described, the various classes of citizens have been left free to engage in whatever pursuits suited them best, and to dispose of the products of their labor at home and abroad, wherever it could be done most profitably. None, then, have a right to complain. The Government having done all it could do to sustain and promote the interests of all, if all have not been equally benefitted it must be ascribed to the kind, quality, and quantity, of their respective productions, to the demand for them in the domestic and foreign markets, to their facilities of transportation or their want of them, and to their own peculiar character for intelligence, industry, enterprise, and economy. Without being distinguished for the latter, it is impossible that any people, under any system of public measures, however wise, can prosper and flourish in an equal degree with those who are thus characterized. In these respects, the southerners are inferior to the people of the eastern, middle, and western States; especially the former. In the six New England States it is a rare thing to find an adult who, if not liberally educated, has not had the benefit of a good English education. The diffusion of knowledge by means of schools and seminaries of learning, established wherever wanted, has, from the first settlement of these States, been an object of primary concern with the people thereof. The fruits produced by the system of education established, have corresponded with its excellence. Its advantages, combined with (what appears like a paradox) the sterility of their soil and ungenial climate, have been the principal sources of their prosperity. Their ingenuity and invention, whetted by the first cause, and their industry stimulated by the second, there is no country, no sea, no climate, contiguous or remote, which has not witnessed their enterprise. Denied by the barren region they inhabit, and its cold northern situation, the benefits imparted to the people of the other States by more fertile lands and a milder climate, the fisheries, navigation, commerce, manufac.

tures, and the arts have all engaged their attention, and given diversified employment to their capital and industry. Contrast the condition of the people of the south with theirs, and it will be seen how little enviable it is in a comparative point of view; how little they have effected in disseminating the benefits of education among themselves (the opulent excepted); how little they have improved the natural advantages they enjoy; how little they have done and are capable of doing, to administer to the various wants of civilized society! The sons of the wealthy have been sent mostly to the northern seminaries for instruction in classical learning and the sciences, but the mass of the people, for the want of elementary schools and scientific institutions, have been condemned to a state of gross ignorance. In the manual labor performed by their slaves and directed to the culture of a few staples, their industry almost entirely consists. Having no concern in manufacturing establishments, nor acquaintance with the arts, scientific power, productive of such wonderful effects when applied to these, is lost to them, with all its benefits. Nearly as little interested in commerce and navigation as in manufactures, the few staples they raise are not transported to distant marts by themselves, and exchanged for the wares called for by their wants, or the wants of the country. They are disposed of to merchants and shippers from the eastern and middle States, and to foreign agents, who transport them to the ports in those States, or to Great Britain and other European countries.

34. Is the minority, then, constituted and characterized as above described, possessing as undue representation in the National Legislature, partaking of the burdens arising from taxation in a slighter degree than their brethren of the majority, and sharing with them the benefits of governmental protection in at least an equal degree—is the minority, I say, the seven discontented States, to be indulged by the seventeen States that are in favor of adhering to the long settled policy of the protective system, in their demand of a surrender of that policy, in the continued support of which is involved their best interests? No; the surrender cannot be made. The representatives of the majority in the National Legislature, unless they betray their trust, can never consent to the ruinous sacrifice. Were the majority to yield now to the complaints and menaces of the minority, the precedent, once set, might lead to the worst consequences. It would be relied on hereafter, there can be but little doubt, by minorities on trying occasions like the present, to sustain them in thwarting and defeating the measures of majorities, and would subvert, thus, the fundamental principle of the Government, by substituting the will of the former for that of the latter. For this the southerners are now striving. Formerly, in the Convention which formed the constitution of the United States, they asked for a disproportionate representation in federal legislation, and it was conceded to them. What have the free States gained by making that concession? Nothing—worse than nothing, for it has emboldened the southern slaveholders to rise in their demands. Then there could be no constitution formed unless this unfair concession was made and ingrafted in what was to become the fundamental law of the Union. Now, the principle that the majority shall rule, the great distinguishing feature of republican government, must be given up, or the Union must be dissolved.

35. The people of the United States are truly in a most deplorable dilemma. If the majority pursue on the question of protection, as I maintain they ought to do, a firm, uncompromising course, (for reasons already assigned) it will, if the southern malcontents are to be credited, be death to the republic. On the other hand, should they, consulting their fears, impudently yield, there cannot be a doubt of its dissolution. The character of the Government will be gone. It will be converted into an oligarchy, and one of the worst kind—a Government of aristocratic slaveholders, containing within itself the elements of its own destruction.

36. Should the malcontents in South Carolina be mad enough to execute their threats of resisting the tariff laws as they exist, or may be modified, it will become the duty of the Executive to resort to military coercion for enforcing them. Compelled to submit, the discontented in other States at the south would in her fate read their own, should they imitate her example, and would remain quiet. But is she permitted to bid defiance to the authority of the Government with impunity, the spirit of insubordination and resistance would not be confined to her; the neighboring States would soon be infected with it.

37. The excise law under the administration of Washington was not less unpopular in Pennsylvania and the western parts of Virginia, than the protective tariff is at this time in South Carolina and others of the southern States. It was denounced as unconstitutional, unjust, and oppressive, by those who were opposed to it; and the discontents rose so high at length as to cause an insurrection in the former State. And it is remarkable that one who has lately ranged himself on the side of the southern advocates of free trade in opposition to the interests of a people who so long cherished him, was suspected of fomenting the insurrection. The father of his country perceived the danger of the crisis, and did not shrink from the responsibility attached to the executive trust he held. He acted with the promptitude, decision, and energy, which the occasion required, by calling out the militia, and quelling the insurgents; after which there

## DOCUMENT 20—Continued.

was no more trouble in enforcing the excise law. Indications of resistance to federal authority in Pennsylvania, under the administrations of Mr. Adams, the elder, and Mr. Madison, (under the latter by the Executive of the State) were also manifested, and speedily suppressed in both cases.

38. From the preceding historical detail, it will be seen that, on three several occasions, the citizens, or constituted authorities of Pennsylvania, have resisted, or made a show of resisting, the authority of the Federal Government, and have as often been reduced to submission by the arm of the Federal Executive stretched out against them. Let the political fanatics in South Carolina, who, by constantly declaiming against the alleged unconstitutionality and injustice of the tariff laws, have done so much to excite the popular prejudice against them, and under *their exalted notions of State rights*, have so preposterously recommended nullification of the obnoxious statutes by State authority, as the rightful remedy; let these deluded fanatical agitators, I say, pause for a moment in their mad career, and take warning from what has happened in Pennsylvania. I would particularly recall to their remembrance the fate of Captain Tries, who figured at the head of the insurgents in that State, and who, for his active participation in the insurrection, was arrested, tried for his life on the charge of treason, convicted, and condemned to expiate his crime on a gibbet.

39. It will not be long, it is apprehended, before the public lands will become a subject of contention between the new States and the Federal Government. Indeed, the strife has already begun. There are citizens in those States who have advanced pretensions in their favor to the public lands contained within their limits, utterly incompatible with the rights of the United States. And should the majority, on the question of protection, succumb to the minority, what are now stated as pretensions by a few only of the wildest among the western politicians, will be soon claimed as rights by the people generally in that section of the Union. Many plausible reasons will be urged in support of these claims, first and foremost of which will be State sovereignty. There being a moral certainty, after the national debt shall have been discharged, the aboriginal title to the public lands extinguished, and the western people thereby relieved from further apprehension from the Indians, that they will assume a new and more imposing attitude in relation to this great national concern, it is incumbent on the majority to display unshaken firmness in meeting and putting down the opposition of the southern minority in the present controversy. *To doubt its own strength to enforce its own will, would prove fatal to its authority.* It would be an indication of weakness that would be equivalent to an absolute surrender, and the evils that would result from it would be infinitely greater than those attending a prompt, energetic exertion executing its rightful powers; as the one would be of a temporary, circumscribed nature, the other perpetual and indefinite in their extent.

40. In asking a reduction of the duties on protected articles, the pretext of the southerners is to favor consumers, but the real object to prostrate domestic manufactures. In proportion to the degree in which they flourish under legislative patronage, the importation of British competing wares exchanged for their staples is prevented. Hence their hostility to manufacturing establishments; hence its extension also to internal improvements. They want the revenue razed to the lowest point the current expenses of the Government will allow, that no aid may be afforded to either the one or the other. In their prejudices against manufactures, it is to be observed, that they differ from their oracle in political economy, Adam Smith, who admits their importance to agriculture, though will not allow them to be encouraged by commercial restrictions. He says: "Whatever tends to diminish in any country the number of artificers and manufacturers, tends to diminish the home market, the most important of all markets for the rude produce of the land, and thereby still further to discourage agriculture." As consumers, the abolition of the duties on unprotected wares would relieve them in the same manner as the reduction of them on imports generally, protected and unprotected, would do. A sufficient diminution of the revenue would not, however, be effected by the proposed abolition, to answer their views; under it there might be a surplus of three millions, or more, which they would sooner see thrown into the sea than applied to any object that would promote the national welfare. Moreover, they object to any abolition of the impost on unprotected articles, some of which are denominated luxuries, and not reducing it on those which are protected: such, for example, as the coarser cotton and woollen cloths that are said to be, and really are, necessities, because they allege it would be favoring the rich, and doing nothing to relieve the poor. In answer to the objection, it may be said that articles of foreign merchandise imported without meeting domestic competition, are not to be expected, because the duties have been taken off them, to decline correspondently in cost for as much as the removal of the impost being known in foreign countries, a higher price might be demanded; or, if that should not be done, the importer might, to enhance his profits, vend them at nearly their antecedent prices. Be this as it may, those wares which find rivals in similar productions of the country, will undergo the greatest diminution in cost.

41. Sound reasons may, in my estimation, be urged why the revenue should not be reduced, at this time, below, \$18,000,000. Considering the threatening aspect of things at the south, and the unsettled condition of Europe, it would, I think, be imprudent to put the reduction below that amount. It is not known what a year may bring forth: It is not known what calls there may be for money either to avert evil or to achieve good. It would be unwise, therefore, not to provide a revenue sufficiently liberal not only to meet the current annual expenses of the Government, but to allow something for other objects connected with the national welfare, and to be prepared at all times for emergencies not anticipated, whatever they may be. But if we are to be relieved of a surplus so much dreaded by the southerners, and the danger of a deficit in the revenue is to be incurred, then I would do what they would less approve than leaving untouched the protective duties. I would, from and after a specified day, prohibit the importation of foreign fabrics, the rivals of such domestic manufactures as have reached the point of fully supplying (or nearly so) the wants of the country. Indeed, whenever a manufacture has arrived at, or approximated, a plenary supply of the domestic demand, its importation ought, as in other countries, to be interdicted, or the duty raised so high as to amount to a prohibition. The United States and their territories, with their present numerous and rapidly increasing population, would afford a field sufficiently extensive, in all reason, for competition, after the foreign is withdrawn. On this point no doubts should be entertained. That I am right in so saying, I have only to adduce for proof the low prices of the productions in foreign countries that have secured to *their own people their own markets*, by prohibitory laws. Great Britain, France, Holland, Germany, and Russia, have all guarded in this way the industry of their people, and such of them as have at any time discontinued the prohibitory policy, have been obliged to return to it.

42. There can be no question that some of the tariff provisions intended for protection are susceptible of improvement. There has always been, and ever will be, opposition, more or less, to a bill of that description when introduced in Congress. This was eminently the case in 1823, when the tariff was revised and altered for the purpose of extending more efficient protection to such branches of domestic industry as needed it. Its enemies assailed it with unusual rancor, and, among its professed friends, there were some wrong-headed and some treacherous men, who united with its enemies in deteriorating its character. With its defects, such as they are, it has, nevertheless, been instrumental in doing much good. The manufacturers have arranged their business so as to suit its provisions, and would, it is believed, with some new enactments to secure a more effectual execution of it, be willing to let it remain as it is, rather than run the risk of having it made worse by a revision. This, however, cannot be avoided. The revenue must be brought down to the measure of the national exigencies under the altered state of things. But, in adjusting the tariff with a view to that end, it would, in my judgment, be best that the reduction should be gradual, not too sudden and too great at once. And in fixing ultimately the amount of revenue to be raised, it should not be marked by an improvident, ill-judged parsimony, that might, in unforeseen circumstances, endanger the public safety and welfare. In the adjustment, the protective principle, instead of being legislated away in concession and compromise, (for which there is reason to fear some of its friends are prepared) ought to be retained, and its efficiency strengthened, if necessary, by new provisions.

43. The valuation hereafter of imported goods in America, not in foreign ports whence exported, and the substitution of cash payments for the long credits on duties granted to importers, should they be determined on, would go far towards improving the condition of the manufacturers; and, in meliorating their condition, let it not be supposed that *they only* will be benefitted. The cultivators of the soil, the mechanics, and artisans, I repeat, will be benefitted; the proprietors of divers kinds of sands, earthen, and minerals, will be benefitted; the men, women, and children in the factories will be benefitted; the miners, quarriers, wagoners, wood-choppers, and laborers, occasionally wanted at these establishments, will be benefitted; the interests of commerce and navigation will be promoted, and the wealth, power, and independence of the nation augmented.

44. So far from being monopolists of the advantages produced by the protection afforded them, the manufacturers, in comparison of the great number and variety of classes whose interests are promoted by it, share but a small portion, and that always attended with more or less risk and uncertainty, whereas the benefits derived by others are positive and certain. The truth of this is too apparent to be denied by any but interested foreigners, and those of our own citizens who are either under the influence of foreign connexions, or whose minds, in the absence of useful practical knowledge, have been perverted by false theories, and erroneous views of their own and their country's interests created thereby.

45. The manufacturers are not unreasonable in what they require. They wish not the gains of other classes of citizens to be transferred to them; nor have they, as alleged, *been so transferred*. The reverse of this is the fact. They (the manufacturers) have, from the encouragement given them by the Government, been the authors of much good to the community, with

## DOCUMENT 20—Continued.

very little participation in it themselves, as just stated. They ask not for a continuation of protection under the expectation of high prices for the products of their industry and skill. Past experience has admonished them sufficiently on that point. Each successive tariff has been followed by a further declension of prices. They will be content with moderate gains, if rendered certain by the American markets being secured to them. They want protective duties, not to enhance the prices of their fabrics, but to prevent foreigners from disgorging on our shores productions of similar kinds to theirs, to the great injury of themselves and the rest of the community. The strife in which they are engaged with foreign manufacturers is, with all the legislative aids that have been extended to them, hazardous and unequal. The foreign manufacturer, having full possession of his own market, vends at a living price much the greater part of his wares at home, and what he can't dispose of there is sent here, fraudulently entered, in many cases, at the custom-houses, and then sold at auction for the best price it will bring in ready money. Just so much of domestic goods as his sales amount to is driven out of their own market, to the prejudice of the American manufacturer, who, unlike his foreign competitor, has not other markets besides the one at home on which he can rely for the disposal of his wares.

46. A remark or two more on the subject of concession in modifying the tariff may, on account of its importance, be excused, before this communication is brought to a close. Concession or a remission of right, productive of no immediate bad consequences, was, in a few instances, made in the Federal Convention, when a constitution was to be formed. The case is now very different. A surrender of their interests is asked from the majority, which would be suicidal. The reduction of a system of protection extended to the various branches of domestic industry, commenced so early and continued so long as to have become the settled policy of the Government, is demanded by the minority, and demanded in a tone of bullying and menace that should cause it to be utterly disregarded. I do not mean to say that the insulting menacing conduct of the minority has released the majority from the obligation of doing what is right. They are morally and politically bound to do; and, having so done, they are then to look for acquiescence in their will, as manifested by their acts, from the minority.

47. I will remark further, that concession, at the time the constitution was framed, was made under very different circumstances from those in which it is now asked. Then the Government was merely nominal, a shadow without a substance, and the affairs of the Union, from the want of power in the Government, had fallen into the greatest disorder. But now there is a well organized Government, the powers of which require only to be wisely and fearlessly wielded by the majority, to secure the ends of its institution.

48. Much as the people of the United States are addicted to the love of peace, it is not to be expected that war can always be avoided. The millenium has not yet arrived. Causes of war will be occasionally given by foreign nations, which, if not removed by negotiation, must end in appeals to the sword. Disobedience to the authority of the Government by a part of the people, or of the States, is also to be looked for sometimes, and, whenever it occurs, ought to be immediately repressed, or all respect for the Government will be destroyed; the certain consequence of which would be a cessation in the exercise of its powers. The time, in my opinion, is near at hand when these powers are to be put to the test. South Carolina, in the conduct of her Governor, her Legislature, her Representatives in Congress, and a large part of her people, has shown a disposition to bid defiance to the Government, should not the majority yield to her demands. This cannot be done without violating the rights and sacrificing the interests of the community. The Government, therefore, in the event of resistance, has no other alternative but, by the promptitude and energy of its action, to punish those misguided citizens who may be found in rebellious opposition to its laws, and to coerce the State to which they belong, and under the sanction of whose authorities they shall act, to return to its duty.

I have the honor to be, with great respect, your obedient servant,

ANDREW GRAY.

HON. LOUIS McLANE.
